THE SMEERCASE BUTTER.

An agent, is now said to be in our county with a new process for making butter-a double quantity from a gallon of cream over the old way of churningdo not bite. He puts some kind of powder into the cream which unites what is commonly called the smeercase with the real butter and produces a lump double as large as the other churning of a gallon of cream going on along side of him at the same time as a test. The big lump is a mixture, by chemical action of good butter, making a lump not fit for the market or t.ble. The other lump is smaller of course, but you have the honest, golden butter our mothers have been churning from time immemorial.
