In the preparation of the Jewish

Passover bread the kneading is done in

the ordinary way. Pure guppowder

water is the only component added.

The time for the dough to be baked is

reduced to the minimum. It is broken

into flat cakes and then run between

rollers into very thin sheets. Over

these a workman rolls a pronged steel

to perforate the dough, so that air boles

may be seen in baked cakes. A steel

hoop cuts the dough into round, flat

sheets, which are then ready for the

oven. The baker stands with a paddle

attached to a very long handle. With

the aid of a boy he thrusts the cakes

treeless condition of the fertile prairies. or of the arid plains, although it has been the subject of a great many theorles. One is that the prairies were once lake beds, and afterwards, on becoming dry, they were grown over with rank grasses, the burning of which prevented the growth of trees. Another is that severe and long continued drought destroyed the forests, and on a change of climatic condition the grasses were the first to rever and have since held their sway through the aid of fires. Perhaps the theory most generally

heap.

held by vegetable physiologists is that the long continuance of forest growth of the same species on a rich soil, made constantly richer by its own annual deposit of leaves, dead wood and excretions from the roots, finally makes it poisonous and unfit for their growth, though nutritious to plants of different families. Decay produces more and more dead wood, so that fires finally destrey what the soil refuses to nourish. Coarse weeds and grasses aboudd, which make food for new flames to dostroy the

remnant and prevent future tree growh. Assuming the above to be true to account for the present changed condition of the prairie soils, it is said that age of continuous growth of grasses and other perennials have assimilated those qualities that were obnoxious to the growth of trees, and in nature's process of rotation of crops the soil has again become fitted for them. And so it has come about that it is only necessary to to check the annual prairie fire for a new crop of trees to dominate.

Women Blacksmiths.

It is considered improper for women to work underground in a coal mine, writes a Dudley Dudley, England correspondent. It is not equally wrong for them to toil as blacksmiths ? The scenes that occur in the smithles, especially in summer time, are quite opposed to the accepted notions of decency. The heat is intense. There are the forge fires, the red hot pieces of iron, and, above all, the tremendous labor of bammering out the iron. Even in wintry weather, with the snow on the ground, I have seen women perspire at their work. In the summer it simply results in an indecent abandonment of clothing. The fellahin of Egypt are better clothed than the women in a smithy's shop on a midsummer's day. Then to bring the olive hammer down with greater force, it sometimes happens that two or three persons will spring on the treadle at once. This is generally done by boys and girls. They stand as close as possible, hold each other by the waist, and simultaneously spring with the right foot on the treadle. It is hardly necessary to add that the standard of morality is not high among the members of this trade. and would undoubtedly be much improved if the women were debarred from such work. Whether the men alone could earn enough to keep them is a question not so easy to answer, though there can be no doubt that their wages would greatly increase but for the competition of their wives and their sisters.

Facts stand by every man who is worthy. A scorner loveth not one that reproveth him. The fire of jealousy burns with very ittle fuel. Life is not all in getting, but quite s much in helping. A book may live when the man who wrote it is dead. Silence is one of the hardest arguments to refute. Labor is not genuine that has no heart or conscience in it. What a heartless world this would be if there were no tears in it. A subscriber wishes to know how to destroy ants in the garden. It is very

difficult to destroy them or drive them away, as the substances that are disagreeable to the ants often injure the plants ; but one of the best remedies is to fill their holes with strong soapsuds to which a small quantity of kerosene bas been added.
