THE FIGURE.

A well proportioned figure is a thing to be appreciated by all, and although a full bust and rounded waist are, unfortunately, not to be acquired by everyone desirous of obtaining the adjuncts to a beautiful figure, still much can be done, by care and attention, to improve even the very worst specimen, and a straight back, raised chest, and well-carried head must make a form worthy of admiration; and these are things very easy to achieve. The best way is to go through a short calisthenic drill regularly every morning immediately after the bath—should such be an accompaniment to the toilet-finishing up with dumb-bell practice, the weight of these being in accordance with the strength of the user, and just sufficiently heavy to strengthen and develop the muscles, and not to overtax the arm strength.

It seems very strange to me that, considering the amount of money which is expend d upon the education of our girls, so small a share of it, and so little thought or trouble are comparatively bestowed upon the form and general carriage in their youthful days, with most regretful results as they grow older. Despite the many appliances which modern genius can contrive as calculated to aid and improve the figure the growing girl, I am sufficiently oldfashioned myself to cling to what is still a memory of my childhood-the backboard-which was to the fore in the days of our grandmothers, with the result that they were enabled to sit erect, without "doubling up" or "lolling," as do the young girls of the present day, and even in their old age it is distinctly observable that the ladies who used the backboard in their youth hold themselves better than the multitude of the younger generation. For the benefit of those of my readers to whom the name backboard is unknown, it being, indeed, an almost obsolete article, as to completely cover the back almost, from above the shoulders to the waist, cut out hollow so as to fit under the arms, and tapered at either end to admit the arm being, as it were, entwined round it.

This should be brought into use at least once a day, or twice, providing very stooping shoulders and rounded back require to be straightened, for about half-an-hour at a time, and although it may be inconvenient, even using the phonograph to record the painful at the commencement, as the gure straightens and assumes its normal condition and shape, it be-

omes less difficult each time. Most growing girls suffer from considerable weakness of the spine, which induces a tendency to stooping when walking, or to huddling up in an ineleinstrument. It was then removed to gast and ungraceful heap when sitting, learned to make anything better. It is the cell of the male and made to repeat and one of the best methods to cure the sounds thus registered. The flogging was intended to drive out the devil. Daji died almost immediately without a complaint. The widow nar rated all the lacte to the coroner and described both floggings as being very violent. The medical evidence showed that there were several bruises on the back, and an abrasion of the right hip, but that the cause of death was bem orchage from rupture of the spleen, which was probably not due to the flogging. The jury found a verdict accordingly, adding that there was no evidence to show how the spleen became ruptured.
