FARM NOTES.

### HOUSEHOLD.

### SCIENTIFIC.

A MATTER OF ESPECIAL INTEREST TO FRUIT-GROWERS-NOTES.--Despite the experiments made at the exthe blight of the pear trees, and to discover a remedy therefor, the disease annually destroys hundreds of orchards and causes heavy loss to fruit-growers. Any light thrown on the matter is always welcomed by those interested. and in this connection the following letter, from Mr. C. S. Russell, Towanda, Pa., may be valuable. He savs:

Having myself practiced this method successfully for about twenty-five years, I think I can safely say it is almost a certain cure. I first satisfied myself that the blight was a bark disease, originat. ing in the outside bark, and causing it to dry and shrink, so as to stop the circulation of the sap. The inside bark seems to remain healthy until it with the mixture. is pinched by the drying of the outer bark. I found, many years ago, that the first indication of blight was in blood streaks in the bark, that could only be found by hacking or peeling with a knife. If the bark yields to the pressure of the hand it is well to use the knife to ascertain whether there are blood streaks in it, and, if found, the tree cannot be peeled too quick, being careful not to injure the inside bark. I use a large pruning knife for that purpose. I think I have not lost a tree since I commenced this way of treating them, unless it was too far gone before I discovered it; that is, the inside bark was injured. I have trees that were black and brittle all around (but the inside bark was yet alive), that after peeling grew gnely. I have trees in bearing (the last season) that I peeled in the winter. I think with mature. care we can successfully raise pear trees in this climate, although they require close watching. The serious question, however, is: What causes the blight? I think it is caused by an insect stinging the bark. My reason for this belief up the meat pour out of the pan all is the appearance of the red streaks, but about two tablespoonfuls of the that precede the dark coloring of the drippings, saving the excess for future bark. They seem to start from a given use; set the pan over the fire, stir in a point and extend each way up and heaping tablespoonful of dry flour. down. May I not be right? What say mixing it evenly with the brown drip-the nurserymen?

The writer has described the symptoms of blight, and given a remedy that has been tried successfully on the first appearance of blight, and at certain stages, but much depends on the soil and the growth of the tree. That it is a bark disease is true, but it is a matter of dispute regarding its mode of butter with the flour, and then make of attack and its progress along the the gravy after the above method. bark. Trees have been cut back, below the point of attack, yet the disease ap-peared lower down. The cause is attributed to the forcing of young trees in growth, but the disease is contagious, attacking every tree in the orchard. The method given by the writer of preventing the spread of the disease by peeling the outer bark is simple, and worthy a trial by others. If the inner bark is peeled, however the tree will be killed.

THOROUGH MANAGEMENT OF to the contents of the pan. The very ANGEL COCOANUT CARE. - Two best treatment of disease is prevention cups of sugar, half a cup of butter. in all cases. But that is especially true three cups of flour, one teaspoonful of with sheep, and at the very first sympan Earliom, was taken seriously ill with typhold fever, at Victoria, B. C., baking powder, whites of three eggs, ton of disease, the flockmaster in consequence of his vigilance should recognize and half a cup of milk; flavor with vanhis physician consulted Sir Andrew Clark in London, at a distance of 6,000 the approach of danger, immediately illa; bake in jelly cake pans, spread the separate the sick sheep from the well top of each with thick using, then the bottom; let dry and sprinkle thickly miles, by telegram and cablegram. The two physicians thus talked over bottom; let dry and sprinkle thickly with cocoanut. Ice all over and sprinthe case for three hours. This beats

CHOCOLATE CREAM. - Three fourths of a pound of best enocolate, two quarts of milk, four eggs, flavoring. Boll the periment stations in order to prevent milk and sweeten it to taste. Scrape and dissolve the chocolate in a little warm water, then dissolve the milk gradually and mix the whole until very smooth. Now boil it again, stirring constantly until the chocolate is cooked. Beat up the yolks of the eggs and add the chocolate to them, being careful to allow the chocolate time to cool before adding it. Put the whole on the fire in a clean yessel and let it boil till it

acquires the consistency of a rich custard. Then pour it into a deep dish. Beat up the whites of the eggs until very light, sweeten them with sifted sugar and flavor with vanilla or almond or any other flavoring to suit the taste. Cook them lightly over boiling water, and ornament the top of the cream

PICKLED CABBAGE .- This, either red or white, is cut into thin slices, and sprinkled with common salt steeped in strong brine, and allowed to lie for one or two days. It is then drained for ten or twelve hours and put into jars. Prepare the spiced vinegar as follows: four pints of strong vinegar, two and a half ounces of salt, one half ounce of bruised black pepper, two and a half ounces of bruised ginger, one quarter ounce of shred mace. Strain, and when cold, add it to strong distilled vinegar. Pour this over the cabbage. Another plan is to steep the sliced cabbage in alum water for ten or twelve hours, and, after draining and drying it, to pour the vinegar on it as before, This process causes the cabbage to eat very fresh and crisp, but it takes longer to

BROWN GRAVY FOR BAKED MEAT. When a thick, brown gravy is desired for baked meat or poultry, after taking ly stir in a pint of boiling water, and a

palatable seasoning of salt and repper, continue stirring until the gravy is free from lumps and has boiled for two or three minutes, when it will be ready to use. When there are no brown drippings, melt and brown a tablespoonful

MASHED POTATOES WITH BACON. -Cut into a saucepan, in small pieces, one quarter pound of bacon and an onion and place over the fire. Tie together several branches of parsley, one tus was held in New York a few days of thyme, two bay leaves, placing within a couple of cloves, and when the sent over in twenty-five seconds and onion commences to color place there printed on a tape in plain Roman characin the saucepan and pour in one pint of ters. A New oil light was shown in public near London recently. It is stated that the principal feature of this new light is the mode of evaporizing the oil and preventing its escape in the form of spray, or, in short, the method of obtaining complete combustion. Creosote oil is ordinarily used, and after a small quantity of spirit las been poured on the surface of the oil contained in the well of the lamp, a light is applied, and the radiating covers put on. Compressed air is then turned on, which, passing by means of a small jet through the centre of the flame and over the surface of the oil in the well, forms a high temperature and also produces an induced current, which raises the gas of the heated oil, and at the same time draws in the necessary supdly of air to complete perfect combustion and produce a powerful light. The well of the lamp is connected with a tank or reservoir, insuring a constant supply of oil. The flame forced up from the lamp emits no smoke, and the light, though naked, does not dazzle the eyes. The light is chiefly intended for industrial work on a large scale, such as in connection with railways, docks and buildings, when the illumination of large spaces in the open air or under cover is required. Either common creosote oil, crude petroleum, or any other heavy hydro-carbons may

# Cold Waves

Are predicted with reliable accuracy, and people liable to the pains and aches of rheumatism dread every change to damp or stormy weather. Although we do not claim Hood's Sarsaparilla to be a positive specific for rheumatism, the remarkable cures it has effected show that it may be taken for rheumatism with reasonable certainty of benefit. Its action in neutralizing the actidity of the blood, which is the cause of rheuma'ism, constitutes the secret of the success of Hood's Sarsaparilla in curing this complaint.

There has lately been invented a new system of synchronism which, it is claimed, will make it cheaper to telegraph messages than to mail them. Dr. J. Harris Rogers, of Washington, D. C., is the inventor, and he claims that the world will be almost revolutionized by his discovery. The new system, Mr. Rogers says, reduces the English alphabet to ten elementary characters. The messages are prepared by means of a machine resembling a typewriter and With the use of ten keys, one for each printed on a tape in plain Roman characters eight potatoes, season with a pinch | work that ten do now by the system in

THE other night a lady of the listener's acquaintance happened to be visit-ing in a household where it is safe to say that "Robert Elsmere" has not been read because the family are of been read, because the family are of success. An old friend called at the the extremest sect of orthodoxy. There | would-be artist's studio, not long since, was a little girl, and after dinner this and said candidly: little girl, having found her way to the visitor's lap, where she sat, big eyed and wistful, the visitor asked: "I'm not discouraged,"

"Would you like to have me tell you ply; "in a few years more I may eclipse a story?" Raphael."

"Oh, no," said the child, with a lit-tle shudder, "cause God would 'trike you dead if you told a 'toryl" years old at least, and nobody has This anecdote is absolutely true, and yet we send missionaries to Japan and you know that at your age Raphael had

# What Scott's Emulsion Has Done!

Over 25 Pounds Gain in Ten Weeks Experience of a Prominent Citizen

THE CALIFORNIA SOCIETY FOR THE SUPPLEMENT OF VICE. EAN FRANCISCO, July 7th, 1836.

I took a severe cold upon my chest and lungs and did not give it proper attention; it developed into bronchitis, and in the fall of the same year I was threatened with consumption. Physicians ordered me to a more congenial climate, and I came to San Francisco. Soon after my arrival I commenced taking Scott's Emulsion of Cod Liver Oil with Hypophosphites regularly three times a day. In ten weeks my avoirdupois went from 155 to 180 pounds and over; the cough meantime ceased. C. R. BERNETT

If at any time odor comes up from the yard spade up the ground or disinfect it. This may be done by adding a gill of carbolic acid (crude) to four gallons of water, and sprinkling the yard with an ordinary watering pot. The poultry-house should never give off odor if properly attended to.

THE buyers of fruit and ornamental trees can hardly be too careful in getting stock grown on land free from quack. The fine underground roots of this pest are often mixed among those of fruit trees, and once planted are dif-ficult to get rid of. Whenever quack grass appears for the first time on a farm it is usually in the orchard, and has been introduced by the purchase of trees without careful examination to see that quack is not mixed with their roots.

THE principal advantage in keeping tinue everything that does not pay.

kle with cocoanut.

CABINET L'UDDING.-Butter a bowl, line it with two unces of raisins, half garget, or too seldom relieving the fill it with slices of bread and butter; udder, are frequent causes of spolling a beat three eggs, add one pint of milk, one quarter pound of sugar and some fine art when properly conducted, and nutmeg, pour over the bread and steam the most important work in the whole for an hour, serve with jam sauce made spoonful of jam; boil five minutes, then strain it.
