LOVE'S MILLIONAIRE.

I say: "The world is lonely; The hearth at home is cold. And sad is life to child and wife When life hath little gold!" But soft her arms steal round my n ck-My comforter so dear; And "How much do you love me?" And her sweet voice answers clear:

"I love you-I love you A hundred million-there!" And then I'm poor no more-no more, For I'm love's millionaire!

Then sweeter seems the breaking Of Poverty's sad bread: And roses bloom from out the gloom And crown her curly head. And if sometimes a thankful tear My dreaming eyes will fill, Her soft arms steal around me And she whispers sweetly still:

"I love you-I love you A hundred millions-there!" I weep no more; God help the poor! I'm Love's own millionaire! -Frank L. Stanton.

AN UNEXPECTED VALENTINE.

By Bessie Tobin.

When my dear Aunt Maud died-she died the very summer I graduated-I was really too heart-broken to care what became of me. Still, I had to be disposed of in some way, so it was deeided that I go to live with my brother Richard.

I had always lived with my aunt, had known no other mother; therefore her death was the greatest blow possible to me. And this brother Richard I knew only slightly, and that when I was a mere child. If I had been in a state of mind to care about anything I should have hated the idea of going very much. As it was, I went without a murmur. I took the journey alone, almost across the continent, and subsequently, after many ups and downs. arrived at Dick's town, a queer little village in Sonth Carolina.

Dick is a moderately young bachelor. He is an attorney-at-law, and has a very fair practice indeed. Anterior to my advent, he had lived by himself in a pretty cottage on the prettiest street, and was rather a central figure, and was quite the most eligible young man about town. He was not spoiled, though. I found him to be a very dear old fellow, and determined in my heart to be to him such a faithful co-operator and satisfactory housekeeper that he would never need or desire any other.

We got on famously together, so famously that in all probability the last chapter would have found us still there. he a grizzly old bachelor, I a grizzled old maid, had not something occurred which brought about a change.

became enthralled by terror. I had a had pronounced me more frightened money. It was locked up in the cabinet at my right hand, not two yards away. I found myself listening painfully, tartuously. My throat seemed swollen. I swallowed in gulps. I endeavored to rally my courage, to

persuade myself that I had awakened from a nightmare, and was nervous; that there was nothing to fear, and that I was making a baby of myself. All to no purpose. Something was going to happen; something was happening at that moment which would bring me hurt.

I could not throw off the notion. Just then it began to rain- a regular downfall, as if the bottom had suddenly fallen out of the clouds. I have never known it to rain so heavily. A perfect

approach of the other.

note-an open note. It was he who water. caused the delay which prevented my "Electricity, as is being gradually

up the sash I would be detected and of the Almighty's creation." overpowered. I heard a heavy tread along the hall. An idea flashed into my

kind of instinctive animal fear of im- than hurt; and, really, but for the pending danger. I thought of the dreadful cold I caught and my wounded forehead, it did not amount to anything, and soon became a tremendous joke

And it turned out that this friend of Dick's, whose acquaintance I made in such an unconventional fashion, was the very client whose money I defended. And it also came about that-that he

-that I- that we have-we have grown to know each other very well; and Dick-Dick is to look out for another co-operator before next fall; because-well, for reasons best known to myself.

Electricity in the Earth.

"Take a spade, turn up a small quandeluge, and every drop seemed to pen- tity of soil, hold a portion in your hand, etrate my soul. I did not move. I lay hold it up to your ear, then smell it. back in my cushioned chair helpless, You will observe first a slight motion, and felt that I could not have raised hear a faint sound as of the moving of my hand to my face if my life were the distant timber, and readily notice the forfeit. Such pouring! I found my- odor of heat. Do you know that the self listening behind the rain-listening forces held in your hand are from elecfor another sound. It all grew out of what happened one St. Valentine's eve.

On this day, memorable above other days, just about an hour after dinner Dick received a telegram to go up that evening to A-, a city fifty miles away, to meet an important client. He did not have time to come home, for the train was then in sight, but he scribbled me the following note, which I did not get until nearly midnight, because the office-boy neglected to bring it until that time.

3:10 p. m.

Dear Girl-Have to leave on next train to meet a man in A-----. Probably won't get home till tomorrow noon. Spend the night with the Ancient (a dear old lady friend of mine). Be sure to put that money in the bank before it closes at 4. Don't fail. DICK.

ished as the moments dragged by. I Dick came at noon, and was horrified

A Light in His Pocket. A number of electric lamps of various sizes and shapes have been patented and are constructed by an electrical engineer in Vienna, These lamps come in the shape of bottles, clocks, opera glasses, in fact, any desired shape, but are all constructed after the same principle.

The neck of this bottle contains a small battery, in which three pairs of platinum and zinc elements of the smallest possible size are concealed. This battery has a six-volt tension and furnishes a current of from four to five imphere intensity. A minute incandescent lamp is connected with the poles of the batter, and protected by a knob of cut glass, the lower part of which is silvered and acts as a reflector. The body of the bottle contains the reservoir, in which a fluid, which s furnished by the inventor of the app. ratus, is kept. When the light is to be used the top containing the battery ts screwed off, and the bottle is filled.

During 1894, 3,315 patents relating o electricity were granted in Great Britain, the United States and Gernany. Of these 1,130 were British, beng one-twentieth of all British patents. .704 were American, and 481 were lermap
