One of the most interesting studies bearing upon this subject (of the relation of mind to matter) is found in observing the effects of high temperature upon different organizations. The nervous, sensitive, egotistic man, when the thermometer ranges among the nineties, is chiefly intent upon publishing his perpetual discomfort. Instead of sitting still and cooling his mind through work or general diversion, he moves busily about telling everybody how bot it is, with gestures and ejaculasions to match. He is a mental radiator, bent upon transmitting his own conditions to other minds, and, without intending it, that the most delicate stomach will bear. is generating his own discomfort within others.

On the other hand, the man of even temperament, of cool mind, avoids all mention of physical and thermal coadition on a hot day. His purpose is to get his mind as far away from them as possible. He hears his nervous friend fling down his pen or spade and declare in is too hot for work. To him congenial work is the very best means of keeping his attention away from physical discomfort. One feels comparatively cool in this man's presence. He is a partial refrigerator and transmits his own conditions.

The mere physical temperature of a man on a hot day is not the measure of discomfort. In this busy season hundreds of New England farmers toil in open fields in the hot sun in such excessive perspiration that hardly a dry thread is found on them through the day. But if one is accosted on the roadside and reminded that it is a terribly hot day, he will generally reply with true Yankee drollery that it is splendid weather for corn. The farmer's mine is on the hay and corn crops instead of the heat. His mind is kept cool by congenial labor and the promise of good crops.

What is true of man is true of beast. One of the most painful sights to a person of kind-heart is to see the distress of horses that pull the street cars on a scorching day. These animals receive the best care and treatment by the companies, and their muscular strength is not overtaxed so far as mere work is concerned. A horse doing the same work on a country road would not perspire much. It is the tremendous strain upon their nerves caused by constant fear of losing their feet on the smooth pavement when starting the car that chiefly induces their sweat and semitorture. Even with a horse it is the condition of mind that largely decides ts power to endure heat and work.

## Bottles Made of Paper.

An attempt, now being made on an extended scale to introduce bottles made of paper into this country, deserves some passing notice. The paper bottle industry has achieved considerable success in Chicago, and is gradually extending throughout the United States. Foremost among the advantages accruing from this new adaptation of paper is the fact that the bottles are unbreakable, while the cost at which they can be placed on the market is considerably lower than that of an article of the same size in glass, stoneware or tin. A great saving in weight is moreover effected, a desideratum of no small moment where cost of carriage of large numbers has to be taken into consideration, while the cost of packing is reduced to a minimum, for breaking in transit, which is a constant source of loss with glass bottles, is obviously impossible. Special machinery is employed in the manufacture of paper bottles. A long strip of paper of requisite thickness having been formed into a tube by bending around a circular "mandrel," is covered externally with an outer glazed sheet, bearing any printed labels to be employed; the tube is then cut into short lengths, to the ends of which are added bottoms, tops and necks of paper-or of wood if special strength is required-nothing further being necessary beyond pouring in and lining the anside with a composition which, on setting, will effectually resist the action of | Beautifully Illustrated. 25 cts., \$3 a Year. acids, spirits, inks, dyes, etc. The utilization of paper is constantly receiving new adaptations, a bare enumeration of which would constitute a formidable list, while enough has been said to demonstrate that the latest development of this material in the bottle making industry bids fair to hold not an unimportant part in the varied uses now ob tained from paper.

Grains of Gold.

Anger manages everything badly. Hear instructions and be wise, and refuse it not.

5% Responsible and energetic persons wanted to solicit subscriptions. Write at once for exclusive territory. Wherever the speech is corrupted, the mind is also.

A crowd afways thinks with its sympathy, never with its reason. An angry man is again angry with

himself when he returns to reason. Example is a dangerous lure; where the wasp got through the knat sticks

If anger is not restrained, it is frequently more hurtful to use than the injury that provokes it.

He submits himself to be seen through a microscope, who suffers himself to be caught in a passion.

There is a transcendent power in example. We reform others unconsciously when we take uprightly.

It is a good discretion not to make too much of any man at the first because

one cannot hold out that proportion. There is this good in real evils, they deliver us while they last from the pet-

ty despotism of all that were imaginary. A beloing word to one in trouble is often like a switch on a railroad trackbut one inch between wreck and smoothrolling prosperity.

Some people think black is the color of heaven, and that the more they can make their faces look like midnight. the more evidence they have of grace.

Officeorns should never be washed in hot soap-suds; they should first be washed clean with cold water, then rubbed dry with a cloth wet with railk. The same treatment applies to a stone or slate hearth.

IT is not necessary for a good flar to see a sea serpent. He car describe one from the old files.

March 16, 1886, 17,

A poor horse eats as much as a good one; scrub cattle as much as grades or thoroughbreds; morgrel poultry as much as grades or pure breeds. Then why keep inferiar stock?

It has been remarked that the farmers who best succeed in this country are those who devote their chief attention to some one product which is favored OUIETNERVES. by their special soil and climate.

Tomatoes trained to stakes give the sweetest fruit and remain in bearing longest, though many cultivators, who grow for size and quantity, believe they have the best results when growing them on the level ground.

A SPECIFIC FOR MALARIA. It is not important that a young calf should have whole milk, except during the first two or three days, while the cow's milk is unfit for other use. That skimmed and warmed to blood heat is better than whole milk after it has become cold.

"I got malaria in the Southern army and for a dozen years suffered from its debilitating effects. I was terribly run down when I heard of Kaskine, the new quinine, It helped me at cace. I gained 35 pounds. Have not had such good The value of any kind of farm stock is very largely determined by its feeding ers of a similar character from promthe first year of its life. Breeding inent individuals, which stamp Kaskine as a remedy of undoubted merit, will be sent or counts for much, though every successful breeder knows how greatly the Letters from the above persons, giving full character of a young animal is changed Kaskine can be taken without any special med-ical advice. Si a battle. Sold by all druggists, or sent by mail on receipt of price. by innutricious or improper food.

Don't break, but train the colt. Begin the lessons with the halter early, and let the education continue until you have a perfectly trained horse. Do not wean the colt too soon. Feed the dam and colt freely but with care. Corn should be used sparingly, as it is fat-producing. The colt will early learn to eat oats with the dam.

The most experienced shepherds advise that sheep should never be turned into a yard with cattle and other stock. Their timid nature makes them a prey to all other animals, and hence they should be guarded from harm. They are hooked about by the cattle, and playfully stamped upon by the horses and colts. Give them their own particular domain.

As corn cannot properly be given in very large porportion in the milk ration, it would be profitable to exchange a ton of corn for a ton of roller bran. If corn is to be fed to sheep, separately from the fodder, as sheep masticate more per' fectly than cattle, it would be better to feed shelled corn with bran. But for horses and cattle, corn should be ground and mixed with the coarse fod-

As far as chemistry can decide, the mineral ingredients of straw undergo no change by long or short contact with animal excrement. The rotting straw may, and probably does, absorb additional nitrogen, chlorine, and other volatile manural elements, either from the air, or from the manure in contact with it, and thus increase in value. The manurial elements of the straw itself cannot be changed.

One hog, kept to the age of one year, if furnished with suitable material, will convert a cartload per month into fertilizer which will produce a good crop of corn. Twelve loads per year multiplied by the number of hogs usually kept by our farmers would make sufficient fertilizing substance to grow the corn used by them; or, in other words, the hog would pay in manure its keeping. In this way we can afford to make pork at low prices, but in no other way can it be done without loss to the farmer.

The Story of "Annie Laurie."

The famous song that is sung by all singers of the present day, I am informed is a mystery as to the author. I was raised on the next farm to James Mauria, Annie Laurie's father. I was personally acquainted with both her and her father, and also with the author of the song. Knowing these facts, I have been requested by my friends to give the public the benefit of my knowledge, which I have consented to do. Annie Laurie was born in 1827, and was about seventeen years old when the incident occurred which gave rise to the song bearing her name. James Laurie, Annie's father, was a farmer,

who lived and owned a large farm called Thraglestown, in Demfriesbire, Scotland. He hired a great deal of help, and among those he employed was a man by the name of Wallace to act as foreman, and while in his employ Mr. Wallace fell in love with Annie Laurie, which fact her father soon learned, and forthwith discharged him. Trade for Ebensburg and Vi-He went to his home, which was in Maxwelton, and was taken sick the very night he reached there, and the next morning when Annie Laurie heard of it, she came to his bedside and waited on him until he died, and on his death bed he composed the song entitled "Annie Laurie."

A MAN who acquires the habit of giving away to depression is on the road to ruin. When trouble comes upon him, instead of rousing his faculties, he grows dull and his judgment becomes obscured, and he sinks in the slough of despair ; and, if anybody pulls him out by main force, and places him saf e on solid ground he stands dejected and discouraged, and is pretty sure to waste the means of help which have been given him. How different it is with the man who takes a cheery view of life even at its worst and faces every ill with unyielding pluck? He may be swept away by an overwhelming tide of misfortune but he bravely struggles for the shore, and is ever ready to make the most of the help that may be given him. A cheerful, hopeful, courageous disposition is an invaluable trait of character, and should be assidiously cultivated.

How Type is Made. It takes a great deal of work to make type. Every letter has to be handled by five persons after it is cast. The first thing done is cutting the letter on the end of a fine piece of steel, forming a punch. The punch is driven into a piece of polished copper, which makes the matrix. The matrix of the face of LAST OPPORTUNITY! the letter and the mold for the body of type are put into type casting machines. fed with melted metal, and the letters turned out one at a time, dropping from the machine like the ticking of a watch. A great deal of work is required in finisbing the type, and when at last they are apparently all right, each letter is examined under a microscope, and the ers to Los Angeles, San Diego and San Fre care defective ones are rejected.

all day.

Imagine her going off to her club, her sewing circle, her gossip with a neighbor, night after night, leaving you to sit alone in your solitary room-a married old bachelor. How would you like | 66 it? Why is not sauce for the goose sauce also for the gander? How does your life look to you when measured by

It is very common to find a lone and unprotected female "holding down a claim," as the Western phrase runs. The women of the East would look aghast at the prospect of living alone in a sod house for six months, miles from the nearest neighbor. Yet experience proves that the "unprotected" is much safer out on the lonely prairie than she would be in New York City. I never heard or read of a woman on a homestead receiving an insult at the handsof anybody. To be sure, they are always armed, and know how to handle a pistol, but they rarely have a more deadly use for it than the killing of a jack rabbit or a prairie dog. Such women complain more of loneliness than fear. For whatever charms solitude may have for the sage, it certainly has none for the fair sex, not even for our hardy Western representatives of it. Here is one of their ingenious ways of avoiding it : Two of them will locate on adjoining "quarters," and build their houses on the dividing line, so that while each house is on its occupant's claim, the two structures are practically one for the ladies to call on each other and discuss social topics. They are all provided with ponies, and think nothing of a horseback ride of fifteen or twenty miles, either for business or pleasure.

# A Sunshiny Wife.

# Forgot He Was Married.

A young man, who until recently had lived at the house of his father, married a few weeks ago and went to live in other apartments. Soon after, at the end of his day's work, he left the office. bought an evening paper and climbed the hill to his father's house. Entering the familiar precincts, he went to the wash-room, made his toilet and presented himself at the table. The family, who had been watching him curiously, eyed him with amazement, and at last his mother softly inquired : "Robert, have you already procured a divorce ?" A flush suffused the young man's face, which rapidly changed to crimson. Leaving the table amid a rear of laughter, be burried out and walked rapidly to his own abode where his young wife was impatiently and anxiously awaiting him. He had forgotten that he was married.

Advice to Husbands.

You have no right to take the pleasures of the home without also taking its responsibilities. You owe something to your children besides food, shelter, clothing and education. He who gives them only this makes his bouse only a half-orphan's asylum. Every father ought to father his own children. The evening hour ought to be the children's hour. I know you have come home tired; I know the day has been one long battle, and that you are weary with questions to be answered and problems to be solved. But I also know that the best way to lay down business cares is to take up home cares ; that the best way to keep young is to give an hour every day after supper to the children-to their sports, their lifeproblems and their life joys. He that giveth his life shall save it. But were it otherwise, it is unheroic, unchivalric, cowardly, to run away and leave all the cares of the children at night on the same shoulders which have borne them

You owe something else to your wife than a house and money to keep it a going. You would owe this to your housekeeper. To leave every evening and go off to the gosip of your club or of the village store is not keeping your promise to leave all others and cleve only unto her. To leave her sit in loneliness while the lazy clock ticks the hours away is not keeping your promise to comfort and cherish her. When you took her from her father's home you bound yourself to provide her with a new one, and you do not fulfill that pledge in providing her a cell, however luxurious it may be, for the lonely life of a married old maid. No wife ought to be left by her husband to be a nun. Put yourself in her place. Send her off for a week on a visit; spend your evenings alone-six of them will be enough for an experiment-and see how you like it. Or, if you cannot persuade her to desert you for even a week, though you have deserted her for many a week, perhaps many a month, imagine your positions reversed.

the Golden Rule ' Are you doing to IS THE BEST. BUY NO OTHER the one you profess to love best as you would have her to do to you?

## Women in Dakota.

What a blessing to a household is a merry, cheerful woman-one whose spirits are not affected by wet days or little disappointments, or whose milk of human kindness does not sour in the sunshine of prosperity. Such a woman in the darkest hours brightens the house like a little piece of sunshiny weather. The magnetism of her smiles, and the electrical brightness of her looks and movements infect every one. The children go to schoo! with a sense of something great to be achieved; ber husband goes into the world in a couqueror's spirit. No matter how people annoy and worry him all day, afar off her presence shines and he whispers to himself: "At home I shall find rest." So, day by day, she literally renews his strength and energy; and if you know a man with a beaming face, a kind heart and a prosperous business, in nine cases out of ten you will find that he has a wife of this kind.
