MOOSE OF THE NORTHWEST.

WOODS OF NORTHERN MINNESOTA FILLED WITH THEM.

An Observer Says They're Wonderfully Keen and Intelligent—Feed Partly Under Water in Summer—Bulls in Mating Time, He Thinks, Kill Many Cows.

Much information concerning the nature and habits of the moose is furnished by J. A. Turnbull, who has just returned from a trip of two and a half months in the wilds of northern Minnesota on the Canadian boundary...

"Few people have any conception of the astuteness of these animals," said Mr. Turnbull. "They possess a keenness of scent and bearing that is almost beyond belief and an intelligence that is seldom credited to them by any one except those who have devoted considerable time to studying them and their ways."

"In the section of the country where we were the larger part of our stay moose were exceedingly plentiful and we had the finest opportunity to observe their actions. We followed them from one place to another, endeavoring not to frighten them, and all the while noticing them very closely."

"In the mating season, which commences around September 20 and ends about the middle of October, the bulls are exceedingly vicious, while the cows are timid and seek the deeper forests, being easily frightened. It is my opinion that the moose kill many of their mates at this time."

"The cows soon betake themselves to some inland in order that they may not be disturbed by wolves or other wild animals. The moose calves are about as homely and unsightly as anything I have ever seen. Their bodies are nearly as long as their heads and when they are 3 or 4 weeks old they weigh about 100 lbs."

"The calf and its mother remain together for about nine months, the mother, of course, providing food and shelter for the younger animal. But after that length of time has elapsed she will try to get away. In order to do this they will often travel miles up stream so as to leave no scent, and as a rule they succeed in accomplishing their purpose."

"The bulls have a peculiar grunting sound whereby they call to the cows. A man can imitate the call after long practice, but not so perfectly as to deceive them. The only way in which this ruse can be successfully carried out is to make your call at the same time that the moose make their noise. In this manner I have called them under the branches of the tree in which I have been sitting from distances as great as a mile or more."

"The males also have an odd habit of striking their antlers against trees, making a sound that rings clear as a bell, after which they bellow long and loud. On a quiet night they can be heard miles away. I believe this is their mode of expressing defiance and challenging a rival to contest."

"It is astonishing to see them go through the woods while bearing their immense antlers. They calculate the distance between two trees to a nicety and hardly ever strike a branch. But perhaps the strangest part of this performance is that this does not seem to retard their speed in the slightest."

"In the summer they seek the water, where they will not be pestered by flies, and stay there during most of the warm weather. As they are not built to reach the grass with their jaws, being very high in the fore-quarters, they feed on lily pads, roots, watercress and moose maple during the summer. The watercress grows chiefly in deep water, and to reach it I have seen moose dive in water from ten to fifteen feet in depth, leaving only their heads visible. They stay under for a minute to a minute and a half and usually do their diving at night. When they have filled their large jaws they proceed to sort out such parts as they want and eat them leisurely."

"When autumn approaches they take to the rocks and high places, where they live on yellow birch and white willow tops. I have seen them stand on their hind legs, reach the top of a birch tree fifteen feet above the ground, snap it off and then pull off the young shoots. In the winter they sustain themselves on lichens, ground hemlock and white cedar."

"When the snow becomes deep and the temperature is far below zero they herd together in some dense cedar swamp and trample down the snow. Often as many as sixty gather at one time in this way."

"When the snow becomes deep and the temperature is far below zero they herd together in some dense cedar swamp and trample down the snow. Often as many as sixty gather at one time in this way."

Such experiences as these are usually due to panic. They seldom happen to the man who is able to act with calmness and judgment.

Summer visitors to the woods are peculiarly likely to be lost but so may also people who are accustomed to living in the woods. No man in a wild country is altogether certain when he goes to the woods that he will find his way back without difficulty...

Every man who goes into the woods should make up his mind that in case he is lost he will observe a few simple, common sense rules of conduct. In the first place, he should resolutely refuse to be frightened. The immediate effect of the discovery that one is lost is usually complete demoralization. The victim falls into a panic of fear and wants to extricate himself immediately. He runs about in different directions, hallooing, until what little sense he had left is completely gone. Avoid that. If you should miss your trail or be in doubt as to your whereabouts, the best course is first to sit down where you are and think over matters. It is not a serious affair, be assured of that. There are few regions in this country where a man is not within a day's walk of some settlement, and if the season be summer, you have nothing to fear. Consider the matter carefully, use your memory and your reason. Make up your mind about the proper direction to follow, then take your course, and refuse to change it without good and sufficient cause. Don't hurry; take your time and when you feel exhausted stop and rest. Do not try to travel at night. A night spent out of doors in the summer doesn't hurt anybody.

If you have so lost the sense of direction that you cannot make up your mind what course to take it is usually best to follow a stream. In a rough country there is almost always flowing water. Streams always lead to settlements. The way may be long and the "going" tortuous, but stick to your stream and it will bring you out.

Keep your eye on the sun, if it is out, and get your directions from it. Study the contours of the hills and mountains, the appearance of the trees and of the stream. Try to find something familiar. Don't look for moss on the trees to determine your direction. It is not a safe guide.

Don't throw away food or clothing in order to travel faster. You will probably need both.

Keep your confidence. When everything else is gone, hold on to that. Getting lost in the woods is after all under certain restrictions, a rare kind of sport. There is certainly excitement enough about it to stir the most jaded, with plenty of opportunity for the exercise of coolness and common sense. A country like the Adirondacks furnishes ideal conditions for getting lost—and getting back again. Settlement is nowhere so far away that you are not within a few hours' walk of a hotel or a summer cottage, and think of the romantic possibilities of such an experience.—Boston Transcript.

Work of a Beaver Colony. If the beavers continue their work on a dam across the North Fork just above the bridge across the river east of Hotchkiss, they will ultimately cause several thousand dollars worth of damages to property in that vicinity when high water comes in the spring. At present the little fellows have nearly twenty feet of their work completed and the water is rushing against it without appreciable damage.

Mr. Thomas Blackwell, who has a lease on the Metcalf property, wrote to the State game warden, asking what can be done about the matter, the law not allowing beavers to be killed. The warden replied the beavers belonged to the State, but a permit could be granted for \$1 to kill ten or twelve beavers, providing they were doing damage, but that the pelts must be carefully prepared and shipped to the warden for sale, whereupon one-half of the proceeds will be returned for "trouble" in catching them.

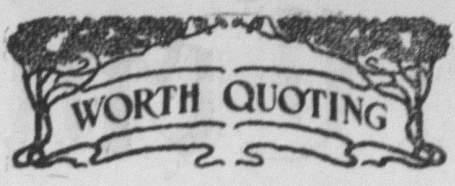

A dam, such as beavers build, will back the water up onto the Metcalf property and wash away a large part of the place. Besides that the beavers are cutting down a large number of trees now on the place, and, situated so near town, the growth is of some value.—North Fork Times.

Hobby of Norway's New Queen. Queen Maud of Norway has her hobbies, like most other European royalties.

Among the many things she has collected at various times are miscellaneous ornaments and useful articles made of ivory, of which she is a great admirer.

She has also for years collected ivory tusks, the spoils of royal sporting expeditions all over the world and these will doubtless be added to when her brother, the Prince of Wales, returns from his Indian tour.—M. A. P.

In a court of Saragossa, Spain, recently, three peasants who had murdered a family of five, were sentenced to ten years in prison and loss of civil rights, and each was sentenced to death five times, once for every person murdered.

There is usually law enough to punish any criminal if only it be enforced, says the New Orleans Picayune.

Nations, like individuals, are powerful in the degree that they command the sympathies of their neighbors.

The New York Press says it now looks as if the Japanese did not lose a cent by waiving the question of financial identity in the peace settlement with Russia.

American bridesmaids are reported to be very popular in England. Not half as popular as American brides, however.

In the last five and one-half years, Secretary Taft has travelled 190,000 miles, or four times around the globe, states the New York Evening Post.

A California physician declares that brain action in the creation of thought is electrical in its nature. That would account for a great many shocking ideas, comments the Baltimore American.

A dancing school is to be added to the University of Chicago. At last, says the Chicago Record Herald, the dancing teacher will be entitled to call himself "professor."

A Connecticut man fainted when he discovered that he had been given \$40 too much by an express clerk and walked twenty miles to return the money. He is too good for this world.

New York's Four Hundred have been reduced to 81. But there is a large number of honorary members, remarks the Nashville American.

The army medical department announces that it has banished yellow fever and malaria from the isthmus. If so, observes the Philadelphia Inquirer, the Panama canal has accomplished no small good already.

London reports that many fake "antiquities" are being sold to American millionaires. Being new in the millionaire business, will be just as happy with the fakes as they would have been with the originals.

A doctor advises people to "give their stomachs a nice vacation." It is thought, however, that only the man who hasn't the price of a meal will take this advice.

Ikons are playing a small part in the disturbances in Russia. After the first reverses in Manchuria, the Baltimore Herald remarks, the czar had several carloads of ikons shipped to the east with the hope that the backs of his men would be stiffened up, but the Japs thrashed the Russians worse afterwards, and the ikon as an inspirer of courage failed miserably. The rioters are killing people all over Russia, religious and irreligious; burning churches with other property, and not even ikons are always referred to as a religious people, but they appear to be bloodthirsty as well. If the ikon has any power for good, there never was a better opportunity than now in Russia to put it to the test.

According to the statisticians, thinks the Philadelphia Record, there is unparalleled prosperity in the country, accompanied by a higher level in the cost of living than has at any time before been reached in the past twenty-two years. Everything except breadstuffs among foodstuffs has advanced in price. Clothing and structural material are considerably dearer. This exaltation in the prices of the things which men must have to live, is especially hard upon that portion of the community unable to exact a proportionate share in the general good fortune of the mass. In so far as the cost of living is unnecessarily advanced, especially in the cost of iron, lumber, fuel, and other necessities that are made dearer by reason of taxation that brings no revenue to the Government, our prosperity is onesided, unfair and of evil foreboding.

Cynicisms. Every member of a quartet can tell you three good reasons why the organization is not perfect.

Some folks contribute generously on missionary Sunday, and treat their poor neighbors in the back street like dirt.

When you see a man foaming at the mouth, his head in a noose and a razor at his throat, don't be alarmed, for perhaps he is only getting shaved.

If some people were anything like as big as they think they are, the world would have to be enlarged.

A Severe Test. Don't ask a girl to marry you after dark when she is dressed fit to kill. Call on her, and when you leave inadvertently drop a glove on the piano. Return for it the next morning at 9 o'clock. If she comes to the door with one shoe and one slipper on, her hair done up in curl papers, dressed in an old Mother Hubbard, our advice is to take to the woods. But if she appears in a neat house dress, her hair done up and a rose in the top of her hair, grab her quickly.—Martenville (Mo.) Free
