

Now the country is told that all that is needed to assure prosperity is the passage of the tariff bill. In other words, work and wages cannot again become active until the campaign contributors get their money back.

The remains of Wm. S. Ladd, a millionaire who died in 1893, have been stolen from the Riverside cemetery, Portland, O., with the expectation, it is believed, that a large reward will be offered for their return.

EX-SENATOR INGALES, of Kansas, says that "since the election I have been in all parts of the country from San Francisco to Boston, from Montreal to Atlanta, and it is the concurrent testimony that times have never been harder nor money scarcer than now."

THE performance of Sparks' circus at Sutton, West Va., Friday, two of the trained horses began fighting, and one rushed over the ropes and upon the seats through a crowd of women and children, causing a panic.

VERY few persons except perhaps coal merchants and shippers are aware of the enormous increase in the production of bituminous coal in the United States during the past 15 years, and more practically during the past two or three years.

We are assured by The Sugar Trade Journal of May 13—that the sugar trade—that "if ever a monopoly existed in the sugar refining business it exists no longer, and it is not likely that it will ever be renewed."

There is a very simple way of solving the revenue problem by pruning the appropriations to fit the present revenues. This plan doesn't seem to have occurred to the legislature yet, and until it does the legislature is going to be in trouble.

WHILE they have just commenced harvesting wheat in California and Texas, and have only finished planting in the northwestern states and Manitoba, speculations on the prices and crops for the year are in full blast.

The California argument for higher fruit duties is a sort of perpetual motion. The only disadvantage the Californian fruit raiser is at to be found in his own land, but the real thing that makes his land expensive is the profitableness of fruit culture.

The increased duty adds to the profits of fruit culture, and the price of land takes another leap, when the fruit grower complains that the interest on his land investment is so great or the rental he has to pay for his land is so high that there is an insufficient profit along the business for him, and the only thing that will save him from disaster is more duty.

The trusts have a cinch on Dingley bill profits. Of course they will make many times more if the bill becomes law, but they are already engaged in taking part of their profits.

Sugar has risen considerably in anticipation of greatly increased duties, and merchants all over the country are buying in store in large quantities, but they are already engaged in taking part of their profits.

Under authority of a law enacted by congress the United States department of labor, a few years ago, prepared a report showing the effect of the employment of machinery, which report sustained every contention in favor of machinery.

The latest census report of manufacturers shows: Number of establishments reporting—1880, 253,852; 1890, 355,401. Average number of employees—1880, 2,632,595; 1890, 4,711,832. Total wages—1880, \$947,963,795; 1890, \$2,282,823,265.

The law is invariable that the unprotected must pay the ultimate cost for the protection of the protected.—David Lubin.

The following are some of the comments of a man well acquainted with the linen and the linen industry upon the senate proposed duties on linen goods under the amended Dingley bill.

It is claimed that this advance is necessary for revenue, but the effect will be that the people will pay for their linen something cheaper, and thus be deprived of this useful fabric, and the revenue will be correspondingly diminished.

It is possible speculators may start mills on the strength of the news, and then step out, leaving the unfortunate laborer and manufacturer to face the difficulties of the situation as best they can.

Washington Letter.

Washington, May 29, 1897.—The gag rule of the caucus has been applied to republican senators in order to hide their tariff differences from the public.

One of the most notable things about the opening of the tariff debate was the factious opposition to the passage of the bill. We know the desperate condition of this country, the ruined homes, the blasted hearts.

It is possible speculators may start mills on the strength of the news, and then step out, leaving the unfortunate laborer and manufacturer to face the difficulties of the situation as best they can.

Very few persons except perhaps coal merchants and shippers are aware of the enormous increase in the production of bituminous coal in the United States during the past 15 years, and more practically during the past two or three years.
