THE straw covers that are put around claret and other bottles can be made use of for decorating our rooms, and are the pear, yet where the orchards are a pretty addition to the corner that side by side the same treatment is usuwould otherwise be forlorn and unoccupied. Select those covers that look fore the new varieties were known, fresh, and turn them with the pointed end down and open end up. Fasten them together, side by side, with a few stitches, or better still a hairpin, which may be passed through the straw covers, and bent, to keep them in place. Take a third cover, hold it in the same way, with the open end up, and fasten it between the two destruction. first covers, a little below them. A large bow of gay-colored ribbon may now be added, either to the ends of the covers or else half way on the middle of the center one. This arrangement may now be fastened to the wall and filled with bunches of pampas grass, everlastings and any of the fancy grasses them into fashion.

ficient number of ripe tomatoes and cut spring, while the quantity of potash a thin slice from the stalk of each. to break the outside of the fruit. Press the tomato pulp through a sieve and mix it with a little pepper and salt, two ounces of ham previously cooked and finely minced, an onion chopped a baking tin; cover the tops with seasoned bread crumbs, and bake in a dish with them. For a change the tomatoes may be filled with any kind of cold meat, poultry or game, finely minced and pleasantly seasoned. Prepared in this way they form a most delicious delicacy.

HOMEMADE CREAM CHEESE,-Put a scant teaspoonful of salt into one pint of sweet, thick cream; stir into it, having previously slightly warmed the cream, a tablespoonful of rennet, and pour the whole into a scalded and cooled linen cloth, which has been laid into a soup plate. Let it remain in a warm kitchen for twelve hours; then change it into a clean cloth, wetted as before, and remove it into a cool dairy or larder. Change the cloth daily until the cheese begins to be firm to the touch. Smooth it with a wooden knife into a perfectly round shape and lay it on a clean plate. Turn it every day until it begins to look buttery and yellow, when it is fit for the table.

Chop the suet up un- | it can eat. eggs, one lemon. til very fine and add the bread crumbs, the sugar, the salt, the grated zest of for the pudding to swell. Then plunge it into boiling water and let it boil briskly for from four and a half to five hours or until done.

tomatoes on toast: Take six or eight remedy, and the tree may be saved. ripe tomatoes; cut away the stalks and any green part there may be; take out the seeds and cut the tomatoes into thick slices; arrange these in a single layer on a greased baking-tin; sprinkle over them some finely sifted bread crumbs, seasoned with salt and pepper; put a little piece of butter on each slice, and bake in a brisk oven for fifteen minutes. Serve them on neatly the gravy that is in the dish with them he finds that the cows kept in the stapoured over; some consider a few drops | ble gave the most milk. of lemon juice an improvement.

WATERMELON CAKE .- One cup of white sugar, one-halt cup of butter, one-half cup of sweet milk, whites of four eggs, one-half teaspoonful soda, one of cream of tartar, two scant cups of flour, one fourth cup of sour milk, two thirds cup of pink sugar, one fourth cup of butter, one-half teaspoon of soda, whites of two eggs, one tea cup of raisins, flour enough to make rather stiff. First and second half of recipe to be made up separately, and mixed like marble cake before baking.

STEWED RAISINS .- Take one pound of best raisins, pick them free from stalks; cover in a dish with cold water, steep all night; put them in a stewpan point, then simmer until the skins are point, then simmer until the skins are would willingly pay a larger price for quite tender; turn into a dish to cool, poultry fattened by the use of charred and they are ready for use. This, with bread, is an excellent dish for persons of weak digestion or for invalids. If half a pound of figs, each cut in four parts, be stewed with the raisins, the liquor will be rich, syrupy and delic-

A NOTABLE housekeeper says that an economical substitute for butter may be easily made. Melt a piece of nice cloth into jars. Set it aside where it will cool quickly, where it may be used instead of butter for any kind of cake. Pound cake made with it is pronounced

BEEF BROTH -Take a leg of beef, water, skim it; put in two or three blades of mace, some parsley, and a crust of bread, boil it until the beef and cut into slices; put it in a dish; lay in beef and pour on the broth.

CARAMEL PUDDING. - Prepare mold by giving it a thick coating of tent of opportunity. caramel sugar; when this has set, pour into the mold a custard, made of the yelks of eight eggs and one and-a-half pints of the best cream; steam for one oil or kerosene, will protect it from hour and erve wa n oit.

FARM NOTES.

THE peach tree requires cultivation entirely different from that needed for ally given both. In former days, bepeach and pear trees were hardy, and lived for quite a long period, but with grafting and budding the conditionsnecessary for success seem to have been changed. The blight with the pear and the yellows with the peach, are the great obstacles in the way, while the borer also does his share of the work of

Compared with the pear the peach requires clean cultivation. The orchard should first be plowed and well worked with the harrow before planting the trees and the ground kept clean of grass and weeds. No manure should be used unless it is in the shape of wellrotted compost, but marl and muck, which can now be had for decorative that has been used as absorbent materpurposes. These bouquets are called ial, is of advantage. The best fertilizer 'Makart bouquets" after the celebrated | is either muriate or sulphate of potash, painter who passed much of his time about 200 pounds per acre, using, at the grouping and arranging them, and who same time, about 100 pounds of superwas mainly instrumental in bringing phosphate. No nitrogenous fertilizer is necessary the first two years, but after the trees begin to bear 100 pounds of STUFFED TOMATOES .- Take a suf- nitrate of soda may be applied in the kill any plant to which it is applied, es-Remove the insides, being careful not The mode of application should be to feed them. When fermented with Something depends, however, upon the borer must be watched and never alvery small, two tablespoonfuls of sifted lowed to effect a lodgment in the tree, | tion goes on in the soil before the roots bread crumbs, a few sprigs of fresh and the first signs of decay in any porparsley well washed and shreded fine, and tion of the tree should at once call for a well-beaten egg. Send a insects on the peach trees. Wood little good brown gravy to table in the ashes and ground bone also make excellent fertilizers.

> THE bulk of cream is no guide for anything, so much depends upon the quality of the milk, the method of separation, the time occupied in doing it, the temperature at which the cream is raised, the amount of milk taken with the cream in skimming, the condition of the cow, the quality of the feed, the length of time from calving and the individual characteristics of the cow. If the cow is in poor flesh and half-starved the butter globules are poor in fat. On the contrary, if the cow is in good condition and abundantly fed with good nutritious food the globules will be rich in fat and fine-flavored.

If the pigs are on clover they will need no food except at night, and although they may not fatten very fast, they will grow rapidly. The night's meal, however, should be complete, and of acetate of iron and pressing in an should be composed of ground oats, ordinary copying press. Old writing four parts (by weight); cornmeal, one may also be copied on unsized paper, part; middlings, three parts; bran, two if wet with a weak solution of sulphate SUET PUDDING. -Three quarters of parts; linseed meal, one part, with a of iron, mixed with a small solution of a pound of suet, three-quarters of a little salt. To a correspondent who complains er day for the first time." the lemon together with its juice of his apple trees blossoming, but not (strained) and the eggs beaten, Mix bearing, Orchard and Garden suggests all the ingredients well together and that he throw a few pails full of boiling tie in a cloth, allowing sufficient room | hot washing suds against the trunk of the tree. This liquid, running down and soaking into the ground among the roots, not only kills infurious insects and prevents the borer but also feeds the tree and stimulates it to renewed An English lady writes concerning action. Lose no time in applying the

MR. J. S. WOODWARD, of Lockport, N. Y., says he has discovered from this winter's experience that milch cows need little or no exercise during cold weather, if provided with warm quarters. He proved this to his own satisfaction by turning out thirty of his cows to drink and exercise in cold weather while the remaining twenty-six cut pieces of hot buttered toast with were allowed to stay in the stable, and

THE importance of lime as a plant food, to be supplied by its use as a fertilizer, may be perceived by the following figures: In twenty-five bushels of oats there are nine pounds of lime; in thirty-eight bushels of barley, nine pounds; in two tons of clover hay, thirty-five pounds; in twenty-five tons of turnips, 140 pounds; in 250 bushels of potatoes, 270 pounds,

CHARCOAL is appreciated by fowls of and fed once a day, would no doubt pay for the trouble in the increased product of eggs. In fattening the process is much hastened by its use, and we think the meat much more palataand bring the water to the boiling ble. There are many epicures who

RANK-flavored foods make rankflavored meat. Wnatever you give your hogs-and they are expected to devour all kinds of refuse-be sure it is clean and not putrid. The finishing off do as manifestly kill themselves, as sweetest and nicest feed that is ever | themselves. given to hogs. Corn meal and the refuse of the dairy are good. Good, fat pork, and strain it through a thin sweet, wholesome pork is the product of cleanliness and sound, clean feed.

A good animal should be a heavy feeder. It has often been considered an advantage that an animal eat but little, but just the opposite should be desired. It takes a liberal supply of cut it in pieces; put it into a gallon of food and a good appetite to derive the greatest amount of product.

ALTHOUGH flat turnips are mostly sinews are tender. Toast bread and water, there is nutriment enough to make them an important addition to food for cattle and sheep, and it is therefore desirable that in a season of scarcity they be raised to the full ex-

Two ancient beverages are being introduced into Great Britain on account of their supposed medicinal virtue. Palm wine, or lakmi, is made from the sap of the date palm, Trees in full vi- New Jersey. "Oh, no; I understand," gor are selected for tapping. The juice escaping from the wound is conducted by a reed into an earthenware pot, and may amount to nearly two gallons daily at first, gradually sinking to about half that quantity toward the end of the tapping, which is seldom allowed to exceed a month. Much of the "wine" is drunk fresh, when it resembles sparkling cider, but becomes insipid after losing its carbonic acid. Its color is opalescent and milky. After undergoing alcoholic fermentation it contains 4.38 per cent. of alcohol, .22 carbonic acid, and 5,60 of mannite. The Moors make extensive use of a spirit prepared from the water in which comb is boiled in treating beeswax. This water, being impregnated with honey, is allowed to ferment, and is then distilled; the spirit is called maharga. It is flavored with anise-seed or with naffa-that is, fennel acid.

Fresh animal excrement is not food for plants. If diluted with water and poured about their roots it will often for a time do more harm than good, In fact, very strong urine will usually pecially if an annual. Its effect is to rot and burn the roots rather than to broadcast the fertilizer over the entire other fertilizing matter this acid condisurface instead of around the trees. tion is changed and the compost becomes intensely active in stimulating character of the soil and climate. The growth. In applying large amounts of stable manure per acre some fermentareach the manure.

A physician says that a great deal of what passes for heart disease is only mild dyspepsia, that nervousness is commonly bad temper, and that twothirds of the so-called malaria is nothing but laziness. Imagination, he says, is responsible for a multitude of ills, and he gives as an instance the case of a clergyman, who, after preaching a sermon, would take a teaspoonful of sweetened water, and doze off like a babe, under the impression that it was a bona fide sedative.

In the Botanical Garden at Berlin flowers, fruits and other parts of plants are preserved by keeping them for a time in a saturated solution of alcohol and salicylic acid (reduced by four times its bulk of water), and then removing and drying them. It is said that vegetable matter treated in this way preserves its natural appearance, and never turns black. The plan is considered particularly valuable for orchids and other succulent plants.

Printed matter may be copied on any paper of an absorbent nature by dampening the surface with a weak solution
