## Petrified Bodies.

A most remarkable story comes from Aspen, Colo., regarding an unexpected find in one of the principal mines on the Aspen mountains. Last Thursday, as the story goes, the night shift in the Minnie mine put in 52-inch holes in the breast of the 500-foot level and fired the blast just before leaving for the surface. On returning to the mine it was found that the two shots had broken into a cave, the extent of which they proceed. ed explore.

Going in a few feet, they found the walls covered with crystallized lime, lead that glittered like diamonds. Here and there little stalactites hung from the ceiling. The lime formation resembled lace and frieze work of wonderous beauty. The cave has a descent of about twenty degrees, and then formed rooms and chambers grand beyond description.

The men had entered about two hundred feet when they found a flint ax. A little further was a pool of fresh water and a current of air was felt. Further on a chamber was discovered covered with a brownish muck that was sticky. A man who was in the lead suddenly stopped and said : "There sits a boy." Sure enough, there sat a human form. The head was resting on the knees and the arms were drawn around the legs, Indian fashion. A stone bowl and ax were found beside the figure. The body was well preserved, but in trying to lift it one arm broke off. Other bodies in different attitudes were found in the chamber, but when disturbed they crumbled. One body of a man was brought out with the loss of arms and feet. The discovery has caused great excitement in Aspen. as the bodies do not seem to be those of Indians.

#### Onions Beat Quinine.

One day I was taken with chills and headache, signs that my old enemy, malaria, was on hand. My quinine box was empty, and I was looking forward to a restless, sleepless night. In desperation I peeled a raw onion and slowly ate it, and then went to bed, with warm feet and an extra comforter, when, presto ! I was asleep in five minutes, and awakened in the morning free free from malaria and ready for the day's duties.

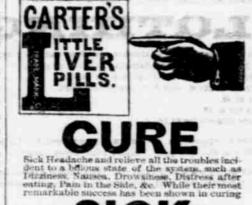

Our homely but strong friend will be appreciated in time as a medicine, and if agriculturists would turn their attention to raising a model onion, with the strong scent taken out that taints the breath so unpleasantly, families will be

Kellar the prestidigitateur, speaking of the famous Hindoo magicians said "A trick which puzzled me for a long time was making a pineapple grow under a handkerchief. The juggler lays a handkerchief flat on the ground and then begins to sing and beat on the tomtom, when in the centre of the handkerchief something begins to stir and rise in pyramidal form, dialating upon just about the size of a pineapple, when the conjurer inserts his hand under the handkerchief and pulls out a ripe pine-

Hindoo Tricks.

apple. "I watched this trick several times before I could get a clue to it. The motion of life puzzled me. But one day I took a position on the side-the conjurers sit on one side of a circle, making the spectators form the rest of the circumference-where I could see the juggler's motion clearly, and I noticed that one of the confederates put a bag like a sailor's bag, near the conjurer's

hands. He sat there tailor fashion, and as he spread out his hanckerchief on the ground I saw his hand make a a trip swift as lightning to the bag and back under the handkerchief, and I thought I saw something like the tail of a snake accompany it. That gave me an idea, afterwards, by pretending to

understand the trick, and by paying one of the Hindoos four rupes, I got him to confess how the trick was done.

"The conjurer does take a snake from the bag placed conveniently at his elbow. When the cobra is put under the handkerchief he naturally coils him self up. Then the conjurers begin their music and the cobra raises his head, and this gives the lifting motion to the handkerchief. One of the first things a cobra does when excited is to swell out his neck, and this makes the pyramidal shape. When the juggler puts his hand under the handkerchief he takes with it a hollowed pineapple and removes the cobra inside of it concealed by his hand. That is one of the cleverest tricks I saw in India."

### Maps by Telegraph.

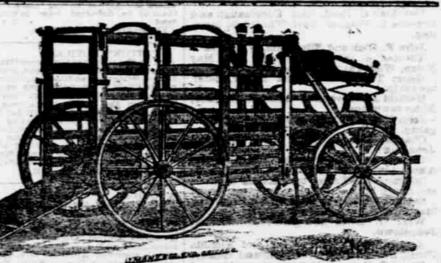

The fac-simile telegraph. by which manuscript, maps or pictures may be transmitted, is a species of the automatic methods already described, in which the receiver is actuated synchronously with its transmitter. By Lenoir's method a picture or map is outlined with insulating ink upon the cylindrical surface of a rotating drum, which revolves under a point having a slow movement along the axis of the cylin-

The recent railroad disasters on the Rock Island has recalled a number of stories regarding the carelessness of engineers and other men in the operating department of railroads. An old railroader was telling the other day of the time when he used to be conductor of a freight train. It was his misfortune to have abnormally lazy engineer, who would go to sleep on the slightest provocation. Whenever the train was sidetracked to wait the passage of an express train, the engineer would lie down on his seat in the cab, prop his feet up against the boiler head and go fast asleep. He would remain that way until the noise of the flying express awoke him. Then he would yawn and prepare to pull out. The boys in the train crew did not like this. "Why can't he stay awake and watch

for signals as we do ?" asked one of them one night, as the long train was on a siding waiting for the arrival of "No. 6."

"Well, why don't you see that be keeps awake ?" asked the old railroader, who was in charge of the train.

"I will," said the brakeman. With the assistance of the other boys he firmly set the brakes along the train and then hung a red lantern from the roof of the engine cab, so that it was hanging in front of the window just in front of the slumbering engineer. These preparations made he put his foot on the old-fashioned crank whistle and there was an awful shrick. The engineer jumped up and saw the red light. Confused for a moment he thought he was about to run into the rear end of another train, so he reversed his engine and jomped into the ditch. nearly breaking his neck. Of course the engine did not move a peg. The boys were all black in the way-car by this time, end when sleepy edgineer recovered himself and limped up out of the ditch he thought be must have been dreaming. However, he lost a year's growth and never went to sleep at his post a ter that. He was cured.

## Sceping Meats.

Dr. Kitchener's remarks in relation to this are concise, and will be of beat

Be HONEST and chew INZER'S fit to our der. He says : The t meat should hang lob tender pends on the heat and humid ity of The air ; if it is not kept long enough it is hard and tough ; if long, if loses its flaver. It should be hung Here it will have a thorough at and fodried with a cloth night and mornig, to keep it from damp and mustiness. Before you dress it, was it well ; if it is a roasting beef, pare of the outside.

If you fear your meat, etc., will ag keep till the time it is wanted, pathel or parroast it; it will then keys a couple of days longer, when it may be dressed in the usual way, only it will be done in rather less time. The cosk and the butcher as often lose credit, b meat being dressed too fresh, as the fi-hmonger does by fish that has been kept to long.

Dr. Franklin in his philosophical an periments, tells us, that if game or poultry be killed by electricity it will become tender in the twinkling of a eye, and if it be dressed immediate will be delicately tender. During the sultry summer months it is almost inpossible to procure meat that is no either tough or tainted ; the formers as improper as the latter for the unbraced stomachs of relaxed valetuda. arians, (for whom at this season, pertry, stews, etc., and vegetable soups us the most suitable food), when the digestive organs are debilitated by them. treme heat, and profuse perspiration requires an increase of liquid to restar equilibrium to the constitution.

Fattening Slaves to Kill.

Fattening slayes in a park and feed. ing them up like animals destined for the table, and then leading them ton shambles where they are shughtend like oxen, cut into pieces and shared bit by bit among hungry cannibalssuch is practice which is permitted, s. cording to M. Fondese, a Freach erplorer, in some of the French. Belgian. Portuguese and even British territy, ies in Ubaughi. M. Fondese was mat out three years ago by the French Gos. ernment to discover the sources of the Niariguition, and having returned after the successful accomplishment of his task, he hastens to tell his countryme all about the terrible things which be has seen in his travels. The "fattening parks" or paddocks

putting their "pills" in the cellar by the barrel and the doctors would take to onion farming. The onion acts as a cathartic and diuretic, and may help to break up a cold or lessen the bad symptons.. Said a doctor : "I always store a barrel of onions in my cellar during the fall. We have them cooked twice a week, and whoever of the family is threatened with a cold eats some onion raw. If this vegetable were generally eaten there would be no ditpheria, rheumatism, gout, kidney or stomach trouble, "But, bless you ! the young men and women are afraid to eat them. One young man went so far as to say to me : "If my wife ate onions I would get a bill of divorce."

### A food Story of Lincoln.

A lawyer is presumed to be always able to suggest a d'fliculty, no matter how self-evident the case may seem but the truly great lawyer knows bow to state a point so that even a prother. lawyer cannot start an objection. Stephen A. Douglas and Mr. Lovejoy were once guesping together when Abraham Lincoin came in.

. The two men immediately turned their conversation upon the proper length of a man's legs.

"Now," said Lovejoy, "Abe's legs are altogether too long, and yours, Douglas, I think are a little short, Let's ask Abe what he thinks of it." The conversation had been carried on with a view to Lincoln overhearing it, and they closed by saying

"Abe, what do you think about it ?" Mr. Lincoln had a far-away look as he sat without one leg twisted around the other, but he responded to the question : "Think of what ?"

"Well, we're talking about the proper length of a man's legs. We think yours are too long, and Douglas' to short, and weld like to know what you think is the proper length."

"Well, said Mr. Lincoln, "that's a matter I've never given much thought to, so of course I may be mistaken ; but my first impression is that a man's leg's ought to be long enough to reach from body to the ground.

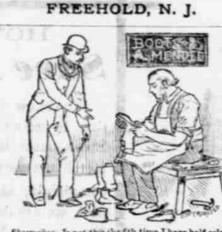

An exchange gives the following experience of a French agriculturist : Two peach trees of my orchard were covered with insects just as they were about to flower. Having cut several tomato vines, the idea occurred to ma to place them around the branches and trunks of the peach trees to shelter them from the sun. What was my surprise, on the following day, to notice that all the insects had disappeared, except from the leaves beyond the influence of the tomato plants. I carefully separated these leaves and applied the tomato to them, when the insects disappeared as though by enchantment, and from that time the peach trees began to grow luxuriantly. Wishing to carry the experience further, I put some of the tomato leaves in water and sprinkled other plants, such as rose bushes, orange trees, pear trees, ets., with the infusion, which al-

point goes over the cylindrical surface in a spiral path. The electric circuit will be broken by every ink mark on the cylinder which is in this path and thereby corresponding marks are made in a spiral line by an ink marker upon a drum at the receiving end. To produce these outlines it is only necessary that the two drums be rotated in unison. This system is of little utility, there being no apparent demand for facsimile transmission, particularly at so great an expense of speed, for it will be seen that instead of making a character of the alphabet by a few separate pulses, as is fone by Morse, the number must be greatlyincreased. Many dote become necessary to show the outlines of the more complex characters. The pantelegraph is an interesting type of fac simile method- in this form the movements of a pen in the writer's hand produces corresponding movements of the pen at the distant station and thereby a fac simile record. Jay Gould as an Author.

The great wizard of Wall street is so distinctly fixed in the public mind as a financier that few ever think of him as an author. But authorship was, in fact, his first vocation. When he was just beginning a business career,

thirty years ago, and when he had bare-ly attained his majority, he made a sur- DAILY MEAT MARKET, vey of his native county, and not only published a history of it, but accompanied it with a supplementary map. His peregrinations with a wheelbi rrow over its many crooked roads are still remembered, though the financial success

of his enterprise was not by any means equal to that which followed afterwards. Yet his "History of Delaware County, N. Y.," now so scarce and difficult to procure, was a most creditable performance. It cost no little labor

and was very well done. The county had a stiring history and was the scene of fierce Indian, anti-rent and Tory conflicts, all of which were faithfully and graphically related by Mr. Gould. The book, however, went out of his mind and, it is said, has been partially extinguished through his own efforts. Whenever a stray volume appears it commands a uniformly high price. a single copy selling at auction here once for forty dollars. The book was dedi-

cident which shows how some English landlords treat their tenants. A pros-HALF RATES FOR perous farmer, who was desirous of The ROUND TRIP. purchasing his holding, which has been occupied by his family for three generations, walted upon his landlord and made known his desire, stating that he had saved £800. Out broke the landlord : "You have saved £800 on my and ! I tell you what I'll do ; I'll raise your rent .2100 a year !" And be did it. The rent was an impossible one. The tenant had to turn from the house in which he was born, and the farm

was offered for new occupation. It had to be let at £50 less rent than was actu-

Fondess offered freedom actually refused it. They eat, drink, dance and sing until the head "Fetishman" comes round, accompanied by an orchestra of tomtom and tin-kettle players, selects a sufficiently fat specimen, carries him or her to the market place of the village, and splits his or her head with a batchet or scythe-like knife. The eves and tongue of the victim are given to the "boss" fetish and the rest of the body

To Copy Drawings.

is divided among the anthropophagi.

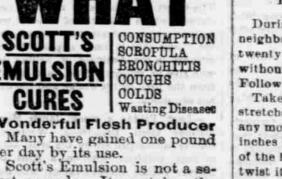

A new method of copying drawings which may be found of service in architects' offices is here given. Anykind of opaque drawing paper in ordinary use may be employed for this purpose, stretched in the usual way over the drawing to be copied or traced. Then, by the aid of a cotton pad, the paper is soaked with benzine to enter the pores of the paper, rendering the latter more transparent than the finest tracing paper. The most delicate lines and tints show through the paper so treats, and may be copied with the greater ease, for pencil, India ink, or with colors take equally well well on beni-

ed surface. The paper neither creased nor ton. remaining whole and supple. Indeed, pencil marks and water color tistings last better upon paper treated in this way than on any other kind of tracing paper, the former being rather difficul to remove by rubber. When large drawings are to be dealt with the beszine treatment is only applied to parts at a time, thus keeping pace with the rapidity of advancement with the work. When the copy is completed the beszine rapidly evaporates and the paper resumes its original white and obard appearance without betraying the fails est trace of the benzine. If it is desired to fix lead pencil marks on ordinary drawing or tracing paper this may be done by wetting it with milk, and difing in the air.

During the last twenty-five years a neighbor has permanently coredows twenty horses of the kicking habin without failing in any case attempted.

Following is his method Take a half theh rope that has been stretched until it cannot be stretched any more, the it around the borses' inches back of the pad and telly bad of the harness ; insert a short stick and twist it up nearly as tight as the rold will bear without breaking, and tiethe stick so that it will stay. Fasten the horse in a stall where there is room be hind him to wield a long lash will, then strike him around the hind left quite severely ; at the second or third blow he will generally kick with both feet with all his might, but only two s three times. If he has been it 12 babit of kicking in harness, drive him with the rope on for two weeks, or ap-
