

PROTECTING COWS FROM FIRE

Lever Attached to Stanchions Will Journal. Open Them All at Once-Quite Handy at All Times.

.e. The cows were fastened in their experience and observation. Home.

which I invested a big sum, and I have for the second calf for six or eight

Lever Releasing All Stanchions.

pen. One of the things that is very useful is a lever at the end of each stanchion row that will unfasten all of the cows in that row at once. There are 20 cows on one side and 15 on the other, and the levers are near the door where one could get at them even though there were quite a blaze sistent milkers. inside.

The drawing shows how these levers are fastened to the stanchions to open them all at once. Instead of one timber at the top there are two. The Device Invented by Iowa Man Will uppermost, c, is a 2x4 that moves on top of the other. This 2x4 has slits in it in which the stanchion timbers are moved. The lever, d, at the end is open or shut as the case may be.

Besides being a good thing in case use. When I am ready to let the cows When the cows come in, they take fastened to a ring that pierces the young pitcher strike out seven of the

Constantly Recurring Question on Which Dairymen Do Not Agree-No Danger of Stunting. The age at which to breed the

heifers is a constantly recurring question. Opinion differs considerably on this point, and unfortunately experience as related by breeders is not uniform by any means, writes E. E. Kaufman in the Town and Country

The writer has always tried to make his opinions conform to his experience and observation, but in the Just the other day a dairyman near case of breeding the heifers his views here lost 17 head of good cows in a have always been backed up by both

tanchions in the barn when the barn | When the helfer is bred to drop surned. One of the men risked his the first calf at the age of two years, life to go in and open the stanchions and in nearly all instances this can of two of the cows, but the fire was be done, the habit of giving milk is so intense that the others perished, early stimulated, besides the young writes Augustus Merrill of Tulare cow is more tractable and thus more county, California, in the Farm and readily brought under the environment of her new condition. With the I have always been afraid of fire first calf dropped at the age of two ever since. I built my new barn in years it is better to delay the breeding

taken many precautions to save the months, but keep milking her for a stock in case something should hap- year at least, in order to develop the trait of long and persistent milking. After the second calf she can be bred regularly every year.

If properly fed and handled there is eally no danger of stunting the growth or undermining the constitution by early breeding. For the dairy a cow should begin giving milk as early in life as possible and the habit of persistent milking be thoroughly instilled in the animal. A heifer bred to calve at two and onehalf or three years of age will be more difficult to handle and consequently not give down her milk so readily, thus bringing about a tendency to shorten the milking period when all efforts should be in the line of a long period of lactation.

Breed the heifers young, 14 to 15 months, except, possibly, in special cases, and better results will be obtained in producing large and per-

Little Comfort for Candidate in Reason Assigned by Wife for Her Being Confident

> Mr. Williams, one of five candidates for the office of sheriff in one of the northern counties of Wisconsin, was But a Symptom, a Danger Sigmaking a house-to-house canvass of rural district, soliciting votes. Coming to the house of Farmer Tompson, he was met at the door by the good housewife, and the following dialogue ensued.

SHE COULD ANSWER FOR HIM

"Is Mr. Tompson at home?" "No; he has gone to town."

"I am very sorry, as I would have liked to talk to him."

"Is there anything I can tell him for you?"

"My name is Williams, candidate for sheriff, and I wanted to exact a promise from him to vote for me at the coming election."

"Oh, that will be all right. I know he will promise, for he has already promised four other candidates the same thing."--Norman E. Mack's National Monthly.

Daddy's Whack-Whack.

On the occasion of her last visit to a certain Baltimore household a young matron of that city found a little friend in tears. "What's the matter with little Ma-

rie?" she asked, endeavoring to console the weeping child.

"Daddy has just given me whackwhack," the youngster med between sobs

"Thoughtless daddy!" exclaimed the young woman, repressing a smile. "And where did he whack-whack little Marie?

"On the back of my tummy," was the answer.

Absorbed.

A college professor noted for his concentration of thought, returned home from a scientific meeting one night, still pondering deeply upon the subject that had been discussed. As he entered his room he head a noise that seemed to come from under the bed.

"Is there someone there?" he asked absently.

"No, professor," answered the intruder, who knew his peculiarities. "That's strange," muttered the professor. "I was almost sure I heard someone under the bed."

Unsophisticated.

"Darling," said the fond youth, producing a ring, "which is the right finger?"

"For goodness sake, Algy!" responded the maiden, "don't you know? Nineteen years old and never been engaged to a girl before!"

Backache is a symptom of organic weakness or derangement. If you have backache don't neglect it. To get permanent relief you must reach the root of the trouble. Read about Mrs. Woodall's experience.

Morton's Gap, Kentucky. - "I suffered two years with female disorders, my

health was very bad and I had a continual backache which was simply awful. I could not stand on my feet long enough to cook a meal's victuals without my back nearly killing me, and I would have such dragging sensations I could hardly bear it. I had sore

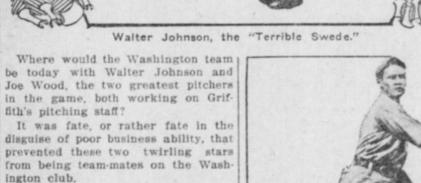

ness in each side, could not stand tight clothing, and was irregular. I was completely run down. On advice I took Lydia E. Pinkham's Vegetable Corpound and am enjoying good health. It is now more than two years and I have not had an ache or pain since. I do all my own work, washing and everything, and never have backache any more. I think your medicine is grand and I praise it to all my neighbors. If you think my testimony will help others you may pub-lish it."-Mrs. OLLIE WOODALL, Morton's Gap, Kentucky.

If you have the slightest doubt that Lydia E. Pinkham's Vegetable Compound will help you, write to Lydia E.Pinkham Medicine Co. (confidential) Lynn, Mass., for advice. Your letter will be opened. read and answered by a woman, and held in strict confidence.

their proper places, and when they are quietly eating their silage the two spikes, and depending from it is last three innings. The name of this lever is operated and they are all a flexible shield of joined rings, like young player was Joe Wood. Canfastened at one time.

DRIED GRAINS TO DAIRY COW Really More Valuable, Pound for

Pound, Than Bran-Animals Should Have Oat Straw.

It is our opinion that the dried grains are really more valuable, pound for pound, as a feed stuff. than the bran, and yet for the sake of variety, as well as for other purposes, we should hardly go to the extent of using grains exclusively, says a writer in an exchange. On the contrary, we think it would be better to mix the grains and the bran ic equal parts by weight. This mixture would carry about 16 per cent. of protein, and, when fed in connection with good corn silage, corn stover and oat straw would make a very good ration indeed. If the amount

of silage on hand will justify feeding pots and pans that some of us have to liberally we suggest the use of 40 pounds of it daily, and in connection the calf attempts to suck with this five pounds of alfalfa hay as long apparatus on she prods her mother in as it will last. Ten pounds of the mix- the side and gets pushed away for ture of grains and bran, fed in connec- her pains.
