LIZARDS IN SAMOA.

The Way They Shed Their Tails and

Fool the Kittens. A writer of Samoa writes in an interesting way of the lizards, little fellows about two inches long, prettily colored in a light and dark shade of brown. They can run up a window pane quite as easily as can the flies on which they

"When alarmed, the lizards are off like a flash of light and will take the most reckless leaps. I have seen them land safe at the end of a twenty foot jump. Yet when cornered they have no hesitation in snapping off the most of their tails.

"That was a maddening puzzle to my small cat. The sight of a mo'o anywhere was an immediate challenge to the kitten. She would immediately start on the hunt, for the most part a fruitless chase, for the little lizard could skulk off faster than two cats could pursue. Yet when the kitten did succeed in landing on the lizard there followed a scene of bewilderment. The mo'o invariably snapped off its tail, which was left wriggling in one part of the veranda, while the lizard ran off a short distance and awaited developments.

"The kitten never knew whether to catch the lizard or the tall. If the mo'o moved, the kitten went for it, but she always stopped short to keep an eye on the wriggles of the tall. As soon as she turned back to take care of the tail the mo'o got in motion and had to Levi Pennington intends moving to be looked after. Hundreds of times I ending was always the same-the lizcontent with the bony tail. But there were lots of lizards about my house sprouting new tails." - Youth's Companion.

> Instinct of Animals. An English periodical says: The instinct whereby wild creatures detect those of the human species who are likely to be hostile to them and those who may be regarded as harmless is of so subtle a quality that it almost appears to partake of the nature of metaphysics. In the nesting season plovers will actually buffet the angler who is fishing too close to their broods, but by the date of the shooting season they would not allow him to get within two fields of them. The wood pigeon seems to know exactly the range of the modern fowling piece and will flash boldly past at an interval of 100 ards and upward, but is careful quickly to put a tree between himself and a sportsman if disturbed at any range within gunshot. The fox knows that he is sacred from guns and will audaclously seize a fallen pheasant and decamp with it within twenty paces of a retriever. He is quite aware that the latter is no foxhound.

The Habit of Acquisition. "It beats me," said the philosopher, that people will keep piling up money

Passing a bookstore, he saw half a dozen very cheap books, which, however, he knew he laidn't time to read and doubted very much if he ever would have time to read. But they were cheap, and he bought them and sent them home to be added to his library, which already contained several times as many books as he would ever have

There was a wait to find the right sort of craft and another for the France for its supply of pins till the bad weather season to pass, and when the search was finally entered upon Henderson had been playing Robinson Crusoe for over two years. You will figure that it was a very try. easy thing to steer for the Coral sea and have Burch point out the island on which Henderson had taken up his abode, but we found difficulties from the very outset. Henderson had a passing a millinery establishment on chart of the Coral sea, but he had not allowed Burch to inspect it. When we had finished with the Lousiade archipelago, we steered to the northeast and picked up island after front of the hat that he sees, and he island without scoring a point. Her captain reported that he had attempted to land | the buyers, and they know that their on a small island about sixty miles to women friends when they meet them the east to replenish his water casks, but had been fired upon by some one concealed in the bushes and driven off. That was eighteen months previously. His description of the island tallied pretty well with Burch's, and we at once set out to search. One day in searching an island which Burch was almost sure was the one Henderson had been left on I ran across an old camp which had previously been occupied by several men for some days or weeks. They had built rude shelters, cut down many small trees for firewood, and there were many relics of their stay. I found some things which at once added a very serious face to Jack, and it is applied to any stranger our further search. I picked up three indiscriminately. or ten days. We now feared the worst. On all the inhabited islands of the Coral sea is a class of men called "beach combers." They are sailors, traders, wreckers, thieves and worse. If these men had discovered Henderson on his island home, they would not hesitate at murder in order to secure his possessions. The relics found in the old camp seemed to prove robbery at least. Henderson had no boat and could not leave his island. If any one had visited him, he would not have presented them with his books, as the uncut leaves proved he had not yet perused them himself. It was almost without hope that we

one the sailor had lived on for a week

On the fourth day after we struck the right island at last. The schooner was obliged to cast anchor about half a mile off the beach, and I then went ashore with the men. A heavy growth of trees and bushes came right down to high water mark. We set out to cross to the south side, and we had made our way for about half a mile when we caught sight of a goat and also heard a rooster crow. A few minutes later a dog barked, and then we knew for certain the hiding place of the missing heir. The dog presently appeared to view, but he looked wild and half starved, and with all our coaxing we

could not bring him nearer. We first moved down to the house. It contained only one room, and the floor was littered with books, bottles, seeds and various other things. Boxes had been broken open and their contents emptied, but amid all the confusion it could be seen that nothing of real valne was left. In and about the door was a score of bullet holes.

"We shall find it down here," said the captain as he pointed to the rocks, and we followed him. The dog made a great fuss as we drew near, and we Star. knew why. He was guarding the body of his master. No; it was not a dead body, but rather a skeleton.

Twenty rods to the south, in the edge of a thicket, we found two more skeletons. These men belonged to the party, making the attack. How long he had stood them off no one could say, but he had made a good fight of it before being struck down.

When we left the island, we took with us the skeleton and everything bearing on the case. We then spent six weeks cruising about in search of a clew to the murderers. We ran across a trader who had seen six beach combers in a craft in the neighborhood of the island. We found a native with one of Henderson's guns, which he had bought of a white man. We found men who had seen the other dog. We found some of the books and a medicine chest, but we failed to lay hands on the guilty parties, and to this day sale begins to-day, they have gone unpunished for that dastardly crime. M. QUAD.

Pins In England.

In England the ordinary domestic pin had become in the fifteenth century an article of sufficient importance to warrant legislative notice. An act of parliament passed in 1483 prohibited the importation of pins. As a necessity of the toilet pins were introa wanderer on the face of the earth duced into England in the latter part of the fifteenth century by Catherine Howard, queen of Henry VIII., who One day a sloop arrived with one received them from France.

Very good pins of brass were made said that he and his partner had taken at this period, but a large portion of a man of the name of Henderson to them were made of iron, which was one of the New Guinea islands, where blanched and sold for brass pins. In our own southern states I have noticed that the colored waiters in the hotels are invariably called George. I think it would be interestive to know how these customs originated."

Need For White Stockings.

The story was recently told us of a nurse who, proceeding to the tropics. on consulting the matron of the hospital, who was in England at the time, as to her outfit was advised to take out white stockings. She must, at any rate, take one pair of white stockings. Curious to know why, she asked the reason and received the terse answer, "To be buried in." We relate the story as showing the spirit in which nurses take up work in unhealthy climates, knowing full well the risks.-British Journal of Nursing.

Thumbs and Mechanics. Two men got into an argument the other day over the expansion of steam in a cylinder. "Why," said one, "you don't know anything about machinery and the principles of mechanics. Your thumbs are not shaped right." He then went on to explain that a man with long, thin thumbs did not have a mechanical turn, while those with thick thumbs, broad at the ends, were natural born machinists. "I never belleved in physiognomy," he said, "but I do believe in thumbs."
