PRIDAY, MAY 15, 1866. PRUNING TREES.

There is a great deal said about the coner time of pruning trees, and especially the apple tree. Some prefer fall, some midwinter, some spring; but scarcely one recommends the best time-in our humble opinion-midsummer. Doubtless some old fogies will open their eyes and hold up their hands at such an innovation, and denounce it as an absurdity; but we think we will be sustained by a majority of the "live"

men of the day. If we desired to improve the form of fruit tree and get rid of some of the super fluous wood, we should prone in winter; but if we desired fruit and perfectly healed stumps, we should prune from the fifteenth of June to the twentieth of July. We have done this often with the happlest results. The fruit buds form after this, and the operation of suddenly cutting off its growth, produces buds; while the winter or early spring pruning will produce only wood.

In pruning ornamental trees in midsummer, the bark, instead of receding from the stump, grows over it, and in a few years will completely cover it and make a perfect amputation.

We have noticed this upon our own premises as well as upon those of others many times. This pruning is done when the tree is taking its midsummer "siesta. and then wakes up, refreshed for another start, and the bark gradually steals over the slump as if ashamed of the shabby Yooking exposure.

When the tree is in full leaf, and pre sents its full form to us, we can see exactly where the pruning should be done in order that while the overgrowth may be removed, the symmetry of the tree may be preserved. Especially is midsum mer pruning to be observed, first, to produce buds on fruit-bearing trees as before stated; and second when large limbs are to be removed .- Germantown Tele-

SHEEP SHEARING, -Sheep shearing should be accomplished soon after the middle of May. A great deal of care is necessary to avoid bruising, or cutting with the shears, to both of which the nnimal is liable from careless hands.

The practice of washing the sheep be fore shearing, is being abandoned, we think, in great measure, as injurious to the animal, and incurring risk to those engaged in it. If a fair and certain rate of deduction from the price of washed wool could be had for that which is un; washed, there would be no doubt, w think, of the propriety of selling always

After shearing, the flock should be protected from bad weather, especially long, cold rains, by a shed which they may

EXPERIMENT IN WHEAT CULTURE. A Pennsylvania farmer (J. A. Gilpin, Esq., of Winston,) made an experiment Bonds, and Stocks of all kinds, are invited t last season, which is worthy on attention. This consisted in standing up every other pipe of his drill in seeding cheerfully. one acre, which made the rows twenty inches apart, while all the rest of his crop was sown as usual, ten inches apart. In the Spring he ran a one-horse hoe harrow through the sown wheat only onge, which seemed to give it a freelf start in its growth. At harvest he harvested twenty-two bushels from that acre, while the rest of the field only vielded nine to the acre. The season, he says, was a very poor one, and his ed was bad, but the experiment was very encouraging. - North Western

OATS FOR STOCK .- An old farmer informs us that after an experience of forty

CASH COMPOUND INTEREST NOTES and
COUPONS. years, he finds no food so good to keepin good heart, and especially for cows and sheep when coming in, as

A WASH composed of lime, salt and fine sand or wood ashes, put on in the ordinary way of whitewashing, renders a roof fifty per cent. more secure against aking fire from falling cinders in case of fire in the vicinity. It pays the exnac a hundred fold in its preserving influence against the effects of the weath | THE LARGEST ASSORTMENT OF TIN-WARE The older and more weather-beate the shingle, the more benefit derived.

A CERTAIN insect lays 2,000 eggs, but aingle tomtit will deatroy 200,000 eggs in a year. A swallow devours 548 insects in a day, eggs and all. A sparrow's nest was found to contain 700 pairs of the upper wings of the cockchafer, though other food was procurable in abundance. So save the birds.

A CORRESPONDENT of the Ohio Farmer thinks a sow should not be allowed to breed until at least a year old. He thinks that until the boar and sow reach the age of four or six years, their progeny is better than from young hogs.

COTSWOLD sheep are said to be in great er demand in England now than ever fore. At a late sale, 55 rams average \$150 in gold.

A BRUTE'S SAGACITY.-The York True Democrat says that recently some cattle got on the track of the N. C. R. W. near West Fairview, Cumberland county, as the fast freight was going South. The usual alarm drove all from the track partner, Wm. Guinn, and now continues the of about 850 pounds weight. The ani-mal-ran ahead of the train up to the edge of the bridge crossing Conodoguinet corner of the Ballroad and North Stratton Street creek, and at a glance the brute saw she | Thankful for past patronage, he will endeavor to could not cross on the railway track, and deserve its continuance, by prosecuting the busi sprang upon the abuttment. As the engine came abreast of her, she plunged head forement into the creek below, a distance of 65 feet, into about 7 feet of water. To the astonishment of all who for the prompt filling of orders. witnessed it, the animal came up out of He also continues the the water, swam to the shore, and es caped to a harn-yard without any special harm having resulted to herself.

A CURIOUS WEAPON OF DEFENCE. The carrying of weapons is forbidden in | Coal constantly on hand, France to persons in civil life, but an invention has been made which, while conforming with the law, is a partial aid se a means of defence against night robbers. It consists of a small horn inserted in the end of a cane, which contain an electric battery and a small lamp with two powerful reflectors. The in tensity of this light, it is said, temporarily blinds any person at whom it is pointed. The lamp is kindled at will, by pressing a small knob at the other end of the stick, which communicates with an

Show Storms in April.—A correspondent of the Boston Transcript shows that If not said before its lets of December, the Books snow storms in April are the rule rather than the exception. In the last iwenty—the storm is not the storm of the last in the last in the last in the storm of the last in the storm of the last in the last firm of McCURDY & DIEHL. Snow Storms in April.-A corresponsnow storms in April are the rule rather than the exception. In the last iwenty-five years there have been but nine in which we had no snow in April. Lest year we had snow a late. year we had snow as late as the 24th.— The same correspondent figures up fortytwo snow atorms in Boston. THE first work of grace is the desire of
