Comparisons of the Cost of Transportation Upon Roadways That Are Improved and Those That Are Neglected.

Many people can only be induced to incur large expenses for street paving by well-founded prospects of gain from it. They regard it as they would an investment. Though it is less desirable when viewed independently of these very practical considerations, it may well be subjected to such tests of value, says Paving and Municipal Engineering. Its paying qualities are, to some extent, capable of demonstration. Its economies may be indicated by comparisons of the cost of transportation. of relative wear and consequenti: 1 loss and of maintenance of paved and unpaved streets. While there are wide differences in the resistance to traction of asphalt, wood block, brick and granite block road surfaces, the average where the streets of a city are paved in about equal proportion with these materials is less than one-third the average resistance of the streets of a city having only macadam, cobble-stone. earth and sand road surfaces in about equal proportion. As one horse can. therefore, draw for ten hours three times as heavy a load on streets of the first class as on those of the second class, there must be an average saving of two-thirds in the cost of all transportation by means of animals and vehicles where paved streets are used. In other words, the city with well paved streets will get at the same cost three times as much service as one with streets that are not well paved.

The possible gain from this in dollars and cents is indicated by the statistics of freight transportation. In the year 1890 the railways of the United States moved 701,344,437 tons of freight, which was probably hauled over roads or streets at the points of loading and unloading the cars an average distance of half a mile each way. As a load weighing a ton cannot be transported a mile by means of animals and vehicles for less than 40 vents, which will be used in this calculation as an average charge, the street haulage of the freight moved by the railroads of the United States in 1890 must have amounted to about \$280,537,775.80. It will be assumed, however, at the risk of being much too liberal in a tendency to underestimate, that the average street haul was only a quarter of a mile each way and that the cost was therefore \$140,268,887.40. A saving of two-thirds of this sum would earry to the credit of the economy account of street paving \$93,512,591.60 a year, or, without making any allowance for the annual increase of traffic, \$935,125,910 in ten years. The freight moved by the railroads, it is supposable, was carried largely into or from the 225 cities which constitute the principal markets or distributing centers of the country, but, after all, railroad treights represent only a portion of the street hauling, doubtless much less than one-half, so that after much trimming brought at last to the conclusion that the cost of street traffic, largely in cities of more than 10,000 population, can be reduced \$187,025,183 a year, or \$1,870,251,832 in ten years, which, with interest at the rate of 5 per cent. per annum, would make a total saving in a decade of \$1,963,804,423,50, which would pay for 28,044 miles of street paving at a cost of \$70,000 a mile.

A NOISY LIZARD. The Annoying Conversation of a Tuctoo

with Himself. The tuctoo, or trout-spotted lizard. is eight or nine inches in length, with a broad and frog-like head, and eyes that stand out like those of a crocodile Mr. Cuming, author of "In the Shadow of the Pagoda," was frightened by a tuetoo during his first night in Burmah, and takes his revenge by describ ing the creature with all the sarcasmat his command.

He had gone to bed and was just falling asleep when a tuctoo spoke up from a spot about a yard and a half from the pillow. The new comer bounded out of bed and snatched up his revolver. Happily a native was at hand and pointed out the lizard. Even then Mr. Cuming could not believe that so small a creature could speak with such a voice. The tuctoo, as if divining his listener's doubts, spoke again. "I have hated him from that hour, says Mr. Cuming.

"His favorite resort is about the angle of the veranda wall and the ceiling, and from that coign of vantage he beguiles the passing hours after sunset by bawling out his name at short intervals. If he would do so once and have done with it, we should not object; but anything like self-restraint is foreign to tuctoo character.

"He wants to attract notice; and he always succeeds. He begins by remarking: 'Cr-r-r-r' in a pleasant, con versational tone; then 'Cr-r-r-r!' a little louder, as if he thought you had not eaught what he said. After this he pauses a moment, and what was really weighing on his mind comes out-Tuctoo!

"You might imagine that he was paying a visit, and giving his name to a very deaf servant, for in a second out it comes again, 'Tuctoo!' a third time "rectoo!" (Confound it, can't you hear?)

"Then he recollects that he must not lose his temper with a servant, and repeats 'Tuctoo' in a languid drawl. He finishes off with a 'Crrr-errr of ruffled pride, which seems to mean: 'Not | a bad name when it's properly announced, you know. **

It is said that Archibald Clavering Gunter was refused admission to the Authors' club in New York on the ground that "Mr. Barnes of New York" is not literature.

Reportorial Shrewdness A certain newspaper reporter assigned to investigate the case of a young woman at a hotel said to be in a trance represented himself to be a doctor so that he would be allowed to see the victim. He put on a wise air, says the Cincinnati Times, gravely felt her pulse, and then turned from the bedside. "What is best to be done?" inquired those in waiting. "The best thing to do is to douse her with ice water," said the pretended doctor. This was done, and the young woman woke from her alleged trance, got up and dressed in a hurry. and left the house in a huff. The "trance" maiden was only recovering from a pleasure jaunt over the Rhine.

LAND AT THE NORTH POLE. Evidences of It Traceable in the Icebergs of the Arctic Ocean.

There is no reasonable doubt that there exists in the Arctic ocean, somewhere in the vicinity of the north pole. an ice-covered land of considerable extent. This is evident from the character of the icebergs observed at various points within the Arctic ocean; for there are different classes of icebergs, as there are different kinds of coal. to his Specialty The difference between the floeberg, or palaeocrystic leeberg, and the ordinary i eberg of the north Atlantic, says a scientific exchange, is as great and as carriy distinguishable as is the difference between a block of bituminous coal and one of anthracite. The floeberg is distinguished by its tabular form, great uniformity of height, rectanguar shape, nearly flat surface, perpendicular cliffs, and especially from ts laminated structure. Whenever a palaeocrystic iceberg is seen in the far north, before its face has suffered much from the melting action of the sun, a close observer notes that it presents along its front a series of faint blue lines, separated by interspaces of opaque white. These lines show a a stratification due to yearly necumulations of snow upon a nearly level surface, which are transformed gradually into ice, and each line also represents the limit of the accumulation of a single year. In a similar manner are formed the glaciers of the Alps and Greenland, but these latter ice-sheets are toru distorted and reformed a thousand times in their descent down rapid slopes and through confining valleys of greater or less width. Floebergs, then. are parts of great ice sheets which ormed from successive snowfalls over a land area of no great elevation and very gentle gradients, flow downward from its highest level in the direction of least resistance. The slope being gentle, the ice moves gradually seaward, with its structure unchanged and its stratification unbroken, and passes slowly into the ocean, whence eventually its buoyancy causes it to rise and disrupt in a vast mass from the main sheet.

WALKING BIRTH CERTIFICATE. Some Curiosities of Tattooing in the

Islands of the Pacific Ocean. It is quite common in Fiji and Samoa for a man to bear upon his arm or body a certificate of his birth which is practically indelible, said a globetrotter to a St. Louis Globe-Democrat man. Tattooing is carried on in these slands to an absurd extent, and it is the practice to tattoo on the hand of a mother the date of her children's births. Sometimes also an enthusiastic father will tattoo the date of the birth on the child itself, and no matter how long it lives the certificate will remain easily decipherable.

In some adjoining islands every child is tattooed almost from head to foot on completing its twelfth year. The result is very remarkable, especially if the child is growing rapidly, so that the spaces between the tattoo marks mercase in size year by year. I remember one man who joined our crew when we were shorthanded who had every available space on his anatomy year after year, until he ap peared to be nothing but a walking collection of grotesque signs and symools. In Japan tattooing is now pro hibited by law, but it is still practiced by superstitious subjects of the mikado very freely.

INGENIOUS MEANNESS.

A Brother in Piety Plays the Fly-Paper A good story comes from a neighboring village, and a report of the ingenuity of man's acquisitiveness may be a pointer for some of those not averse to turning an honest penny-their way. says the Fargo (N. D.) Forum. A certain brother in the fold, who takes an active part in church work, and in whom implicit confidence has been placed by his associates, has been detected of having a piece of sticky flypaper in his hat when he went to take up the collection at the church.

All the coins that dropped upon the fly-paper stayed there, and it was amazing how the big pieces crowded the little ones off. When the audience had been solicit-

ed, this smooth individual would advance and turn his hat upside down over that of another who had been soliciting the audience on the other side of the house. All the coin that dropped belonged to the church, and all that remained in the hat was to remunerate him for the work he had done, so to speak.

The Modern Canal Boat.

A single barge on a canal brought up to modern requirements will carry as much cargo as a train consisting of forty ears. The dead weight of the load to be moved, that is, of the barge or truck, is very considerably in favor of the barge; the same amount of power applied in traction will move five times the load on a waterway that it will on a railway; the original cost of construction and maintenance of a canal is considerably less than that of the railway. On the great lakes traffic is conveyed at a cost of .015 cent per ton mile; by rail the expense of conveyance inclusive of charges due to maintenance of way, is ten times as great as on the lake steamboats. The average cost of moving a ton of freight a mile on the railroads of the United States is .522 cent. The average freight by water on the Eric canal and Hudon river, where the towing is principally done by horses in boats of a small capacity, is .233 cent per ton

THE FUNNY MAN. Lover-"I assure you, Herr Meyer, I cannot live without your daughter. Herr Meyer-"Oh, you overestimate my income." Fliegende Blaetter. Professor (to class in political economy) "What is the bardest tax to

raise?" Student (whose mother is house cleaning)—"Carpet tacks."—Detroit Free Press. HE-"Don't you think, dearest, that Rev. Dr. Sermon is the best man to marry us." She (three times a widow)

"I think so dear, I've always had him. Tid-Bits. Doctor-"Madam, I find that your daughter has pneumonia in the worst form." Mrs. Nurich-Well, I don't see how it can be; we've money enough to get the best kind there is to be had."-

Cynic-"Miss Beauty is now in woman's golden age." Miss Wantokno-"What age is that?" Cynic-"From twenty-two to twenty-six. In that age woman wants to marry for money: before it she wants to marry for love, and after it she will marry for anything."-Town Topies.

MRS. CAWKER-"Don't you think it is very strange that Mrs. Stivetts hasn't returned my call yet?" Mr. Cawker-Not at all; it is merely the result of force of habit." Mrs. Cawker-"How is that?" Mr. Cawker-"She was a telephone girl before her marrage."-

Judge. Huge Government Buildings.

The state, war and navy departments at Washington occupy an enormous structure, creeted at a cost of \$10,500, 000, covering four acres of ground and having twenty neres of floor space. The treasury building cost \$8,000,000. The interior department buildings cover two large blocks of ground and its buildings cost \$2,700,000.
