INTERESTING NOTICE. Two weeks ago our Fall Stock began to arrive, and to say that we were surprised at the way they turned out expresses it but mildly. Every where we hear words of praise and commendation. One lady from New York remarked : "I never expected to find such a store in Bellefonte." If you will be honest and candid and take a look we know that you will be astonished and have to acknowledge the same.

In Dress Trimmings, Pasamentries, Fringes, Heading Ornaments, Buttons, Buckles, &c., our line will exceed by far any of our neighbors. Our 51-inch dollar Dress Cloth for 75 Cents beats them all. The cloths are made by first-class makers-less eminent perhaps than Lupin but in quality and wear equal any made. We have but a limited quantity left-remember 54 inches wide at 75 cents, never before offered for less than one

dollar. We would be pleased to have you call, and feel sure that you will not regret it.

STEERING BALLOONS.

The announcement made a few days since that the problem of steering balloons had been solved was received with incredulity, and attracted little notice. It appears, however, to be a great fact. Two French engineer officers, Captain Renard and Captain Krebs, have for six years past been making experiments in an enclosed area in the Meudon Forest. The establishment was on the point of being closed for want of funds, but M. Gambetta, when President of the Budget Committee, obtained a grant of 100,000 francs. M. Herve Mangon reported to the Academy of Science that on August 9th these two officers mounted their balloon, steered it against the wind at a Both parties claim to have elected the height about thirty yards, to a given point at a considerable distance, not stated; then turning round and describing a cir-Honesty and Reform have triumphed cle of about 300 yards, returned straight

Such an important secret is not likely long to be kept, especially as experiments on a loon appear in the papers. It is in the shape of a cigar, pointed at both extremities. A net hangs from it, containing seats for two geronauts, and directing apparatus and a rudder. It is stated that the force is obtained by a series of electric accumulators of ten-horse power,
