FARM AND AGRICULTURAL NOTES.

Nearly 700 bushels of onions per acre were raised last year by George O. Mason of Beverly, Mass. An average two or three year-old steer will eat its own weight of different material in two weeks. There is no loss in feeding cattle well upon a variety of materials for the sake of the manure alone. Samples of white Russian oats, six feet high, with heads eighteen inches long, have been left at the office of the Indiana Farmer. American methods of conducting many departments of agriculture are being introduced into nearly all parts of the civilized world. The American wonder or premium Gemma, sown in August, will, if they escape mildew, make a fair Autumn crop. In some instances "sprinkling lawns with carbolic acid and water" has been practiced against the army worm in Connecticut with good result. The crop of small fruit is excellent in nearly all of the Eastern States. The markets are well supplied and large quantities are being canned. It is not generally known that a few sprigs of cedar grass, mixed with hay, or any kind of litter for hen's nests, will keep them entirely free from hen lice. Two or three year old cattle will add one-third of a pound more per day to their weight upon prepared hay and roots than upon the same materials unprepared. The West now surpasses the East in the excellence of its butter and cheese factories. The largest combined factory in the world, it is said, is located at Tremont, N.H. A correspondent of the Farmer's Review has found a strong decoction of tansy, applied through the fine rose of a watering pot, very effective against the cabbage worm. The United States is becoming, if it has not already become, the first wool-producing country in the world. If it is second, it is second only to Australia, of which wool is the largest product. Very frequent news items about ghostly deaths from going by bulls preach offensive sermons against horns, and against careless approaches to these generally mismanaged and treacherous beasts. More labor saving machines for doing work in fields and gardens have been imported in the United States than in all other countries combined, and these are fast finding their way into all parts of the world. The general effect of lime is to render available the plant food already in the soil, without itself supplying any significant amount. Lining cannot, therefore, be successfully repeated except at considerable intervals. There is no wisdom in working a thirty acre field year after year to get five bushels of wheat or ten bushels of corn to the acre, when with the same expense for fertilizers you could raise fifteen bushels of wheat and thirty bushels of corn to the acre. Farmers and property owners should bear in mind that they are required by law to cut Canada thistles on their land before they go to seed. They are liable for the neglect, and the complainant is entitled to part of the fine. The Gardener's Monthly says: "Let the laundry folks, on every wash day, pour the boiling hot soap suds about the roots of the peach trees. This will destroy the insidious little fungus which produces the 'yellow', and other diseases, and finish the larva of insects which are so injurious to the trees."

ST. BERNARD DOGS.—A variety is given to the little stork immediately adjoining the college and abbey by the frequent appearance of a couple of monks, accompanied by a dozen or more splendid specimens of the St. Bernard mastiff. The race of the fine dog is kept vigorous and pure, though a number of animals which have evident strains of other blood. In fact, excepting from the monastery itself, the Valaisans say you cannot procure a thoroughbred dog—and not always even then. Their peculiar training for the assistance of wayfarers begins, of course, only on the mountains, and it was from the monastery of Wales obtained, when passing there, the fine canine specimens which are the ornaments of his princely kennel at Sandringham. These dogs are fed three times a day with vegetable and animal food. The Christian dog here, contrary to some "dogs of Christians," elsewhere, observes the monastic regime, and is observed on fast days and on days of abstinence, in his food. Next to London joint stock companies, I never saw canine creatures with so much "limited liability." There are about two hundred dogs held in training orders for the final lessons in humanitarian seeking and finding on St. Bernard's bleak top. These dogs have most attractive names and respond to them as intelligently as a corporal's guard on roll-call. A sort of stud book is kept, which, for its detail and accuracy, would draw tears of envy from the racing authorities at Newmarket, and which I took over with an interest in dog pedigrees that would amaze and amuse a Darwin in a Herald's college. I may mention, on the subject of dogs, and their sense of smell, that it is keener than in dogs of smaller and more domestic type. It is by the smell they are guided in their chief works. A dog deprived of smelling power ceases to be a dog. Schiff, in his treatise on dogs and faculties, says the dog, with its loss of smell, loses its faculty of attachment and faithfulness towards its master, whom it recognizes and loves simply on account of his "individual perfume." He caused some dogs to be deodorized, and forever after they forgot their cunning and knew no master he ever so kind. The olfactory nerve in the Mount St. Bernard mastiff is particularly large, liberally containing sinuses for increasing the olfactory surface, and you do not discover it so developed in small dogs. GRAFTING WAX.—A reader writes us for a recipe for making grafting wax that will not melt in summer nor crack in winter. Replying, we would say that three parts resin, three parts beeswax, and two parts tallow, will make an excellent grafting wax. A cheaper wax that has given us good satisfaction is made by melting together four parts good, clean resin, two parts beeswax, and one part tallow. When the ingredients are all melted and mixed, pour into a pan of cold water, when the wax will harden sufficiently to be worked and pulled, as it is working molasses candy. If used in cool weather it will be necessary to keep in warm water; and hot water cold water will be needed. For cursory grafting, this wax is sometimes melted and spread on narrow strips of cloth which are wound around the graft. —Farm Herald.

MAKING FENCE-POSTS LAST.—A Western farmer says that he has discovered a mode by which the part of fence-posts buried in the ground can be made to last longer than iron. Time and weather soon take their toll, but a mixture can be prepared for less than two cents apiece. The recipe is to take boiled lard and stir in pulverized charcoal to the consistency of cream, and apply a coat of it to the lower half of the post a few days before setting. Hearty Recommended. Don't condemn a good thing because you have been deceived by worthless nostrums. Parker's Ginger Tonic has cured many in this section of nervous disorders, and we recommend it heartily to such sufferers. —News.

PHILADELPHIA SINGER MACHINE

Equal to any Singer in the World. The people, who the undersigned are aware of, have given their verdict in favor of the Singer Sewing Machine. It is the best and most reliable of all sewing machines.

General Proclamation Election

God Save the Commonwealth!
WHEREAS, by an Act of the General Assembly of the Commonwealth of Pennsylvania, passed at Harrisburg, on the 21st day of March, 1882, it is enacted, that the next general election shall be held on the 7th day of November, A. D. 1882, (the same being the Tuesday next following the first Monday of said month,) at which time State and County officers will be chosen as follows: One person for the office of Governor of Pennsylvania; One person for the office of Lieutenant Governor of Pennsylvania; One person for the office of Secretary of Internal Affairs of Pennsylvania; One person for the office of Judge of the Supreme Court of Pennsylvania; One person for the office of Comptroller of the Treasury; One person for the office of Commissioner of Agriculture; One person for the office of Sheriff of Cambria County; One person for the office of Paor House Director of Cambria County; One person for the office of Jury Commissioner of Cambria County; One person for the office of Coroner of Cambria County. The names of the persons to be elected shall be placed on the ballot by the electors of each township, and the electors of each township shall meet at the school house in said township, on the 7th day of November, A. D. 1882, at 10 o'clock in the forenoon, to receive the ballots and to count the same, and to declare the result of the election. The electors of each township shall meet at the school house in said township, on the 7th day of November, A. D. 1882, at 10 o'clock in the forenoon, to receive the ballots and to count the same, and to declare the result of the election. The electors of each township shall meet at the school house in said township, on the 7th day of November, A. D. 1882, at 10 o'clock in the forenoon, to receive the ballots and to count the same, and to declare the result of the election.

THE ELECTIONS OF THE DISTRICTS OF CAMBRIA COUNTY. The electors of the district composed of the township of Adams to meet at the school house in said township, on the 7th day of November, A. D. 1882, at 10 o'clock in the forenoon, to receive the ballots and to count the same, and to declare the result of the election. The electors of the district composed of the township of Armstrong to meet at the school house in said township, on the 7th day of November, A. D. 1882, at 10 o'clock in the forenoon, to receive the ballots and to count the same, and to declare the result of the election. The electors of the district composed of the township of Bedford to meet at the school house in said township, on the 7th day of November, A. D. 1882, at 10 o'clock in the forenoon, to receive the ballots and to count the same, and to declare the result of the election. The electors of the district composed of the township of Berks to meet at the school house in said township, on the 7th day of November, A. D. 1882, at 10 o'clock in the forenoon, to receive the ballots and to count the same, and to declare the result of the election. The electors of the district composed of the township of Berks to meet at the school house in said township, on the 7th day of November, A. D. 1882, at 10 o'clock in the forenoon, to receive the ballots and to count the same, and to declare the result of the election.
