BAILWAY ETIQUETTE.

Timely and Important Rules of Conduct for the Benefit of Those Who Don't Know How to Behave Tuemselves in a Sleeper or Dining Car.

BY BILL NYE.

Many people have traveled all their lives and yet do not know how to behave them-selves when on the road. For the benefit and guidance of such, these few, orisp, plain, horse sense rules of etiquette have been framed.

In traveling by rail, on foot, turn to the right on discovering an approaching train. If you wish the train to turn out, give two loud toots and get in between the rails so that you will not unna with a table of that you will not muss up the right of way. Many a nice, new right of way has been ruined by getting a pedestrian tourist spat-

tered all over its first mortgage. If you are prone to drop to sleep and breathe with a low, death rattle, like the exhaust of a bath tub, it would be a good plan to tie up your head in a feather bed and then insert the whole thing in the linen closet, or if you cannot secure that, you might stick it out of the window and get it knocked off against a tunnel. The stock-holders of the road might get mad about it,

holders of the road might get mad about h, but you could do it in such a way that they wouldn't know whose head it was. In the dining car, while eating, do not comb your moustache with your fork. By all means do not comb your moustache with the fork of another. It is better to refrain altegether from combing the moustache with a fork while traveling, for the motion of the train might jab the fork into your eye and irritate it.

If you never rode in a varnished car before, and never expect to again, you will probably roam up and down the car, meandering over the feet of the porter while he is making up the berths. This is a good way to let people see just how little sense you had left after your brain began to sof-

Never walk through a car staring everybody out of countenance, like Jim Crow detective hunting for the James boys, but mind your own business, be quiet, polite and patient, and SEE THAT YOUR TICKET TAKES YOU OVER THE GREAT ROCK IS-LAND ROUTE. Then you will feel as though you were among friends ALL THE FIME, and you will leave the train with a pang of genuine regret.

Manure is the keystone of all good farming. Add to the compost heap.

à Baggage Master Says.

SYRACUSE, N. Y., June 11, 1883. "Was troubled with weakness of the kidneys and bladder. I was obliged to leave my post at the station. Doctors and medicines gave only temporary relief. I tried HUNT'T [Kidney and Liver] REM-EDY (and it helped me, doing more good than all others combined."-P. H Palmer, Baggage Master, N. Y. C & H. R. R.

Because

Is a woman's reason and if that is the only reason why you have not tried HUNT'S [Kidney and Liver] REMEDY, as you have not been benefited by other medicines, you have not done right.

Mrs. Julia H. Brundage, Bridgeport, Conn., said: "My mother has for over thirty years been afflicted with kidney, liver and heart diseases. She walked out this summer for the first time in years. We feel that we owe much to God's mercy and HUNT'S [Kidney and Liver] REMEDY.

In selecting breeding animals look to form and perfection before large size.

The Half was Never Told

sors has been devised by Herr Sievert, of Dresden. The blades are represent-ed by two circular steel knives, which is pressed by the hand, two pendant slightly overlay at the edges and are valves before the aperture are raised pressed together by two spiral springs. The knives are fastened to a pair of during which the light can penetrate wooden rollers, with India rubber rims which grip and guide the cloth or paper as it passes between the knives, so that the latter may cut straight. These cut- mechanism can be so altered that the ters are carried by two handles or levers, which are held in the hand, and the outting is effected by pushing the scissors forward so as to cause the rollers to jects, so that with a one-twentieth sec-

Disc Scissors .- A novel pair of seis-

revolve. A Belgian engineer is said to have

invented a process by which he can weld steel at a red heat. He keeps an essential portion of his method a secret. It seems, however, that he carefully polishes the surface to be united, smears them over with some sort of liquid, feet below the surface in the wilderness raises the temperature of the metal to redness, and then joins the pieces. After severe tests bars welded in this depreciate the value of the oil above way were in no instance broken at the ground (30,000,000 barrels) 30 cents pgint of juncture.

Rupture, Breach or Hernia.

New guaranteed cure for worst cases without use of knife. There is no longer any need of wearing awkward, cumbersome trusses. Send two letter stamps for pamphiet and references. World's Dispensary Medical Association, 663 Main Street, Buffalo, N. Y.

The more the feed can be varied in feeding sheep, the better will be the results.

Is It Not Singular

that consumptives should be the least apprehensive of their own condition, while all their friends are urging and beseeching them to be more careful about exposure and oversloing. It may well be considered one of the most alarming symptoms of the dis-case, where the patient is reckless and will not believe that he is in danger. Reader, if you are in this condition, do not neglect the only means of recovery. Avoid exposure and fatigue, be regular in your hab-its, and use faithfully of Dr. Pierce's "Gol-den Medical Discovery." It has saved thousands who were steadily failing.

Look well to the surface drains in the grain fields see that they are kept open.

Don't hawk, hawk, blow, spit, and dis-gust everybody with your offensive breath, but use Dr. Sage's Catarrh Remedy and end it,

Slanting with a drill, instead of sowing broadcast, saves one-third in seed.

AN ITEM OF INTEREST .- "Beeson's Arcand heals skin diseases, softens and beauti-fies face and hands. 25c., by Druggists, or by mail. Address Wm. Dreydoppel, Philadelphia, Pa.

ond of illumation the explosure for the sky is not excessive.

The Scientific American says: "The history of the oil trade in this country does not furnish a parallel to the effect of recent developments. The result of the penetration of a certain rock 1600 per barrel, or a total shrinkage of \$9,-000.000, and to enrich a few and impoverish many. When the oil rock was pierced on May 18, the yield was 1400 barrels per day. To-day it gives 800 farming purposes would do well to see barrels. Three other wells near it pro-if it is suitable for growing corn, for if duce from 2000 to 3000 barrels daily, it is there is a far better chance for an and they have all been bored since May. advance in value than if it is fitted only A town has sprung up near the wells, and it has been called Garfield City. for the small grains.

serving meteors at the summit of the of stock is more profitable, In starting Puy de Dome has been read by M. a flock, a few superior animals should Alluard before the Academy of Scien-ces, Paris. A circular terrace with bal-of inferior ones. The increased value of ustrade has been formed around the a flock range from good sheep, will tower. The balastrade is divided into greatly exceed the increased cost of a 360°, the north being marked zero, and few good ones to start with, over what the localities all around are referred to inferior ones would have cost. Start this gradation. Two terrestrial tele- with good sheep and keep them good scopes are supported on chariots run- or make them better by generous keepning on ralls round the terrace. Geo- ing. If one intends to half starve his graphical maps are constructed having sheep he might as well begin with halfconcentric circumferences round the starved ones, as they would be more Puy de Dome. The origin and course likely to "hold their own" than those of any meteor, thunderstorm, mist, &c., used to better keeping. Sheep-keeping,

Thus year the Council of the Society of Arts, London, awarded the Albert Medal to Louis Pasteur, Member of the Institute of France, for "his researches in connection with fermentation, the preservation of wines, and the prevention of zymotic diseases in silkworms and domestic animals, whereby the arts of wine making, silk production and agriculture have been greatly benefit-ed." This medal, a memorial of Prince Albert, instituted in 1862, is given annually for "distinguished merit in promoting arts, manufactures or com-merce."

If you have an opportunity to do a generous action, do it. It is a very pleasant reflection to go to sleep with,

HOOD'S SARSAPARILLA

AGRICULTURE.

COBN AND WHEAT LANDS. - Land suitable for growing corn increases in value yearly, and is much more desirable to own than wheat lands. Wheat can be raised on nearly all kinds of soil and in nearly every part of the earth, but the United States has a practical monopoly of corn, as it has of cotton, hence in the markets of the world it does not meet the same competition as wheat. Last year we raised 1,800,000,sky and the clouds-acts in a much 000 bushels of corn. If evrey bushel shorter time than that from other obwas sold it would net our farming class taking the year through, probably 40 cents a bushel; that is, over \$700,000,-000; bu⁴ this does not tell the whole story, for corn is fed to hogs and cattle and used in manufactures, and as pork, meal, whisky, glucose, brings over two thousand million dollars in the markets of the country. It is, in fact, by far the most important of our agricultural products, grass and hay perhaps excepted. We narvested 512,000,000 bushels of wheat last year, but it brought so low a price, due to the competition of other countries. that our farmers suffered heavy losses, and less wheat but far more corn will be grown next year. Those who think of buying laud for

KEEP SHEEP .--- At least a few sheep A description of the method of ob- should be kept on every farm. Nokind however, is not profitable when the starving process is adopted, and we would not recommend it to farmers who practice any such methods. When good sheep are purchased to start with and are well kept, sheep-keeping is profitable, beneficial to the farm, and is to be commended.

> THE EYES OF POTATORS.-A potato has three crops in itself-an early, a middle and a late one. The cluster of eyes at one end will ripen one to two weeks earlier than the central eyes. The two or three eyes immediately surrounding the root end should in all cases be discarded in growing for home use or for market. They produce mostly small potatoes, and if large they are watery and soft. My usual method is to set one man to cut off the root end, and another to cut off the "eye end," thus forming three heaps. The root end heap goes to the hogs. My great o get them c

The question of the existence of earth tides or oscillations of the earth's crust corresponding to those produced in the sea by the attraction of the moon, is being investigated by a British commission. A pendulum is so suspended that its slightest motion turns a mirror and causes the point of light reflected by it upon a distant screen to move very perceptibly. The pendulum is proved to be in continual change of position, for the motion of the reflected light is incessant, and so irregular that it is hardly possible to determine its mean position on the screen within five or six inches.

M. Jacquelain insists strongly on having purer carbon for electric lighting purposes than can be obtained through the calcining of wood. Siberian graph itoid when purified doubles the luminous capacity it has in its natural state, and exceeds the brightness of pure artificial carbon by one-sixth. To separate impurities he recommends three methods: First, the action of a jet of dry chlorine gas directed on the carbon raised to a light red heat; second, the action of potash and caustic soda m fusion; and third, the action, of hydrofinoric acid on the finished carbons,

All know that air has weight, but one is apt to have rather vague ideas as to the weight of comparatively limited quantities of it, A cubic foot of com-paratively limited quantities of it. A subic foot of air weighs 538.1 grains, cubic foot of air weighs 538.1 grains, or something over ounce; 13.06 cubic feet weighs one pound. About 65 feet of orbic air furnish one pound of oxy-gen. An apartment 8 feet high, 12 gen wide and 13 feet long contains bout 100 pounds of air; and a room 40 feet square and 18 feet high contains about a ton.

For DYSFEPSIA, INDIGESTION, depression of spir-its and general debility, in their various forms; also as a preventive against fever and ague and other intermittent fevers, the "Ferro-Phosphoratod-Elixir of Chisaya" made by Caswell, Hazard & Co., New York, and sold by all Druggissis, is the best tonic; and for patients recovering from fever or other sickness, it has no equal.

All live stock should be kpet in a healthy and thriving condition at this season.

tive it can be plowed up and winter feed grown by sowing corn, millet or Hun-garian grass. A mixture of the two last named produces more and is less liable to fall down than either alone. An acre of millet will give twice as much feed as an acre of average meadow. It is very fattening for horses, as its numer-ous seeds make the feed almost as rich as grain with common hay. It is on this account better to feed small quantities of it with other hay or straw. OSPHAT

As BETWEEN hens and ducks as eggproducers experiments lately in France show as follows: Three ducks and three hens were selected. Between the first day of January and the end of August the three hens laid 257 and the ducks 402 eggs. Moreover, in the autumn months of the previous year the ducks had yielded 215 eggs, while the hens had completely ceased laying. Alto-gether, therefore, the ducks had proluced 617 eggs within the twelve months as against 257 obtained from the hens.

THE cattle industry of the Northwest s still in its infancy, not being ten years old. A vast extent of country is yet antenanted save by the wild animals, and the 27,000,000 acres of Indian reservations in Montana must also be dejucted from the available grazing begun to be settled. Montana has a little over 1,000,000 head of beef cattle at present, and is capable of supporting 10,000,000 head.

THERE is little choice between Wyandotte and Plymouth Rock fowls. The two breeds resemble each other in sev-eral ways. Both mature early. They are of much the same size and shape, and lay about the same sized eggs. Both are hardy, and quiet and thrave in confinement. As a general purpose fowls of either breed may be selected,

THE chief difficulty in teaching calves o drink from the pail arises from too great haste. Let the call become hunry, warm the food to the temperature of new milk, give it the finger to suck, but only for a moment, and the calf is easily taught to drink.

In plowing use a sub-soller to loosen In plowing use a sub-solier to loosen the hard pan, or else gradually bring up the heavy clay by sinking the plow a little deeper each year. Another profit-able way is to give two plowings, first bringing the clay to the surface and then throwing it back again.
