The fellow that is hard up is apt to become a man of note.  
Many a widow's weeds are written by the simple phrase, "Wilt thou?"  
Why does the ocean get angry? Because it has been crossed too often.  
The cockroach is always wrong when he attempts to argue with a chicken.  
If a young man feels that his life is a blank he should try to fill it out and have it sworn to.  
It doesn't matter how tough a young man may be, a good looking girl is very likely to break him up.

Mrs. Partington claims that there are few people nowadays who suffer from "suggestion of the brain."  
When an Arab of the desert wants to inquire if his sister is going to leave home for a while he says, "Are you going oases?"  
When you are at sea and ask a man at the wheel how she heads, and he tells you, "Sou'-sou'-east-by-sou," you get all the news there is in a small compass.

"Mable, I have something to say that I think will astonish you." "What is it, Harry?" "I am going away." "O, Harry, you are always getting up some new surprise for me."  
Visitor: Your new house is very pretty; but you will have trouble to do anything with the garden, it's so small, but, then, I shall put in feeding-beds."  
A hotel located in the West, is being advertised as follows: "There is no gilt-edge business about this house, and if you want to eat pie with a knife you can do it without fear of being ostracized from society."

The pitcher had a little ball, and it was white as snow, and where the striker thought it was that ball it wouldn't go. It had a sudden in-shoot curve, it had a fearful drop, and when the striker wildly struck, that ball it didn't stop. "Why does the ball fool strikers so?" the children all did cry. "The pitcher twirls the ball you know," the teacher did reply.

**Bread Baking.**

A barrel of good flour should make from 270 to 285 five cent loaves. Many bakers blend four brands, as two Minnesota Springs and two Indiana Winters, before they get the right alloy. Others use only one grade of spring and two of winter wheat. These make the best brands of fancy bread. Formerly yeast was made of malt, potatoes and hops, and this is extensively used. Fancy bread bakers use a patent yeast compressed yeast. It is popularly supposed that bakers use alum extensively in order to whiten their bread. That is not the fact. There is no necessity for the use of alum, and it is not used in the trade. There are about twenty large steam bakeries in New York, which give employment to several hundred men. One of these, a noted Broadway establishment, makes a specialty of Vienna bread and does an immense business. Vienna bread is made in air tight ovens, of the best grade of flour, and milk is used instead of water. It is made in a bulb of water. The steam sets back on the bread the steam sets back on the bread instead of evaporating. This makes the outer crust thin and tender, and gives the bread a peculiar rich taste and pleasant aroma. What is known to the trade as "steam" bread is another recent invention. It is made of the very finest of flour and baked in air-tight pans, which inclose it on all sides. It is thus baked in its own steam, and possesses a flavor peculiarly its own. One very large bakery in New York is devoted solely to the production of ruffled bread. It is a steam factory, and the bread so made is extremely light and spongy. The invention is an English one, but has been in use here for years. When the dough has reached a certain consistency, it is run into an air-tight cylinder and strongly impregnated with carbonic acid gas. This creates the lightness and sponginess without detracting in the slightest from its nutritious qualities.

**How Ink is Made.**

Ink is variously composed, according to the purposes to which it is to be applied. Common writing ink is the peroxide of iron, mixed with a little gallic acid, held in suspension in water by gum or some other adhering substance. The gum also preserves the ink from being too fluid and also serves to protect the vegetable matter from decomposition.

Blue ink has of late years been much in demand. The coloring matter is said to be sulphate of indigo and tincture of iron, or according to another recipe, Prussian blue dissolved in water by means of oxalic acid. Red ink is usually made by boiling in the proportion of two ounces of Brazil wood in a pint of water for about a quarter of an hour, and adding a little gum and water. This ink is not in demand now, carmine having superseded it; this color is obtained by a solution of carmine and ammonia, also adding gum. The great merit of our common writing ink is in the freedom with which it flows from the pen, allowing of rapid writing, and the manner in which it bites into the paper, so as not to be removed by sponging. The great defect is in the want of durability. Such inks partake of the nature of dyes. The writing ink of the ancients, on the contrary, is characterized by great permanency; its basis was finely divided charcoal, mixed with some mucous or adhesive fluid. Indian ink is of this character; it is formed of lampblack and animal glue, with the addition of perumes, not necessary, however, to its use as ink, and is made up into cakes. It is used to color with a brush, both for writing and printing upon Chinese paper, and is used in this country for making drawings in black and white, the different depths of shade being produced by varying the dilution with water.

"Writing ink, is now made in large quantities in New York, and whereas in the past we used to import largely, we now export to almost every country.
