

The sea bath in beads,
The heavens have their stars,
But my heart hath its love.
Great are the sea and the heavens,
But greater is my heart,
And brighter than peaks or stars
Sparkles and glows my love.
Come you forth little maiden,
Come to my mighty heart,
My heart and the sea and the heavens
Are smiling away with love.

Farm, Garden and Household.

WHEAT ON STEEP LAND.—A large and increasing breadth of water-logged soil is now being planted with wheat. Whether it is best to plow such land once or twice depends on circumstances. As a rule, we think it best to plow it once, and then to harrow and mix immediately after the crop is gathered, and again just previous to sowing. On light sandy soil the wheat will grow best, and to cultivate it to start the weeds, and fallen grain, and plow as soon as they have germinated. Then harrow and sow the seeds in rows and mellow by the use of the cultivator until it is time to sow.

Cows.—During the hot weather in August, says the *Apprentice*, the flow of milk is apt to fall off considerably, and it is difficult after a while to bring it up again. Bran and sprout-feed are an usual cheap, and can be used to great advantage. Or own plan is to keep a very trough of water in the stable, and mix as much milk-feed with the water every day as the cows will drink. It pays in the measure, in the increase of milk, and in the health of the cows. If you have any green corn now is the time to feed it liberally. If very succulent, let it with a little, and if very large and coarse, give it sparingly, rather deficient in nutrient, let the cows have enough corn-meal to make the fodder as nutritious as the best pasture grass.

Kennel Bars.—It is by no means impossible to keep a kennel as neat as a garden, if one owns a moderately large garden. Many persons are deterred from keeping dogs in such close quarters from the fear of bad odors. It is, however, known that the best never stinks if care is taken to handle them gently in the various manipulations that may be necessary. It is recommended that one gets them into the habit of lying at every one who comes near. They should never be disturbed until you have caused them to fill themselves with German sausage which may be handled with impunity, if care is used not to hurt them. There are no better food for the dogs than the village garden with their produce of flowers and the out-look covered with various wild flowering plants. Any one who has a kennel should be provided with a variety of flowers. Some of the best are, indeed, some of the best. One should also have a supply of water. One should also have a supply of water. One should also have a supply of water.

PASTURE PLOTS.—The chief disadvantage in fattening pork, says the *World*, should be on good pasture. Good pasture is not to be had in all parts, but all kinds of pasture are relished by swine, and they thrive on it as readily as on other food. It is not economical to keep hogs on a large tract of land, but if they have good pasture just as cattle or sheep or horses. They must be fed on the pasture, and if they are not fed they will gladly do it if the pasture is good and supplied with water. An acre or two of corn to each head is, however, highly profitable. In fattening hogs, great deal of unnecessary labor is given. Instead of going to the fields and gathering, hawking, and hawking, the corn to be used in the pasture should be made to do their own harvesting and to feed them. Portable or movable fences should be ready on any farm to partition off a portion of the field as the owner thinks can be most profitably used by the hogs. In this the hogs are turned as soon as the corn is ready, and they will take care of themselves. Many think a great deal of waste will thus occur, but such is not the case—the hogs will take care of themselves. They soon learn to knock down only what they want to eat, and they will pick up the grain clean. The stock hogs are afterward fed in the same way.

SOME HINTS.—Says Mr. Harris: I have generally aimed to sow wheat from the 10th to the 15th of September; and in ordinary years, on good land, this is the best time, but in some years, the early sown wheat is the best. And drilled wheat is very decidedly better than that sown broadcast. I have never seen an enthusiastic sower of wheat, but have seen wheat sown broadcast just as good as that with a drill. But few will claim that broadcast wheat is ever better than drilled. And the reason is, we have a reason in which drilled wheat is better than broadcast. It is that drilled wheat is better than broadcast. It is that drilled wheat is better than broadcast. It is that drilled wheat is better than broadcast.

THE FARMER.—A fashion journal says the effort to banish plowmen will fail. These garments are so easily made, so graceful, so convenient and comfortable, that ladies will not turn away from the waist-banded, and worn with an apron front and blouse, will bring into favor the polonaise and the gown, in which the blouse and apron are connected therewith. These gowns are also connected with a wire which accompanies the rope, by means of which the front of the gown is kept in position behind, dispensing with the long lack breast-work used. A fully lined skirt is worn with the gown, and is displayed on the sides and back, making very dressy costume. Plainer suits will have the simple style redingote dress with Madras or white muslin, worn without drawers.

TO OBTAIN WATER FROM GREAT DEPTHS.—An apparatus has been recently devised in Germany for obtaining specimens of water at any desired depth of the ocean, and the water is drawn up in a vertical tube, and is drawn up in a vertical tube, and is drawn up in a vertical tube.

THE BARRAGE.—The barrages of the St. Lawrence river are now being completed. The work is well advanced, and it is expected that the river will be opened to navigation in the spring. The work is well advanced, and it is expected that the river will be opened to navigation in the spring.

Caught by a Boa Constrictor.

After breakfast we started for theagoon. We had set our traps on the banks of the river, and were still raising them, when we were stopped by the Justice of the Peace referred to in the matter about his name or where he belonged, and the excellent attributes of his justice. He was a man of no occasion he forgot his magistratorial integrity. He let down in a weak moment, the judicial bars which should have kept him in an ornate field of Bacchus. In short, on a recent occasion he imbibed too much strong drink, and in consequence awoke with a recollection of the kind, and for some time he was in the hands of the law. Now, here was a pretty good. A Justice of the Peace had been on a bender, or part of one. A man who was appointed to swing the ball of justice over the heads of poor unfortunate folk, wandering over into the wrong pasture himself. But that was his misfortune, but that was his misfortune.

An Impartial Judge.

Old Osego county, says a *Times* paper, boasts a Justice of the Peace who has often in the annual of local fame as an impartial judge. His name is John G. Trindale, though they have been exterminated through the rest of the West Indies since the days of the *Yere Labat*. That good physician speaks of them in his delightful journal as already rare in the year 1695; and now, as far as I am aware, none are to be found north of Trinidad, and the Spanish Main, save a few round Cuba and Jamaica. We were anxious to see, if not to get, a boa-constrictor of one kind or other; for there are no such in the island which may be seen alive at the Zoological Garden in the same cage. The true boa, which is here called Mahajani, is striped as well as spotted, and is found in the island of the Heullia, Anaconda, or Water-boas, bears only a few large round spots, both are fond of water, and the latter living almost entirely in the water, with a very large size and both are dangerous—not to children and small animals, but to the people of the island, and possibly within fifty yards of the place, there was no doubt. One of our party had seen with his own eyes one of the latter, and he was killed, with a whole kid inside it, only a few miles off. The brown polecat, crossing an arm of the Guanapo which is a mouth before we had been in the field of excitement, he had seen on one bank which his head was on the one bank which was on the other, and he was on the one bank which was on the other, and he was on the one bank which was on the other.

Remarkable Adventure.

Our citizens will remember how the showers came in frequent succession a few evenings ago, pouring torrents while they raising the water to the top of the street. Well, then, was at eight o'clock on that evening, seven men at the point in Sycamore, and Abigail streets to which is completed the great sewer. The water was up to the street level, and the men were struggling to get up Sycamore street. It had occurred to them that by stirring the sediment at the bottom of the sewer, the water would be cleared, and they were to do this, and their work in this way was greatly expedited. After a long session in the rain, they went into the sewer some distance, continued their work, and while so engaged, one of those heavy sudden showers which characterized the evening came up and poured down, forcing them to stop, and they were to do this, and their work in this way was greatly expedited.

The Ethics of Jeating.

A humorous paper has been going the rounds of the press lately, and in a paragraph of this sort descriptive to exceedingly and surprisingly staid that it has no hesitation about attributing it to one or another of those dry, weakish, and slightly eccentric, but not very English cousins are content to think funny. The paragraph reads:

The Prussian Jeantils.

The following is the order of the Emperor of Prussia, expelling the Jeantils from his dominions.

First.—The Order of the Society of Jesus, also orders all other establishments connected with the same, are hereby excluded from the territory of the German empire.

Second.—The members of the Order of the Society of Jesus, or of the orders and congregations of the same, who are foreigners, are expelled from the territory of the Confederation.

Third.—The Federal Council will take the necessary measures to insure the execution of this law.

Prize Bazaar, July 4, 1872.

Instructions concerning the execution of the law relative to the Order of the Society of Jesus.

CRISTOBALO'S EXQUISITE HAIR DYE.

It is the most complete preparation of its kind in the world, and its use is not only safe, but also beneficial.

WALKER'S VEGAN BITTERS.

These Bitters are the latest result of botanical investigation and pharmaceutical science, and are composed entirely of vegetable ingredients.
