wo Miles of Melons .- "Georgia has the biggest watermelon patch in the world" said Mr. J. J. Griffin, who has "Think of a lane two far as the eye can reach, It is an in- force being exerted upon the arms. like it. The larger melons will average forty pounds, and there will be lots of hand g asped by the mother or other sixty-pounders. There will be carloads persons caring (?) for the child, it is of 1,200 melons, with hardly a melon hurried along faster than its little legs under thirty-five or forty pounds. The company who own this immense melon being lifted and causing a constant round twice a week. patch of 800 acres will make a big thing strain upon the arm; when a crossing out of it. In my judgment their profit is reached the mother takes a stronger will not be less than \$150 a car-load, pull, the child dang es by one arm unand they will ship 4 to loads. Sixty til the opposite side is reached and thousand dollars on 800 acres will beat then the feet are allowed to partly rest cotton. Without disaster, they will upon the ground again. Sometimes make such a success that the farmers the process will be varied by two perwho are watching them will plant an sons taking the child between them immense acreage in that section next and each taking a hand when the weight

NO FERTILIZER is more highly valued than lime, for the reason that it is lowed. The arms of a child were never cheap, easily applied, and its effects are lasting. Lime exists in all soils, but mor- in some, than nothers. As a carbonate it is insoluble, but it subject to chemical changes by the action of nitric acid and other substances brought down by rains. When lime is freshly made (by burning limestone or oyster shells) it is in a very caustic state, and easily combines with water, the water crystallizing and forming a hydrate of lime. It is in this condition—the hydrate when it should be applied to soils, as its affinity for carbonic acid causes many reactions to occur in the soil, the result being the formation of substances that can be rendered soluble in water.

A WHEELBARREL FOR THE FARM-The ordinary railroad wheelbarrow much used by farmers because it is cheap, is too small for most farm work, brine, which should entirely cover it. Frairie Farmer suggests that it often pays a man to make some of his own tools and includes among these the large wheelbarrow. This barrow can be made at a cost of about \$1.50; the lumber and nails can be purchased for about 75 cents, and if a second hand wheel cannot be found a new iron wheel can be bought for about 75 cents. The sides, including handle, are about 5 feet 3 inches long; top of box 3 feet 3 inches; width, 2 feet 3 inches; depth, 10 inches. The wheel box should be about 2 inches

HALF INCUBATED EGGS,-The increasing popularity of incubators is having a demoralizing effect on the egg trade. Eggs are so cheap for twothirds of the year that up till recently few people took the trouble to keep any long enough to get stale. But now those who have incubators put all their eggs into them and buy dozens to make day all the eggs are tested, and those that are not likely to yield chickens are easily detected. They are taken out sojourn in a temperature of 100 deg., but they have contracted a flavor which is the reverse of pleasant. The only way to obviate this smart scheme is to one pound of the finest granulated refuse to buy from any one who runs sugar, a teaspoonful each of cinnamon, an incubatoer, but the trouble is to a scertain who has an artificial sitting twelve eggs, one pound of flour, one hen and who has not.

vigorously and successfully in Cyprus half pound of citron cut in small bits. by gathering the eggs and catching the Cream and butter; add the sugar, developed insects in systems of screens, spices, and brandy; stir in the eggs by The number of eggs collected increased screens were employed in 1882, and four hours. 185,000,000,000 insects were destroyed. The system was steadily made more

"WORKING" BUTTER .- The Dairy World says: The term "work" in the only in the sense of pressing the butter lasses, one teaspoonfui of saleratus. into a solid mass. Butter is no longer 'worked" by intelligent butter makers to get the butter milk out of it, for it is washed out while the butter is in a granular condition; and it is no longer to form a dough. Roll out into thin, it, for the salt is readily stirred in while | shallow tins, bake. the butter is in the granular condi-

foods for all classes of stock, and it is two cakes, three deep. rich in phosphates. It is a very imperfect food, however, when fed in place of grain entirely, but when given in connection with hay and ground grain it largely adds to the value of the whole. and assists to make the ration more complete in the elements of growth and production.

WEEDS make valuable food for hogs. It is much better to feed the young and tender weed to stock than to allow them to waste. On some fields the to a pulp. Cut thin slices of bread inweeds are often thick enough to mow. The pigweed and ragweed make excel-lent hog food. Purslaine and crabgrass are highly relished by cattle and

IF scrub stock does not pay try something better. The success of stock-raising depends on the breed. A steer of a beef-producing breed will weigh 1000 pounds, while a scrub steer of the same age will not reach one-half that weight. The large difference shows where the loss occurs from the use of the scrub.

HOUSEHOLD

clasp the body about the waist, or

who feels for them. Usually, with a not disagree with invalids. can carry it, a portion of its weight of the child will be divided between two arms which is only one-half as bad. But such practices should never be alintended to serve as handles for the purpose of lifting or carrying. Strains, dislocations and fractures causing deformity and imperfect use of arm or shoulder or both, result from such careless use of the arms of a child, which were designed for the child's use in doing things within its strength. It for the care given them. would be impossible for a child weighing thirty pounds to so exert its strength as to lift that amount with one or even both hands and yet that is what it is compelled to do when the arms are made the handles whereby the child is lifted.

PICKLED MELON .- In pickling a young musk or nutmeg melen, cut a hole in the side through which to extract the seeds, saving the piece that is cut out. Then lay the melon in strong There let it remain for three days; take it out, rinse it and let it he in clear, cold water over night. Then, after draining, fill it with chopped cabbage, seasoned with mustard seed, borseradish, a little ginger, some sugar, celery seed and if possible some small cucumbers. Sew in the piece that was cut out put the melon in a stone jar and pour hot vinegar over it. About three months will be taken for the pickling, the time depending on the size of the melon, but when it is done a delicious relish will be the result.

PAN CAKES (ADIRONDACKS).-Stir one pint of sifted flour into a quart of sour milk, with a teaspoonful of sait, leave it stand (in a deep jar) in a warm place over night. In the morning add one teaspoonful bi-carbonate of soda dissolved in a tablespoon of warm water, two well beaten eggs and a up the 200 or 300 necessary to fill their spoonful of sugar. Bake on a wellmachines. At the end of the fourth greased griddle. The cakes should be as and sold as "fresh" eggs. They are mixture appears over night. The eggs not altogether spoilt by their four days' and soda will thin it sufficiently in the

SCIENTIFIC.

In a recent number of the Comptes Rendus there is a description by M. Martin de Brettes of an apparatus which prints messages transmitted by light. The rays from an electric are, made parallel by a Mangin projector, would be sent from one station and would be received at the other end on a converging lens, in the focus of which is a selenium cell. This cell is in circuit with a local battery, and the receiving instrument so adjusted that the change of resistance produced in the selenium cell by the action of light would alter the amount of current passing, and so act on the electro-magnet of the receiver.

A glass throne, made to the order of an Indian Prince by a firm in Birmingham, is on exhibition in Oxford street, London. Pillars from the back and arm support a dome shaped canopy, above which is a large star. Every portion of the surface has been cut, and the pine-shaped finials which surmount the arms have no fewer than 324 facets. The ornamentation of the dome is very obdurate, and, as during the time it was on public view it was lighted by two incandescent lamps placed beneath it, it sparkled like a large diamond. It is said that this is the most important example of cut glass ever attempted.

M. de Lesseps has given an account The hot-house violets should now be of the curves registered by earthquakes pro ected against the sudden changes on the mareograph established at Colon. of temperature. As we are informed, the Paris journal for ladies fashions, "La Conturiere" has been awarded with a premium at Dr. J. B. Mayer, 831 Arch St., Phil'a, the World Exhibition at Paris, and Pa. Ease at once, no operation or detherefore we think, it would be of great interest both for our lady dressmakers and for every lady in general, if we call their attention to the new American edition of this fashion journal, much the more as it is printed in English language. We can not enough point to the rich material this paper offers, because the annual issue consists of about 300 of the latest designs, also 200 colored figures, and each number is accompanied by a cut pattern. Pleasant rainy-day work for the older children is to be found in the making of children is to be found in the making of too, the cut patterns in various sizes, either of cloaks, jackets, can book of the portraits of noted greatest value, is, that the publisher paper "La Couturiere" brings only its own Paris designs in original on the market, also that it is enabled, to in-

> its colored pictures. We can recommend this paper to every dressmaker and housekeeper, from the fact, that the price of this splendid issue is only \$2.75 per annum and \$1.50 semi-annually, and it can be had through the New York Office, Max Keffel, 834 Broadway. Especially we can hint to the November edition consisting of a great season picture with winter cloaks, an other season picture for costumes, a Panorama of children garments, a Promenade costume, the last three supplements being in colored hues, and a cut pattern.

dicate the latest fashion colors through

Fruit put in tin cans should be taken ent entirely when the can is opened for use. If allowed to remain after the can is opened the action of acid juices upon he solder when exposed to the air may form acetate of lead, which is poison-ous. Pour the fruit out into glass or earthenware dishes, and the danger of polsoning is avoided.

As the price of wooden railway ties increases busy minds are at work to devise a substitute. Of those suggested steel appears to claim the advantage in point of price, it being maintained that the cost of keeping the road bed in repair would be greatly reduced.

## Catarrh

Is a complaint which affects nearly everybody, more or less. It originates in a cold, or succession of colds, combined with impure blood. Disagreeable flow from the nose, tickling in the hroat, offensive breath, pain over and between the eyes, ringing and bursting noises in the ears, are the more common symptoms. Catarrh is cured by Hood's Sarsaparilla, which strikes directly at its cause by removing all impurities from the blood, building up the diseased tissues and giving healthy tone to the whole system.
