The object is to get the milk before the turning have been in the stomach long enough for their odor to be absorbed and get into the milk, and also feed the furniss long enough before the next milking to get rid of all the odor through the skin and the excretions. It is clear that these objects are most readily reached by feeding the turnips immediately before milking, aland of very little account if the feeding is done as soon as the milking is fin-

How to Keep an flechard in Condition.

An orchard may be kept in rood condition with a much less amount of fertilizer if the crop of grass is left in decay on the land; when this is done, as the grass is fully grown a heavy mier should be run over it this deaves a clean, soft surface for the fruit to drop on. But in most localities there is too much risk of fire to leave the grass day in an orchard; were it not for this danger, there are many orchards it would economy to let the grass decay under the trees, for by so doing it keeps the The Will of the People soil light and loose, and at the same time cool and moist. It also thins out the grass roots and makes the grass come up so thin that it in erferes very little with the growth of the trees.

THE famous system of rotation now quite general throughout England and Scotland is as follows: The first year, clover and mixed grass seed; the second year, wheat; the third year, turnips or rutabagas; the fourth year lar'ev, and then the same coarse again. Another innovation is to add another grain crop. oats, making a five year course, and so efficient has this course been that it is calculated that the grain crops have increased one fourth.

IF A cow is a deep milker and not inclined to dry off before calving time, do not seek to shrink the milk suddenly, either by crasing to milk her or by staryation. Neither should she be physiced or her udder bathed in astringent washes as this has the effect to throw the milk base on the blood, causing congestion, inflammation and complications. Give dry food, melading plenty of bran, and milk her much laking, but a month before her malving time feed the milk to

In Ceylon the native Health Renewer." Goes direct to weak spots. life for most men. Whoever would keep elephant which was formerly thought their mouth must fight the absorbing to be larger than the African animal, is rarely more than nine feet; and Sir Emerson Tencent in his celebrated work on the natural history of that island says that in the districts where to their ears; the effect of precepts is the hunters agree that the largest specitherefore slow and tedious, while that mens are to be found, "the tallest of ordinary herds do not average more than eight feet."

In India the same tendency to exaggeration prevails. Dr. Falchner was Children, slow in development, puny, scrawny and delicate use "Wells" Health Renewor." authority for the statement by Professor Ansted more than a quarter of a century ago that "out of eleven hundred \$1. elephants from which the tallest were selected and measured with care, on ante one occasion in India, there was not are to a painting; she gives to it strength one whose height measured eleven feet." At the present day probably no man is Din better qualified to speak with reference to the size of Indian elephants as Mr. G. P. Sanderson, the officer in charge of the elephant-catching establishment TWO maintained by the British Government at Mysore, He does not believe that there is an elephant in India ten feet at the shoulder. He has measured a great many, and the tailest was nine feet ten inches. "The next largest are two tuskers belonging to his highness the

Maharajah of of Mysore, each nine feet make a two-legged animal a man with- eight inches, captured in Mysore some forty years ago, and still alive." Mr. Sanderson in his very entertaining work on the wild beasts of India, says that twice round an elephant's foot is his not, whether he or any other gathers erally this measurement will give the exact stature, but when persons unfamiliar with elephants are asked to guess how many times the circumference of the foot must be multipled to ascertain Mr. Ingenius Workhard has perform- how tall the unimal is, they say from ten

Not only may we reasonably conclude from every thoughtful citizen. Of that Jumbo was the largest land animal cours, he will not receive one from in the world, or, at all events, without any superior in size, but it is safe to say that a much larger walking beast could not be made out of skin and bones. sessor of a good fat hen, which, like order to support a heavier creature, the legs, even with practically solid bones, would have to be so increased as render progression impossible.

These considerations indicate that we shall never see a larger land animal than Jumbo, - N. Y. Sun,
