Weber, proprietor of the Centre Hall Roller Mills, in the capacity of bookkeeper and sales agent until accepting the place named above.

"The Journal of Agriculture," published monthly by the students of the University of California, reached the editor's table and proved to be highly interesting and profitable reading. Among the contributions is one by Dr. Hunt, dean of the institution, on "Selective Immigration," and another on "Moll Furveys in California," by C. F. Shaw, professor of soil technology, in the same institution. The Journal also contains a portrait and a brief sketch of the life of Prof. Hubert E. **BOALSBURG.**

What the Editor Saw in that Town Beside the Fire.

There was a fire in Boalsburg on Thursday of last week, and with a view of giving aid Messrs. W. H. Meyer, D. A. Boezer, Leslie Jacobs, W. C. Boezer, W. A. Odenkirk, Thomas Foss, Clymer McClenahan, Cleve Brungart, and the writer went to that place in two machines driven by Mr. Meyer and Mr. Brungart. The proffered help was not needed, but that was not known when the last message was received here, before the connections were broken, was that the fire had assumed a threatening aspect.

Some towns, so history says, need an occasional fire to make it thrive, but that is not the case with Boalsburg. The town is improving without fires. The homes in all parts of the town have been very much improved within the past ten years. The roads through the town are all in fine condition, concrete walks take the place of the flag stone walks that once gave Boalsburg a reputation not to be proud of. The town generally presents a neat appearance.

A visit to Boalsburg convinces one that its inhabitants are hanging together for Boalsburg's good. Recent developments, which need not here be definitely referred to, proved this.

Boalsburg has good general stores, and general merchants; good schools, with capable teachers; good churches in fine repair; a temperance house that serves its patrons well; its streets are lighted; it has a public hall; a water plant; a Theodore Davis Boal and many other good citizens; the most extensive carriage shops in the valley; automobiles—plenty of them, Geo. E. Meyer's Metz being the latest acquisition; its citizens are intelligent; its ladies handsome, and its children good.

**You Young Fellows**

If you have exalted ideals about clothes, bring them in and match them with Montgomery Quality. You will find you did not set your ideal as high as the Montgomery reality.

Our young men's models are "jam up."

And if your father should ask you—here, too, are styles worthy of the banker and of those circles "where merchants most do congregate."

Being Montgomery quality they all bear the imperishable stamp of workmanship.

**Fruit Growers, Insure Your Crop**

The one thing that you want from your orchard is fine, sound, unspotted fruit of good color and free from worms.

**BOWKER'S PXROX**

IS THE ONE SPRAY THAT INSURES YOUR FRUIT CROP

It is a smooth creamy paste, mixes easily in cold water, and sticks like paint to the foliage and "won't wash off." It kills all leaf-eating insects, destroys fungous growths, scab, blight, rot etc. It is also the best spray for potatoes—kills bugs and prevents blight. By watering off the blight it gives the crop two or three weeks longer to grow at a time when every day's growth means a larger potato.

Star Distance. Miles are useless in measuring astronomical distances. They have to use the rate of light—184,000 miles a second—in covering the mighty spaces with which they are forced to deal. Even then we cannot half understand, let us say, the immense distance of Gamma, in the constellation Virgo. Many, many years must light travel in order to reach our little world from these two suns. They might even have been extinguished hundreds of years ago, and yet we should still "see" them, so vast are their distances. In the year 1877 a new star suddenly shone forth in the "Swan," but many did not know that the star really came into existence hundreds of years before, but its light did not reach the earth until it was seen by the observer in 1877.—New York American.
