RAPID GROWTH OF CORALS.—An interesting fact has recently been discovered respecting the growth of corals. Somewhat less than two years ago, Capt. McGregor, of the steamer Kilanea, moored a buoy in Kealakekua Bay. Recently he was ordered to hoist the anchor and examine the condition of the chain. The latter, which is a heavy two-inch cable, was found covered with corals and oystershells, some of which are as large as a man's hand. The larger corals measure four and a half inches in length, which represents their growth during the period of two years that the auchor and cable have been submerged. The specimen that we have seen shows the nature of its formation by the little coral insects more discovered.
