hand, peas, radishes, lettuce, turnips, salsify, onions and beets will withstand the same conditions that destroy the first-mentioned vegetables and therefore can be planted at an earlier date.

A knowledge in respect to the correct season for sowing vegetables and securing a desirable succession of crops is all-important to the market farmer, whose success depends on gaining highest prices with products that meet the demand for them in season. For instance, spinach, kale and other extra-early greens are very welcome until lettuce is large enough for the table; while lettuce in turn loses favor when early peas ap-

large enough for the table; while lettuce in turn loses favor when early peas appear. Radishes are valuable only during the early season, there being little demand for them when cucumbers are at hand.

The depth to which seed is planted in the ground frequently determines its full development or its early destruction. The size of the seed controls to great extent the size of its covering. There is an old rule which limits the
