RAISING SPRING CHICKENS .- A poultry raiser in New York state gives his method in raising chickens for the early market as follows: To begin I conclude that to raise chicks for profit I must raise them early and to do so I must have the eggs and to get the eggs must have fowls that would lay in cold weather. In running the incubator I keep the eggs at a regular heat, not over 105° or below 102° for long per-10ds, (1030 at top of eggs I think as near correct as can be). After the third day I draw out the drawer once per day and allow them to cool down to and also allow a little moisture, and after the ninth day I sprinkle once per day, until twelve days when I sprinkle twice per day until fifteen days when I sprinkle three times per day until hatched; after hatched I leave in the incubator until nicely dried off, when I transfer them to the brooder, a cheap concern that I made myself, where I keep in broods of about 100 where I keep them warm and feed very regular- sible by other methods. Such photoly a little at a time, at 6, 10 and 12 a. graphs may prove of great value in m., and 3, 6 and 9 p. m ; first on hard showing changes affected by drugs, as boiled eggs (the infertile ones from the incubator) then on eggs, and bread and crumbs boiled and raw rice, oatmeal, cracked corn soaked in milk, with a little pepper dusted over it, and as they grow I give whole oats, wheat covered in the sand, so as to make them exercise themselves; chopped onions, turnips, cabbage, apples, in fact everything | day and opened at night. that I think they would relish, as the expense amounts to scarcely nothing compared to the profits of spring chicken. I always give something green every day-grass, rye or lettuce cut fine with a big pair of shears, always keeping ground shells and bones in reach.

gardener who thinks too much watering gives it personal supervision. of pot plants is about as fatal as a lack of supply writes as follows: It will be evident that they require wetting if on taking the earth from the pot it crumbles like dust; a sure sign is to knock on the side of the pot near the middle, with the finger knuckle. If it gives forth a hollow ring, the plant needs water; if there is a dull sound, there is still moisture enough to sustain the plant. Plants must not be wet more than once or twice a day. On dry, clear days they require more water than on damp, cloudy days. On the other hand, the earth must not be allowed to dry out entirely, for that is also very injurious. If the earth gets too dry, it is best to place the pot in water, so that the water will saturate the soil very gradually.

Most kinds of insects find their fav-orite food by smell. Any powerful odor is therefore a preventive of their attacks, not, perhaps, because it repels them, but merely because it throws them off the scent. Acting on this hint a farmer who had a lot of cabbage plants mixed some land-plaster with a small quantity of spirits of turpentine. Small quantity of spirits of turpentine. One thousand! Jenny!" Julia said, Re left it several weeks, turning it "I'll double that the day we're used!" over and over, until every particle was scented. Then a little was sprinkled "And don't go back from what you've said." once or twice a week on the cabbage plants, and the white butterfly that lays | That night, the magic rites begin, the eggs missed them entirely; while other plants in the neighborhood not so treated were overrun.

It is well known that herbs cured in the shade are better than those that are sun-dried. It is the same with grass or other fodder plants. But it is impossible to make hay in the shade, and it | And sent, for darling Cupid's sake, is a good deal of extra work to cock it (Gourand T. Felix) a mighty slice of cake. up. It can, however, be thrown into windrows without extra work. A good plan is to rake up the hay as soon as it is thoroughly wilted-that is, while it not complain, and which there are no is in a moist, pliable condition-and let it cure from internal heat instead of from the direct rays of the sun. Of course, the surface of the windrow will be exposed to the sun, but all below will be curing in the shade.

INCUBATORS .- Those who contemplate the use of incubators next season | the benefits derived from using this remeshould have them soon and experiment | dy for the lungs and throat; and in giving with them this fall. It is expensive to use eggs worth 3 cents each next February when in three cases out of four the only result will be spoiled eggs and loss of valuable time. Hatch out a clutch or two now, while eggs are cheap and generally fertile. Learn the amount of heat, ventilation and moisture necessary for your machine. No two incubators are alike, and no directions are so valuable as experience.

BUMBLE FOOT .- The Poultry Yard gives the following remedy for a disease known as "bumble-foot:" As soon as the swelling ripens fairly, cut open the puffy protuberance and let out the gathered pus freely. To effect this thoroughly, the incision should be made cruically, thus, X, and quite down to the bone or ligament, beneath the skin. It is useless merely to prick the swelling. It must be cut through, cleansed of the matter entirely and washed in a mixture of alcohol and water, equal parts to cleanse it. If it gathers a second time repeat the process.

IF farmers will grow a field of fod-der corn they will find that it requires less labor in proportion to yield of produce than any other crop that can be grown. It may be sown very thickly in the rows and may be harvested just in the milky state, so as to arrest the nutritive matter in the stalk as it is passing on its way to the ears. Such a crop is quickly grown, needs no hoeing, can be cultivated one way, and can be carried as soon as cut directly to the barn for storage.

For working purposes the mule is more economical than the horse. It eats less and will do as much work.
Sickness among toem is an exception.
It costs less to keep them, less to shoe them—for their feet are much harder than those of the horse—and they are more patient than the horse.

POULTRY ranks among the leading industries of this country, and is more permanently established and less subject to influctations, and its capital is more evenly divided through the division of labor than in any other business in America.

The glaciers of the Alps have been regularly—a period of growth of 15 to 30 years being followed by a corresponding period of diminution. The time thoughtless generalization of unscientific humanity. While most fish prefer found by Forel to change in size quite of cold and wet years, and the decrease with periods of warm and dry seasons. Since 1875 the glaciers have been grow-

The botanical gardens, London, have succeeded in cultivating the curious kermes oak (guercus cocufera), which, when punctured by one of the eoccus insects, produces the ancient blood-red dye, supposed to have been used by Moses to tint the hanginge of the taber-The kermes oak is a dwarf, bushy shrub, somewhat resembling a holly, and grows profusely in Spain.

Instantaneous photographs of the hearts and intestines of various animals have enabled Dr. W. G. Thompson to determine the action of the organs more clearly and accurately than is poswell as in their physiological teachings.

Ceilars are usually damp because the walls are cooler than the air, which exist with unusual bodily vigor. The causes condensation of moisture, To prevent the condensation of moisture it Borrow turned quite gray before he is recommended that the windows and was thirty, but was an extraordinary doors of the cellars be closed during the swimmer and athlete at sixty-five.

Good ventilation at all times, by day health of poultry stock. Much of the No man should expect to profit by rais-WATERING PLANTS. - A German ing fine stock of any kind unless he

When you visit or eave New York City, save baggage expressage and \$3 carriage Hire, and stop at the Grand Union Motel, opposite Grand Cen-

athe Grand Union Hotel, opposite Grand Central Depot.

600 elegant rooms, fitted up at a cost of one million dollars, \$1 and upwards per day. European Plan. Elevator. Restaurant supplied with the best. Horse cars, stages and elevated railroad to all depots. Families can live better for less money at the Grand Union Hotel than at any other first-class hotel in the city.

As the snowdrop comes between snow and sleet, appearing as the herald of the rose so religion comes amid the blight of affliction to remind us of a perpetual summer, where the bright sun never retires behind a wintry cloud.

> Oriental. CANTO I.

One night, the poor disconsolate Young heires in her boudoir sate. "Would I were beautiful, or dead!" "Why so?" asked Jenny. "Don't you see De Smyth won't fall in love with me! What's gold to me? What's jewels? What The splendid mansion I have got? With half my wealth I'd gladly part, If I could win my Alfred's heart."
'Give me a thousand dollars, Miss,
And you shall have that much prized bliss." "'Tis done!" exclaimed the lady's maid

CANTO II. With a mysterious compound, which Made her complexion white and rich; Freckles and rimples faded away, Like darkness, at the smile of day.
"How was it done?" now fair Julia cries.
"I'll tell you how," the maid replies;
'That peerless skin's bright snowy gleam
You owe to Oriental Cream." To close the story, let me say The pair were married yesterday,

No one ought to remind another of misfortune of which the sufferer does

means proposed of alleviating.

It gives us great pleasure to state that the

merchant who was reported being at the point of death from an attack of Pneumonia, has entirely recovered by the use of DR. WM. HALL'S BALSAM FOR THE LUNGS. Naturally he feels grateful for publicity to this statement we are actuated by motives of public benefaction, trusting that others may be benefitted in a similar manner.

Actions speak more forcibly than words; they are the test of character. Like fruit upon a tree they show the character of a man, while motives, like sap are hidden from our view.

THE Indians have at last made a rapid and gigantic stride towards civilization. They advocate the use of Carboline, the great Petroleum Hair producer; it gives them an additional chance to collect scalps.

The interests of health are as much opposed to discontent as they are favored with by the calm spirit of content with the measures of good and happiness which fall to the individual

A Hard Fate it is indeed, to always remain in poverty and obscurity; be enterprising reader and avoid this. No matter in what part you are located, you should write to Hallett & Co., Portland, Maine, and receive free, full particulars about work that you can do and live at home, at a profit of at least \$5 to \$25 and upwards daily. Some have earned over \$50 in a day. All is new. Capital not required. You are started free. Either sex. All ages. Better not delay.

Adhere rigidly and undeviatingly to truth; but while you express what is true, express it in a pleasing manner. Truth is the picture, the manner is the frame that displays it to advantage.

Frazer Axle Grease. The Frazer Axle Grease received medals at the Centennial, North Carolina State Fair, Paris Exposition, American Institute, New York, and others.

It may be a paradox, but it is true nevertheless, that whoever understands the dependence upon others is likely to be the real independent.

The best cough medicine is Piso's cure for consumption. Sold everywhere. 25c.

It is he who has much and wants more that is poor, and he who has lit-tle and is therewith content who is

Mr. Grant Allen says the Lelplessness and awkwardness of fish out of water increase seems to coincide with periods | the water, many of them cut a better figure on dry land than most of their critics themselves would cut in midocean. There are fish that wriggle across the country intrepidly with the dexterity and agility of the most accomplished snakes; fish that walk about on open sandbanks, semi-erect on two legs, as easily as lizards; fish that hop and skip on tail and fins in a manner that the celebrated jumping-frog him-self might envy, and fish that fly through the air with a grace and swiftness that would put to shame hosts of their feathered competitors. There are even fish, like some kinds of eels and the African mud-fish, that scarcely live in the water at all, but merely frequent wet and marshy places, where they lie snugly in the soft ooze and damp earth that line the bottom.

> Many persons begin to show gray hairs while yet in their twenties, and some while yet in their teens. This does not by any means argue a premature decay of the constitution. It is a purely local phenomenon and may cocelebrated author and traveller, George

Prof. Stamford, the English Edison, has discovered a new substance which and by night, is highly essential to the promises to become a popular article of commerce. "Algine," a residuum of macerated fucas (seatang), combines the qualities of a mordant, an esculent, an't it?" "Cert. But, old man, what disease with which the birds are afflict- macerated fucas (seatang), combines ed may be traced for its origin to a the qualities of a mordant, an esculent, neglect in ventilating the fowl-house. and a superlative adhesive. It fixes a variety of colors used by cotton-dyers. In certain combinations it is as nutritious as grape sugar, while in one of its forms its adhesiveness exceeds that of gum arabic not less than 26 times.

The active principle of cod liver oil, of which it forms from one and a half to six per cent., has been obtained by Mr. Lefarge of Paris, and is said to have given excellent results when used in place of the crude oil. The substance is called morrhuol, and contains twelve times as much todine, bromine and phosphorus as the original oil, with none of the fat.

Most metals or alloys shrink or contract on cooling. But an alloy which will expand on cooling may be made of lead nine parts, antimony two parts, bismuth one part. This alloy can be advantageously used to fill small holes and defects in iron castings.

WORKHOUSE BOY (who had been apprenticed to a small farmer, brought up, as he had run away. Guardian—
"Did they beat you?" Boy—"No,
sir." Guardian—"Then why did you run away?" Boy-"Please, sir, soon after I got there a pig died; they salted it, and we had fur to eat it. Then a calf died, and they salted it, and we had fur to eat that; then master's grandmother died, and I seed 'em taking some salt upstairs, so I runn'd away.'

THE man who travels a thousand miles in a thousand hours may be tolerably quick-footed; but he is nothing to the woman who keeps up with the fashions.

No, Joseph, when the poet said something about pointing a moral and adorn-ing a tale, he did not refer to adorning a dog's tall with an old tin coffee pot.

The preparation of ultramarine is as

follows: The pieces of lazulite the most rich in color are picked out, they are washed and then plunged into vinegar, and if the color does not change the quality is esteemed good. The stones are then again repeatedly heated and plunged each time into vinegar. By this means they are easily reduced to an impalpable powder. This is then well worked up into a paste with rosin, white wax and linseed oil, to which some add Burgundy pitch. is then put into a linen bag and kneaded under water, which at first assumes a grayish color, resulting from the impurities that are first separated from the mass. The water is then thrown away and replaced by fresh and the kneading re-commenced, when the water becomes of a fine blue. This is poured off and allowed to settle, the precipitate being ultramarine of the finest quality. The repetition of the process furnishes color of teferior smaller in succession and of inferior quality in succession, and finally the residuum, being melted with oil and kneaded in water containing a little soda or potash, yields what is termed ultramarine ashes. The inalterability of ultramarine is a most valuable quality, but this years present. able quality; but this very property is injurious to the effect of old painting, for while the other colors have changed, this, preserving its original brilliance all harmony is destroyed, as may lobserved in many old paintings and
