A CONVENIENT CATTLE STALL. Each animal requires a space three to four feet in width, according to size. zletop. The platform upon which the animal "Ho long, including a space of one foot in width slatted, for the hind feet to he wouldn't have done it, would he?" stand upon. The spaces between the slats should not be more than threefourths of an inch in width. Every slat should be in a vertical direction. Under this grating a space four to six inches in depth is left open as far back as the solid floor. All that is liquid falls beneath, and can be scraped out with a hoe or tool made for the purpose. Behind the stalls a trench of eighteen them are." nches or two feet in width, and about sight inches in depth, is left for collecting the manure. Next to this again is eft a walk of convenient width hrough the stable. If desired another | the hand. set of stalls can be arranged in a corresponding position to this walk. The use of stanchions of course is optional. Many prefer the strap around the stall 'astened to a chain or rope.

FLOWER SEEDS .- A very common nistake in sowing flower seeds, as well is other seeds, is in covering too deep. As a general rule, cover only to the lepth of the thickness of the seeds, replied Mildred. or with medium sized seeds like palsams, zinnias, etc., a half an inch skin disease, from what Mrs. Smithkin or so is none too much. Such fine said." seeds as portulacos need only to be pressed into the soil with a piece of wood, or the palm of the hand. Always press the earth down firmly after sowing all flower seeds, else there my brother. is danger of their drying up before the roots can get a firm hold of the soil. Seeds of the hardier annuals may be sown where these are to grow, but, as a rule, it is preferable to transplant, as lady of another when they met on the street the plants are generally stronger and the other day; "I can't understandit. Then stand the drought better. During very you were pale, haggard and low-spirited, dry weather, and when the seedlings and I remember you said that you hardly cared whether you lived or died. To-day are first set out, they should be watered frequently. Provide some support for all such annuals as require it, or the plants will become weak and struggling | deed, and do not make the show they otherwise would. The weeds should be kept down and the ground loosened often, so that the plants will receive the full benefit of the rains and dews: which they will not if the ground is hour pass before procuring this wonderful allowed to become hard and baked. allowed to become hard and bake 1.

POTATO CULTURE .- Not a great many years ago it was the practice to plant whole potatoes in such quantities as to form quite a large percentage of the expected yield, which has been succeeded at the present time by the opposite extreme of planting single eyes. leaving ample room between the two methods for cultivators to experiment this result? Easily; cut down your doomethods for cultivators to experiment as to the amount of seed and the methods of cultivation from which therefore low-spirited, don't rush off to the the best results may be obtained. Owing to the short crop of last year, seed the other hand, wait until you are sick will be high, and it will be a good time abed before doing anything at all; but just to plant whole smail potatoes, such as go to the druggist's and for twenty-five have been given to the pigs in plentiful purgative Pellets. Take them as directed, years, and with many persons they have and our word for it, your unpleasant sympall along been preferred to cut seeds. Planting Irish and Scotch grown seeds will have no big doctor's bill to pay, and is unsafe, as those who have experimen. everybody interested (except the doctor), them generally represent them | will feel happy. as unsuited to our climate. extinct. As a late crop it is one of the sewn on a pink foundation frame. best varieties ever introduced. It should be revived by growing the seed in a new locality. It is well known as a variety that has luxuriant vine, producing its tubers only after the vine growth has been fully completed. The Early Rose is also departing, yet there is also departing, yet there is also departing to be congratulated. But he who escapes from the clutches of that dread monster, Con-sumption, and wine back health and happiare but few new varieties of early potatoes that excel it in quality and many others of the old tried varieties have been unequaled. By carefully Medical Discovery in time. For all scrof-selecting the seed they may yet be re-ulous diseases (consumption is one of tained.

DISEASES OF DIGESTION. DIGESTION. DIGESTION. DISEASES of the subscription of the subsc

KIDNEY DISEASES. BRIGHT'S DISEASE, DIABETES, and kindred maiadies, have been very largely treated, and cures effected in thousands of cases which had been pronounced beyond hope. These dis-eases are readily diagnosticated, or determined, by chemical analysis of the urine, without a personal examination of patients, who can, therefore, generally be successfully treated at their homes. The study and practice of chemical analysis and microscopical examination of the urine in our consideration of cases, with reference to correct diagnosis, in which our institution long ago became famous, has naturally led to a very extensive practice in diseases of the urinary organs.

CAUTION. These diseases should be treated only by a special-ist thoroughly familiar with them, and who is com-petent to ascertain the exact condition and stage of advancement which the disease has made (which can only be ascertained by a careful chemical and micro-scopical examination of the urine), for medicines which are curative in one stage or condition do positive injury in others. Being in constant receipt of numerous inquiries for a complete work on the nature and curability of these maladies, written in a style to be easily understood, we have published a large, Illus-trated Treatise on these diseases, which will be sent to any ad-dress on receipt of ten cents in postage stamps.
