STILT WALKING.

solute Necessity.

ularly in the low districts of France, stilt walking is a necessity. In Gascony there are great level plains covered with stunted bushes of dry heath. These waste lands have a soll that is so permeable, so soft and yielding, that the slightest fall of rain makes them practically impassable by ordinary methods of pedestrianism. But these wastes must be traversed at all seasons by the poor people of Gascony, and necessity has accordingly made the Gascons a stilt walking people, and men, women and children

may be seen at all seasons of the year stuck upon high stilts, trudging through the waste lands, carrying baskets, bundles and the like. The stilts used are about five feet long and often onger

The shepherds of Landes all go on stilts. The shepherd is provided with a stout staff that answers for many purposes. At the proper place in the staff is a flap, which makes a comfortable seat when turned down. On this the shepherd quietly sits and watches his flock, and while he sits up there he knits or spins with a dis-

taff thrust in his girdle. The Landes stilt walker can do marvelous things with these five foot leg extensions. He can run with a speed that will tax a horse, pick up a pebble or pluck a flower as the cowboy reaches to the earth from his pony, and

he can drop to the ground level and

egain the perpendicular as quickly as

a hoy can turn a handspring .- Chicago

Difficulties That Beset the Work of the Salvers.

What it means to salve a wreck is omething that few outside of practical seamen can properly appreciate The wreck is a ponderous, unwieldy mountain of steel and oak, weighing

FRIEND FARMER :

We wish to call your attention to the Weber and Columbia. Wagons we have been offering you for the last few weeks through the columns of this paper.

In referring to the good qualities of these wagons we wish to say that nothing but the best of material enters into their construction ; this combined with the best of mechanical skill, and the latest improved machinery designed especially for the construction of wagons, goes to. make up these most complete and perfect wagons ; not even the smallest details are overlooked.

The lumber used is selected-by experienced men and is of four years' seasoning.

The axles are of the very best grade of hickory.

The hubs are the very best quality of white oak.

The spokes are strictly A 1 grade of oak and hickory mixed and driven in hot glue.

The felloes are oak and are thoroughly soaked in boiled bil before tires are set, and are joined with improved steel dowels, which prevents clipping at the joints.

They are exceptionally well ironed, light running and attractively painted, and in all a wagon that will give years of service.

We very cordially invite you to step in and examine these splendid wagons whether you are contemplating a purchase now or not. We want you to thoroughly understand their construction and see where they are better than the ordinary vehicle.

The important thing in buying a wagon is to know before hand what service it will give you ; the important thing in selling them is to show you that, as well as we can, and then be sure that they are as good as we lead you to expect.
