Railroad Meeting .- We notice in the York Gazette a call for a meeting at the Brogueville Tavern, in Chanceford township, that county, to-morrow, to consider the propriety of constructing the pro-posed Railroad to Peachbottom, direct from York, instead of intersecting with the Northern Central at Hanover Junction. "Divided counsels" have killed many a public enterprise.

Sules .- David Hoke has purchased the property of Thomas Himes, in New Oxford, for the sum of \$6,000—a large two-

work, to clear the track, though passen-

came through. The Ice Gone.-The sunshine of the ty, to be called "Petroleum," out of past week melted the snow so gradually as not to cause the "high waters" feared by many. The ice, thick as it was, has almost entirely disappeared from the streams, and we have heard of but one instance of material injury done by itthe washing away of a part of the pier under the county bridge near Hoke many worthy of note. Thanks for the

A Farmer writing to Baugh & Sons says he used their Raw Bone Phosphate last spring, and found it to be all friends claimed for it-used it on corn broom corn, potatoes, strawberries, and the various kinds of vegetables, with the most satisfactory results. Another one says, owing to the excessive wet weath er his corn did not mature properly, bu he is satisfied where he applied the Phosphate there was 50 per cent. more corn than where it was not used. Another used it on eight rowed yellow flint corn, which he found to be larger and more prolific than formerly-the being 11 to 12 inches long, and threefourths of the crop showing 12 to 14 rows per ear-this land was in a high state of cultivation and had never given such results before.

The originals of the above letters may be seen by any farmer who will cal upon the manufacturers of Baughs' Raw Bone Phosphate.

Information for Housekeepers .- As pring is at hand, and our lady will soon have to take down and set way their parlor and sitting room stovies, some instructions as to how they should treat them before placing them away for the summer may not be considered in appropria. One who speaks from long experience recommends commor stove blacking, well put on and set with elbow grease. Many persons are in the habit of putting their stoves. In the cellar during the summer, never thinking that the dampness acts as a powerful de structive agent upon them. They should be placed in an upper chamber or the garret, well blackened and cleaned, and there will be no danger of rust. Attention to this may save considerable expense in the course of a year, and preserv stoves for a longer time than if other-

wise treated. A Feline Curiosity.-Professor Glover has recently added a new attraction t his museum in the Department of Agriculture, it being no less than a cat imnorted from Angora, Asia Minor, the famous goat region, and much resembling that animal, having a long and silky white fleece, with a long heavy tail. This is said to be one of the best of the cat species, being very domestic in habit and an expert mouser. Enormous prices have been paid for this breed to be placed in museums of natural history, and by the nobility and savans of Europe as pets. The cat now on exhibition is one of three imported by Hon. Israel S.
