Points About Counterfeiting.

The making of counterfeit money re-quires a number of processes and the women connected with the families have much to do with counterfeiting the "queer" for the market. The money is not as a rule passed out just as it comes from the press. It is desirable High Qualities to make the bills look old and to give them the appearance of having been bandled. They are sometimes dipped in weak c ff e to give them a brownish tint. Oil mixed with dirt is used to produce the effect of finger mark and the bills are rubbed this way and that until they are soft and lose their rustling nature. It is a great deal easier to puss an o'd counterfeit bill than a new one and the work of making the bills old is no light matter. One of the secret-service officials tells me that it takes eight months to get up a counterfeit note that will have any chance of cost \$1.60 to land. passing.

The engraving must be done by an expert, and a good counterfeit plate plaid in all the light spring colors, elegant will sell to the shoyers of the queer for value. hundrads of dollars. I looked over the scrap books of noted counterfeiters, IN SILKS, TCT and I was shown some bills the authors of which have never been discovered. One of the best counterfeiers in existence is a \$20 greenback, and it is not known whether it was made by a man or a woman. It is not engraved, but it is drawa entirely with a pen. Every line and dot, with all the shades of green, black and red of the regular Nets at 60 cents-dollar goods. \$20 bill are seen upon it, and the treasnry department has been searching for penre for its maker.

It often goes through many hands before it is detected, and whether it is made by male or female it is certaiely a work of fine art. Another family of counterfeiters is the Johnson family, two brothers of which are serving their terms in the pen t ntiary. The women were suspected but escaped through a technicality. They were engaged with their brothers in getting up the 25 silner certificate plate. This was a fine specimen of engraving, and its bills were first discovered in circulation in Detroit.

Hint For Vacation.

If you have not laid out your vacation for the season, you should begin now, and you will enjoy it in anticipation from now until you go. 1 always get a year's pleasure out of my Summer vacation, in anticipation, participation and retrospection, says a writer. Now a word to these who cannot spare the time for a Sammer outing. It is a well-known and generally accepted fact that the aggregate re-

PRICE - REDUCTIONS

the design in the glass with coarse tools, which leave rough face ts, but remove most of the glass to be cut SWSY. The roughing-wheel is made of iron, and is about two feet in diameter. It is mounted on a horizontal axis. The face of the wheel is about seven eights of an inch broad, and is kept supplied with a mixture of coarse sand and water allowed to constantly drip upon it from a hopper shove. The wheel makes about a thousand r-volutions a minute, the speed varying with the character of the work to be done. It is slower for the deeper cuttings. The workman seizes the carafe with both hands, and presses the bottom firmly against the edge of the rotating wheel, making a cut across the centre, and as far each way as it is desired to have the star extend

Then he turns the carafe around one sixth of a revolution, and makes a similar cut through the centre, judging of the distance entirely by his eye. A second turn of one sixth of a revolution, and a third cut along the dismeter is made. This gives a six-pointed star.

The intervening spaces are then divided by similar cuts, and the spaces thus formed again divided, giving a twenty-four-pointed star.

A Chinaman's Clothes. A clothing merchant whose patience

is tried to the verge of exhaustion by the perversity of those customers who never will acknowledge that a new suit of clothes fits as well as it ought might be excused for wishing himself a Chinaman if he stopped once to see a Mingolian try on a new suit of clothes in a Mott street clothing house. The outfit consists of shirt and trous-

ers, boots, hat, short coat and overcoat, The shirt is generally of pongee silk.

TIN, COPPER AND SHEET-IRON WAR

and even when fairly taimed, were set to be trusted. In Paris, however, the experience of a daring tamer, H-genbeck, has been very successful. Here beck's method has been something like the following : "In infancy, the incubs born in captivity were allowed ful way as far as their natural movement were concerned. Gradually the other whom he desired to train were alload to associate with them, and in this with by slow degrees, they also became tagand very friendly to the people abor hem. They have been trained to a many surprising things, such as draw. ing a chariot around the cirque at ful speed-a sport they seem to take a inly interest in, as they respond to the command of the driver readily ; lon. ing a pyramid as trained borses in made to do in circuses, and standing a their hind-quarters in obedience to the raised hand of the trainer. O' course, to make the exhibition etirely safe to spectators as well as train ers, there are always a large number attendants on band. The tamer, M Hagenbeck enters, whip in hand, soit accompanied by a dog. Through the entrance at the same moment come for hons. One goes up to the tamer and licks his hand with her tongue in an a fectionate way. All four then turn la ward a bench, where they lie down, A word two of the lions rise, and, com ing forward, take in their mouths s line of ribbon from the hands of th trainer. Unwinding it, they each be an end of the line while the dog jump over it. The lions stand as still s though carved of stone, except for a occasional waving motion of the tail

opinion that lions were not safe totam

And from an economical point of view such outlogs are chesper than staying at home ; also when looked at from a physiological st indpoint, see the grand results. The recuperation of vitallity and rest for brain and body is worth more than ten times the cost of the trip-paid out for medicine and doctor's bills.

I do not mean for you to go to some fashionable Summer resort, have your mall come from the city every day, and indulging in dancing, bathing, dioners and all other sorts of social disposititions.

This would only be jumping from the frying pan into the fire. What I mean is to go to some quiet farmhouse in the mountains, or with your family or a few jovial friends go and camp out in the pine woods, on the banks of a clear spring or lake, where you can get good fishing and hunting. Take along your rod reel, and goo, and leave behind your mail, and all business matters. What you want it change- a change from the dia, rush and worry of city life, to quiet rest and enjoyment. Try it once, and I know you will not miss taking a regular Summer vacation every summ is it is possible to do so.

A flaincoock Whips a Tiger.

A correspondent of London Fanciera' G z tte relates, as an instance of the coursgs of gamecocks, the following fact communicated by an officer now in the American navy : "Sailing from Trincomall, op board the Anchiser for London, we had a large consignment of wild beasts for Mr. Jamrach, for the feeding of which he had taken in a large number of live poultry. On board there was a tiger so flerce and savage that he would take the second susp at the red hot bar, and theseffore named him the Demon. Among the poultry one of the jungle cecks played havor with the other cocks and became so bold as to fly at the sailors' caps when teasing him. At last he put his sharp sputs through a man's hand, and was doomed to visit. the Demon's cage. The tiger put his paw forward to the bird in a stealthmanner, when quick as lighting, the cock sent his space into it, and for a few minutes the tiger loked his paw ; then, reaching out his nose nutil it got in close proximity with the bird, the spurs were dashed into the tiger's nose, from which the blood trickled. and, with a mufflid growt of rage, the tiger retreats ed to the furthest corner of the cage. The sations sent up a cheer at the victory and determined to bring the game bird to England, but he died before reaching the channel.

How to Take Care of a Watch.

The following may be taken as fundemental maxims in the care of a watch, says a prominent writer : Dr not let a watch run down, but wind it regularly at a fixed time each day ; set your watch by and compare it with a reliable regulation ; hold the watch still when winding it ; never shake a watch violantly; never m ddle with the

the grandmother an "old girl." It was all unladylike ; and yet these very girls were ones who were in the habit of hearing good English spoken, of reading good books, and who after a little thought, knew exactly how abominably they were speaking. But it was a bad habit, and a bad habit is more easily gotten than gotten rid of. However, they are doing it ; they formed a little "Antislang Bund"; each time a slang word is used a penny is dropped in the slot of an earthenware savings's box, that cost just a penny ; and every girl is put on her honor to keep account when she is away, and to duly attend to her debts. L.O. U.'s are accepted, though as yet have inaugurated a only one has been offered. There is a serious belief that at the end of 1890 there will be enough money in the box to found a hed in the Babies' Hospital but it is perfectly certain that as the months go by by the contributions will decrease, until, by January, slang will be eliminated from the conversation of this group of girls ; and not only will the cheery leader announce that she's tired of it, but that she has absolutely stopped using it. Why Stamped Euvelopes are Redeemed. Some people have an idea that the Government redeems postage etamps when from any cause they become unfit for use or are difficult to use. Frequently sheets of stamps are stuck together, or are torn or injured. The loss, if any, falls upon the owner, as the Government refuses to assume any responsibility of stamps when once sold. The agents of the Government, the postmasters, can redeem stamps which they have for sale, if, from any accident they become unfit for use. But when a

citizen buys a stamp he either uses it in the legitimate way or else he is out the vatue of the stamp. The Government, however, redeems stamped envelopes. It one shou d happen to be misdirected or should become blotted or for any reason a person should wish to tear open a stamped envelope after he had sealed it for mailing he can bring it to the postoffice and get a brand new stamp in its place. The reason for this difference in the treatment of the adhesive stamp and the stamped envelope is that the adhesive stamp can be used and then washed and passed as good, unless a careful scrutiny is made.

If the Government should begin the practice of redeeming adhesive stamps the opportunities for fraud would be increased. Then the adhesive stamps are manufactured at a cost to the Government while the stamped envelope is not. The stamps are furnished to the public at the face value, and out of this has to come the cost of manufacture. but in the case of stamped envelopes

and does not differ much in cut from ICURE the ordinary American flaonel shirt. Wearing no collar, the Chinaman is not troubled by having to remember the size of bis neck.

As all that is seen of the trousers is the bottom of the legs, and these to be in style must flop about the ankles at When I say CURE I do not mean merely to top them for a time, and then have them re-ara again. I MEAN A BADICAL CURE I have made the disease of every step, they can be fitted with

It costs you nothing for a trial, and it will cure you. Address down at the heels they will do. The coats are made in such ample fashion that any one from a giant to a humpbacked dwarf may be fitted with facility. They have no sleeves to pinch the H. Q. ROOT, M. C., 183 PEARL ST., NEW YORK wearer under the arms. The customer simply gathers the garment around his neck, adjusts the clasp so that it will not catch his windpipe too tightly, sees that the skirt is not too long, and there he is. Wrinkles are a mark of affioence. Only your poorest Chinaman can afford so little cloth that his garments must cling to the shape. A hat four sizes too large for the head, in order to accommodate the pig tail, tops it all off, and is the only American made article of them all. Why does not John wear

Trapping Eels on Dry Land.

It has always been affirmed by old professional fishermen, and by some paturalists, that cels have the ability to leave the water and travel long distances on land. It is said that the slippery coating of slime that encases eels is for the purpose of lubrication when they are squirming their way on overland journeys. Jerry Gorman of Upper Blocks, a well-known Delaware River fisherman, now comes to the front with a story which he says proves that eels can get over the ground as well as through water. Gorman has this spring, after getting his share of shad nights at the fishery be is interested in, cleaned two or three for his own use t a spring about 200 feet from the river shore, throwing the heads and other refuse on the ground. The first morning he found that all the refuse bad been eaten or carried away during the night. He noticed the tortuous tracings in the sand be-

tween the spot and the river, and at first thought the refuse had been eaten by water anakes, which made the tracks in the sand.

On the second or third day he changed his mind, and concluded that the tracks were made by cels that came up out of the river and ate the shad h-ads and en trails. To test his theory he placed the refuse of his fish in an eel pot the other night and set the pot at least 20 feet farther from the river than the spring is The next morning he went to his trap and found 19 blg. fat cels flopping around in it. He believes that he is the first man on record to trap eels on dry land.

Highway Robbery by a Monkey.

A correspondent writes from Ahmedabad : "Have you ever heard of our Bobes, Fly Nets, Curry Gombs, etc., etc. Re-pairing Neatly and Promptly done. All work blue-faced Guz-rat monkeys committing highway robbery ? Well, I have, and

A Railroad on Pike's Peak.

A cog-wheel railroad is at present in course of construction on Pike's Peil a mountain in Colorado belonging ! the Rocky range. The railroad when completed will extend from Maniton to the summit of the Peak. The mout-Isin 18 about 14 215 feet in height, all precipitous cliffs of solid granite, in gether with deep canons and raviou form obstacles that combine to make the work of constructing the railest extremely difficult.

The road-bed was commenced int fall pear the top of the mountain, and continued downwards, because the in tensely cold weather prevailing during the winter at such an elevation prevent work being carried on then. Must and buros were used to transport M trail all the tools, camping outfit and provisions to the camps along the list of the road. Eight hundred men at one hundred and twenty teams of horses and mules were employed in making the road-bed. The elevation overcom throughout the entire line is about out thousand feet per mile.

In all places along the road where it is necessary to guard against wash on A culverts will be placed built of soli masonry. All the bridges will be in and no trestles will be used. The trad will be standard guage laid on spruce ties. The engines will we thirty-five toos and will be operated cog-wheels, furnished with brakes, that can bring the train to I stands ill in ten inches when going et ther up or down. The engines are de signed to move three coaches, and De maximum speed of the train is eight miles an hour. The cars will carry any assengers and will be pushed by there
