

AGRICULTURAL DEPARTMENT.

Summer squash will endure cold and can be planted early.

Beans, cucumbers and potatoes, once seriously cut by the frost, will not make a satisfactory growth.

Plant the first sweet corn rather shallow; the sun will warm and cause quicker sprouting than if deep.

Cucumbers can be planted under some slight protection and make a gain of two weeks over those planted later.

The early six weeks' bean is more hardy and will sprout and grow in a lower temperature than the wax beans or the Lima.

Judicious use of even a small quantity of glass for early plants will make a great difference in the earliness of the garden.

To guard against loss by frost a succession of all crops especially liable to injury should be planted.

If you have an old grapevine that yields poorly and has scented best days, cut it entirely off close to the ground.

Manure heavily and let it throw up two new leaders, and the following year you will see that it is as good as a young vine.

Professor E. M. Shelton considers thirty loads of manure applied to one acre equal to forty spread over twice as much surface, and bases the idea on reasons similar to those employed in proving large crops more profitable than small ones.

A correspondent of the Canadian Horticulturist says his Flemish beauty pear trees showed signs of blight, probably caused by vigorous growth and heavy bearing.

He gave the trees a heavy dressing of wood ashes and copious, and they entirely recovered and bore fruit.

To prevent the splitting or bursting of cabbages, J. H. Gregory recommends to go frequently over the ground and start every cabbage that appears to be to mature, by pushing them over sideways. Heads thus started are said to grow double the size they had attained when about to burst.

The rule about feeding hens varies with the breed. The Asiatic varieties are easily overfed, especially with corn, grow fat, lay but few eggs and work off their fat only by sitting.

Leghorns and other non sitters are scarcely to be fed too much if given slowly, and so the hens are compelled to search for it.

Seeds of tomato planted where the plants are to stand will be nearly as early as those raised under glass. Beets will not suffer even if the ground should freeze a little.

Onions planted as soon as the ground is dry are safe for crop; they endure a low temperature. Cabbage and all of that family are quite hardy.

Seeds of lettuce germinate at a low temperature. Pepper and egg plants must have heat to do well; they fall to sprout in a cold soil.

A chicken, if properly treated, should continue to grow without interruption from the time it is hatched until it is fully matured. The most common cause of stunted chickens is not want of food, as might be supposed, but is usually owing to unsuitable quarters in which they are kept, and which are either filthy, cold or damp, if not positively wet.

This condition of things breeds disease and lice, which alone would stop their growth, if, indeed, it did not stop their health.

A correspondent of the National Stockman advises that much of the success of turkey raising depends on the manner the eggs are gathered, and says: "In the early Spring months the eggs should never be allowed to remain in the nest until cold. Have a basket lined with soft cloth, take it to the nest at the time of day the hens are about through with laying, and remove the eggs gently with the hand. Have the hand dry, clean, and free from grease.

Many persons keep a clean, soft mitten in the egg basket, to be used only when removing eggs from the nest. Too much care cannot be used in handling eggs for sitting purposes. Cover the eggs with a soft cloth to carry them to the house. Keep them in baskets, with soft cloth under and over them, in the room where they cannot chill at night; turn them two or three times during the week. Many people complain that their eggs hatch poorly, when the cause of it lies with them not using care enough in gathering them."

Perhaps it is not generally known that barley (like the pine tree) grows all over the world. It is grown alike in Arabia and Norway, and it will vegetate and grow at a lower temperature than any other small grain. It never blights or rusts, and will make something on almost any kind of land and under any circumstances, though good rich, dry soil suits it best. It is fine feed for horses and mules, and when cut before it is fully ripe the straw is equal to the best Northern hay.

The editor of the Farm, Field, and Fireside says: We have realized as much as five dollars from a single hen, and as the hen was valued at only fifty cents, the gross sum derived was equal to one thousand per cent.

Most purchasers of trees want the latest size. This is nearly as foolish as was the man who went to the shoe store and called for the biggest pair of boots that could be got for \$5.

Young trees always have most root in proportion to top, will grow fastest and will come soonest into bearing, other things being equal.

When butter is properly churned, both as to the time and temperature, it becomes firm with a very little working, and it is tenacious; but its most desirable state is waxy, when it is easily moulded into any shape, and may be drawn out considerable length without breaking. It is then styled gild edged. It is only in this state that butter possesses that rich, nutty flavor and smell, which imparts so high a degree of pleasure in eating it, and which increases its value manifold. It is not always necessary, when it smells sweet, to taste butter in judging it. The smooth unctuous feeling in rubbing a little between the finger and thumb expresses at once its rich quality; the nutty smell and rich aroma indicates a similar taste; and the bright golden, glistening, cream-colored surface shows its height of cleanliness. It may be necessary at times to use the strainer, or even use it until you become an expert in testing by taste, smell and robbing.

Stimulants.

The following beautiful lines were written by George D. Prentice. They first appeared in Louisville Journal thirty years ago.

"There is a time when the pulse lies low in the bosom, and beats low in the veins; when the spirits sleep the sleep which apparently knows no waking; slow as the home of clay, and the windows are shut; the doors hung with the invisible crape of Melancholy; when we wish the golden sunshine pitchy darkness and wish to fancy clouds where no clouds be. This is a state of sickness when physic may be thrown to the dogs, for we want none of it? What shall raise the spirit? What shall make the heart beat music again and the pulses throng through all the myriad thronged halls in the house of life? What shall make the sun kiss the eastern hills again for us with all his old awakening glance, and the night overflow with moonlight, love and flowers? Love itself is the greatest stimulant, the most intoxicating of all and performs all these and, is a miracle still, and it is not at the drug store, whatever they say. The counterfeiter is in the market, but the winged God is not a moneychanger, we assure you.

"Men have had many things, but still they ask stimulant.

"Men try to bury the floating dead of their own souls in the wine cup, but the corpse rises. We see their faces in the bubbles. The intoxicant of drink sets the world whirling again and the pulses of playing music and the thoughts galloping, but the clock round down sooner, and an unnatural stimulant only leaves a house full with the wildest revelry, more silent, more sad, more deserted.

There is only one stimulant that never intoxicates, duty. Duty puts a clear sky over every man into which the skylark of happiness always goes singing."

Signs of a Storm.

There are many ways of predicting rain. Every farmer knows when swallows fly low that rain is coming; sailors, when the gulls fly towards the land, when stormy petrel appears, or Mother Carey's chickens, as they are called, predict foul weather. Take the ants; have you ever noticed the activity they display before a storm—hurry, scurry, rustling hither and yon, as if they were letter carriers making six trips a day, or expressmen behind a dog's legs, or running sleepily and dull, and like to lie before a fire as rain approaches, chickens pick up pebbles, fowls roll in the dust flies sting and bite more viciously, frogs croak more clamorously, gnats assemble under trees and horses gallop restlessness.

When you see a swan flying against the wind, spiders crawling on a wall, toads coming out of their holes in unusual numbers of an evening, worms, snails and snails appearing, robin redbreasts picking at our windows, pigeons coming to the dovecote earlier than usual, peacocks squalling at night, mice squeaking or geese washing, you can put them down as rain signs. Nearly all animals have some way of telling the weather in advance. It may be that the altered condition of the atmosphere with regard to electricity, which generally accompanies changes of the weather, makes them feel disagreeable or pleasant. The fact that a cat lies herself before a storm is urged by some naturalists as proof of the special influence of electricity. Man is not so sensitive. Yet many feel listless before a storm, to say nothing of aggravated headaches, toothaches, rheumatic pains, and last, but not least, corns.

Sun Spots and Magnetic Storms.

Professor Schuster, the English Astronomer, in a recent lecture at Manchester, thus spoke of sun spots: "Sun spots were seldom seen at the poles, and seldom near the equator, though sometimes seen at both. We were never able to see a long protracted absence of sun spots rapidly approaching their maximum, which would probably be reached in few months, and then there would be more than three or four times during the week. Many people complain that their eggs hatch poorly, when the cause of it lies with them not using care enough in gathering them."

SELLERS LIVER PILLS. A very interesting and profitable business opportunity for all who are looking for a new and profitable investment.

The Cyclone Cellar. A number of persons in this town are building cyclone cellars—underground retreats upholstered with large lime-stone rocks into which they can crawl when a cyclone may happen to be going through the country.

It may not look as heroic to go into a cyclone cellar every night and set the time lock on the door for nine o'clock the next morning as it does to stay above ground and fasten a notice to each limb saying that "this belongs to So-and-so, the finder will please return," but it certainly will produce a greater peace of mind.
