Origin Of Our Time,

The hour is divided into 60 minutes simply because in old Babylon there existed, by the side of the decimal system of notation, another system of notation, another system, the sexagesimal, which counted by six-There is no number which has so many divisors as 60. The Babylonians divided the sun's daily journey into 24 parasangs, each parasang, or hour, being divided into 60 minutes. The parasang is about equal to a German mile, and the Babylonians compared the progress made by the sun during one hour to the progress made by a good walker during the same time.-New York American

As early as the fifteenth centur. Liberia was the first country to send cotton cloths to Northern and Western Europe. That industry is reviving for home consumption is a recent report.

Cocoanut mats have been provided for engineers and firemen of the Baden State Railways to prevent their hearing being impaired by the vibration of their engines.

Incredulity Of Man. Mr. Henry C. Weeks, the New York architect, who years ago moved the mirth of his Long Island neighbors by pouring oil into swamps to keep down mosquitoes, lived long enough to have the laugh on his side, dying Friday at the age of 66. He is not the only instance, by thousands, of the pioneer being called crazy by those whom he was seeking to benefit by an operation that justifies itself. Fulton was "crazy" the opinion of those who jeered him as he went on his way to the yard where the Clermont was building. Their incredulity was different in expression only from that of Laplace. who assured Napoleon that there was nothing in Fulton's idea, and that steam had about enough power to propel a child's plaything.-Boston Transcript.

Big Hats Defended.

"Those big hats are all right, all right," said the man. "I want my wife to wear one on week days and Sundays, night and morning. Why? They keep her from getting her head knocked off, that is why. All her life she has had the habit of poking her head through cab windows, car windows, the windows of any old thing she happened to be riding in. Pillars, posts and passing vehicles grazed her nose, but possible beheadings had no terror for her. But since she has taken to wearing big hats she has to keep her head inside because the hats won't go through the window. When voting for or against big hats just put me down among the 'yeas.' "-New York Sun.

Curiosities Of Smell.

No substance that refuses to dissolve in water has an odor. the actual substance itself, floating in particles in the air, that appeals to the nose, and not simply a vibration of the air, as in the case of light and sound. The damper a thing s the more powerful the odor it gives off. A pleasant proof of the fact can be had by walking in a garden after rain. There is no end to the curiosities of smell. It is, for instance, the vapor of a liquid that smells, and not the liquid in the mass itself. If eau de cologne be oured into the nostril the nose refuses to recognize any odor there at all,-London Globe.
