# How Alligators Eat.

It is a southern writer who compares an alligator's throat to an animated sewer. Everything, says this correspondent, which lodges in the open mouth goes down. He is a lazy dog. and instead of hunting something to eat he lets his victuals hunt for him. That is, he lies with his great mouth open, apparently dead like the possom. surprise to learn after a short greeting then several gnats and a colony of mosquitoes. The alligator don't close his mouth yet. He is waiting for a whole drove of things. He does his eating by wholesale. A little later a lizzard will cool himself under the shade of the upper jaw. Then a few frogs will hop up to catch the mosquitoes and gnats will alight on the frogs. Finally a whole village of insects and reptiles settle down for an afternoon picnic. Then all at once there is an earthquake. The jaw falls; the alligator blinks one eye, gulps down the entire menagerie, and opens his great front door again for

### Teach the Girls to Sew.

Who can say that the inventions the nineteenth century do not shee to be going ahead, pushing onward perfection ? Not only is this the in scientific matters, but in all bring pertaining to household work. Is particular, however, we are ground. Our daughters are not to the use of the needle, as were our gramothers in the good old times of w ago," for did they not fashing date beautiful garments, without the and the sewing machine, with its numer attachments, hemmer, ruffler, lackcorder and binder ? In "grandma's day" every rolling

hemmed, rolled, whipped and served by hand. In undergarments every may was neatly felled, every yard of flarwas (after being run together) als and evenly "catstepped," and withthis pretty finish was considered abgiing, unsightly piece of work. In many cases too much time and an sight were spent in beautifying adorning ladies underwear, Parite ly was this the case when days, was and even months were spent in claisately embroidering the chemise nightgown yoke so much in vors twenty and thirly years ago, ThisIt, sider a wanton waste of time, and no that Hamburg embroidery and work

trimming are so cheap and pretty the is no excuse for it. Neither do I condemn the use of a sewing machine, but I contend that : do good machine work it is almost pe essary for one to understand how too plain sewing. I think all mothe should begin by the time their dauge ters are ten years of age to teach then

diments of this branch of househout work. I am fully aware of the oblast tions urged by most mothers, maining want of time one the part of the men. er, want of time on the part of th child ; many times is a want of inclus tion on the part of both.

Do not let your child commencet soon on fancy and decorative work by give her a good foundation by a the ough drill in plain sewing while a young enough to be guided by our a anstruction. With this foundation a branches of ornamental will be compared atively easy.

General Boulanger has sold the manuseript of his book, "The German Invasion," for \$40,000. Six month ago, before he behame notorious, he could not have secured the tenth of that sum for it.

Miss Isabella Singer, daughter of the inventor and manufacturer of the Singer sewing machine, was married in Paris to the Duc de Cazes. She is nineteen years old and has an income of \$120.000.

The man who was convulsed with laughter at a woman trying to sharpen a pencil, was soon after trying to cut a paper pattern by the united efforts of a pair of seissors, his right hand, and two thirds of his tongue.

A clergyman relates that on one cecasion, after marrying a couple, an ervelope was handed to him, he of course supposing it contained the marriage fee. On opening it he found a allp of paper on which was written "We desire your prayers,"

Buffalo Bill has imported forty-six Sioux Indians for his show to fill the places of those who married into the Fuglish nobility during his European trip last summer. The new arrivas were glad to come East and gave son e very recherche dog roasts in honor of Buffalo Bill's agent who went out to Montaua to engage them.

Mortar Unit never Hardens.

An intelligent and practical builder states it as the result of his experience and observation that mortar in the interior of walls, especially if it be what is called "rich" mortar, is liable never to harden, but to retain its soft consistency even for centuries; but this can only he the case where the interior of the wall is hermetically sealed against the external air, which method both arrests evaporation and shuts off the chemical operations of the atmosphere. The fact has been stated that in England, not long ago, an architect dug into a stone wall 300 years old and of considerable thickness, and took from between the stones a quantity of mortar as soft as it must have been the first day the wall was built, and discoveries of the same character have been made in other places. It is also stated that the possibility of such an occurrence may be tested in a very easy way, namely, by putting some rich mortar into a ginss bottle hermetically realing it-the fact being that it will never become any harder than when it was put into it.

Preserving Eggs.

Any method which will keep the air from the inside of the shell will preserve eggs for a certain length of time. Eggs for packing should not be more than one

## Raising Calves.

FENCE. At the Charlton, N. Y., Farmers' Institute, Hon Josiah Shull, the Secretary of the New York State Dairymen's Association, said :

> The first five days after birth the calf should have the natural milk from its mother; then the milk becomes sufficiently mature for general use, which set to cream and skim in twelve hours ; warm the milk to a proper temperature and feed on average of four quarts at morning and four quarts at evening for twenty days ; then skim the milk after setting twenty-four hours, and feed a like quantity twenty days.

If the calf be raised in the fall or winter, which is becoming common, proceed in feeding in the same manner as in the spring months. Early cut and well cured hay before going to blossom comes next to the tender grass. It contains all the sweetness of the grass.

This period will bring the calf 45 days old. After this (45 days period) feed ten quarts of milk daily after the cream is taken off, till three (3) months old. When 25 days old (if reared in the spring) have a pasture of tender grass for it and a plentiful supply of good, pure water where the calves can have ready access. And in addition to the feed of milk place a small handful of How to Grow Tomatoes.

Because the generous nature of the the situation be open, warm and airy. The Major and his wives have long | When the fruit begins to set mulch

There is always pleasure in accumu-

### Not an Utter Failure.

lated power, but few pause to consider that it is only to be had through vigorous exertion. In one respect this sort of recompense is unique, for it may come not only with much success, but with much that is called failure. A man may find his friends disappointing him one by one ; he loses a position he supposed to be secure, or his business does not succeed ; perhaps his work, too, appears ineffectual, and his efforts seem lost. Yet even in all this crushing adversity, although he has failed in all he has tried to do, he may have succeeded in doing something else of which he had not thought, but which may be more important and enduring than that which he attempted to accomplish. If he has really tried hard and honestly he has gained wisdom and power and experience and caution, which will stand him in good stead in future exertions. This is a consolation seldom offered at times of trouble, yet it is a real one. There is no such thing as utter failure to one who has done his best.

Foolish spending is the father of poverty. Do not be ashamed of hard work.

A solution of pearlash in water three upon a fire, will extinguish it immed ately.
