

HOW THIS WOMAN FOUND HEALTH

Would not give Lydia E. Pinkham's Vegetable Compound for All Rest of Medicine in the World.

Utica, Ohio.—"I suffered everything from a female weakness after baby came. I had numb spells and was dizzy, had black spots before my eyes, my back ached and I was so weak I could hardly stand up. My face was yellow, even my fingernails were colorless and I had displacement. I took Lydia E. Pinkham's Vegetable Compound and now I am stout and healthy. I can do all my own work and can walk to town and back and not get tired. I would not give your Vegetable Compound for all the rest of the medicines in the world. I tried doctor's medicines and they did me no good."—Mrs. MARY EARLEWINE, R. F. D. No. 3, Utica, Ohio.

Another Case.

Nebo, Ill.—"I was bothered for ten years with female troubles and the doctors did not help me. I was so weak and nervous that I could not do my work and every month I had to spend a few days in bed. I read so many letters about Lydia E. Pinkham's Vegetable Compound curing female troubles that I got a bottle of it. It did me more good than anything else I ever took and now it has cured me. I feel better than I have for years and tell everybody what the Compound has done for me. I believe I would not be living to-day but for that."—Mrs. HETTIE GREENSTREET, Nebo, Illinois.

INSIST ON PURE SEED

Farmer May Determine Whether Grain Contains Impurities.

Great Care Should Be Exercised to Prevent Introduction of Noxious Weeds Upon Land Difficult of Eradication.

(By O. I. TILLMAN.)
By studying carefully the characteristics—size, shape and color—of grain and weed seeds, the farmer will be enabled to determine whether or not his grain contains impurities. Great care should be taken to prevent the introduction of noxious weeds upon land, as they are difficult to eradicate.

Various Grain Seeds.

and often cause permanent injury to the land upon which they grow.

a. Tuft Hair-grass. Hull single, white or straw colored, hairs and a bristle at the base. In grasses.

b. Wavy Hair-grass. Similar to a, but longer and brown. In grasses.

c. Common Oat. Hull single, mostly smooth, sometimes awned.

d. Wild Oat. Hull single, straw-colored or brown, hairy or only so at the base, a twisted awn from middle scar ringlike. In cereals.

e. Tall Oat-grass. Hull single, nearly cylindrical, awned at base, straw-colored. In coarse grasses.

f. Bermuda-grass. Hull single, flattened, smooth, straw-colored. In clovers and grasses.

g. Mollinia. Hull single, brown, dull. In European clovers and grasses.

h. Orchard grass. Hull single, straw colored, curved and pointed. In clovers and grasses.

i. Dog-tail grass. "Hull single, brown, the pointed apex yellow and rough. In European clovers and grasses.

j. Kentucky Blue-grass. Hull single, light brown, usually acute at ends, side veins distinct. In clovers and grasses.

k. Canada Blue-grass. Hull single, lighter colored than j, more blunt at ends, side veins indistinct. In clovers and grasses, especially alsike clover and Kentucky blue-grass.

l. Rat-tail Fescue-grass. Hull single, straw-colored, rough, slender awned. In clovers and grasses generally.

m. Meadow Fescue-grass. Hull single, straw-colored. Stem cylindrical expanded at apex.

n. Soft Chess. Hull single, light straw-colored, wrinkled, awned. In coarse grasses.

o. Cheat. Hull single, nearly cylindrical, straw colored, smooth, usually awned. In coarse grasses and cereals.

p. English Rye-grass. Seeds similar to m, differ particularly in the flattened, wedge-shaped stem.

q. Italian Rye-grass. Seeds differ from p, chiefly in the slender awn from the apex. In grasses.

r. Darnel. Seeds particularly similar to q, but larger and more robust. In cereals.

s. Couch-grass. Seed clusters and single seeds similar to m and p. Found in cereals and awnless bromo grass.

t. Sedges. Seeds brown, both free and covered by flattened, flask-shaped hull. Found mostly in grasses.

u. Wild Onion. Bubbled covering papery, white, straw-colored or purple. In cereals, particularly wheat.

v. Hemp. Seeds gray, smooth, veined. In millets and cereals.

w. Field Sorrel. Seeds smooth, amber colored, shining, often covered by reddish hull. In farm seeds generally.

x. Curled Dock. Seeds beechnut-shaped, reddish brown, shining. In farm seeds generally.

For Egg Production.

The secret of egg production consists of a good supply of grit, good health, plenty of exercise, pure food, green food, fresh water, cut clover hay and green cut bone, freedom from lice, regularity in feeding, cool houses in summer and warm ones in winter, and breeding only from the best laying stock.

Care With Turkeys.

Always be sure that every part of any inclosure where the turkey hen and poults are kept is well drained, sometimes the hen will sit down at night in a low place, and a heavy rain will fill the depression with water and chill or drown the poults.

Kale in the Garden.

Do not forget in planting your garden to provide for a patch of kale. There are different varieties, each of which is good.

MANY WAYS OF SOWING OATS

Question Arises as to advisability of Making Any Preparation of the Soil.

Oats has been such an uncertain crop in many of the western states, often the best crop being from a field that was sown broadcast and scratched in any old way, that a question has been raised among farmers as to the advisability of making any preparation of the soil other than getting the seed scattered and enough soil worked up to cover them.

In some sections this lack of the proper preparation is the rule rather than the exception. A great many sow the seed among corn stalks and disc or cover with the cultivator, harrowing afterward.

In some cases this plan has produced good crops, but from my observation and experience the best crops of oats are grown on land that has been well broken either in the fall or the early spring and the oats drilled in at the rate of two bushels to the acre.

When seed are put in in this way there is no trusting to a rain to finish covering them and they will begin to germinate at once. The seed are all put in the ground to the same depth, resulting in an even stand.

When the seed are sown on top and cultivated or dished in some will be covered deep and in some cases shallow or not at all. The birds will get some of them or in a few weeks of dry weather they will not sprout at once.

If a hard rain comes while covering and before the harrow has been run over the ground it can never be smoothed so that a binder can be run over it with comfort to the driver.

GIANT THUYA GAINING FAVOR

Found Easier to Grow and Transplant Than Any Other Conifer—Likes Any Soil.

(By W. R. GILBERT.)
The Giant Thuya is rapidly making its way in the good opinions of those interested in conifers. It is found easier to raise and easier to transplant than any other conifer. It will grow in almost any soil, even in damp, cold bottoms and on poor dry oolite, and seems equally indifferent to wind, damp and spring frosts. There is no reason why this tree should not be sold in nurseries at the price of spruce, unless it is the absence of a regular demand, for it can be got to the proper size for planting in two years' less time. The tree seeds itself in sandy soil.

In a visit to England a few years ago, I saw a plantation of Thuya and larch planted in poor clay over chalk, and the Thuya had completely outstepped the larch. Another instance,

A Beautiful Specimen.

In a twenty-four-year-old plantation of Thuya, Douglas fir and larch, on fairly good soil the Thuya had grown two feet per annum, and pretty well held its own with the Douglas, though on a steep hill about 500 feet in altitude it was being surpassed. Here then is a rival to the Douglas in rapid growth, and the lumber is acclaimed as superior to that of the best larch, and preferable to larch for planing and fencing, so, apparently decided on rivaling the Douglas in quality. Further the adaptability of the tree to soils and its power of resisting cold and storms are greater than those of the Douglas.

For a Succession.

Do not forget and plant the whole garden when you start. "Just a small amount of each vegetable, and repeat the planting from three to six weeks later. Also remember that you should endeavor to plant the vegetables in a different place from where they were planted last year.

If beans were on one side of the garden last year, plant them on the opposite side or near the middle this year. Rotation is just as necessary in the garden for the best results to be obtained as in the regular field.

Climbing American Beauty.

The climbing American beauty has been produced by a method of cross fertilization which has retained the charming qualities of the American beauty rose and yet, by way of contrast, it is hardy and will stand heat drought almost as well as any rose.

Nourishment for Sow.

The sow with a litter of pigs tugging at her needs the most nourishing feed—not necessarily grain, but a good, rich slop of shorts or middlings.

Hour for Milking.

Cows should be milked as much as possible morning and evening at the same hour.

MANY PERSONS COLOR BLIND

Tests Used by Railroads Show That Almost Everybody is Slightly Color Blind.

The various tests for color blindness have come into practical use in the examination of railroad engineers and the like, where the ability to distinguish colors is necessary, so that these tests are no longer peculiar to the laboratory. But it is not generally known outside the laboratory that everybody is partially color blind—that is, in certain parts of the field of vision. The most normal individual can see all the colors only when he looks directly at them. If looked at from an angle of about fifteen degrees red and green can no longer be seen, but in their places will appear shades of yellow or blue. This region of the eyes is known as the yellow-blue zone. If the color be moved still farther to the side the yellow and blue will disappear and only gray can be seen. This region is known as the zone of complete color blindness. An interesting theory in regard to these zones is that every normal eye represents three stages of evolution. The zone of complete color blindness is the lowest stage, and appears in such animals as the frog, whose vision is known as shadow vision. The blue-yellow zone is one step higher in the scale, although not clearly marked off in the animal kingdom. And the appearance of the red-green zone marks the highest stage of evolution. Cases of color blindness are, according to this theory, a lack of development beyond the early stage of individual life.—Strand Magazine.

To allay itching and irritation of the scalp, prevent dry, thin and falling hair, remove crusts, scales and dandruff, and promote the growth and beauty of the hair, the following special treatment is most effective, agreeable and economical. On retiring, comb the hair out straight all around, then begin at the side and make a parting, gently rubbing Cuticura Ointment on the parting with a bit of soft flannel held over the end of the finger. Anoint additional partings about half an inch apart until the whole scalp has been treated, the purpose being to get the Cuticura Ointment on the scalp skin rather than on the hair. It is well to place a light covering over the hair to protect the pillow from possible stain. The next morning, shampoo with Cuticura Soap and hot water. Shampoos alone may be used as often as agreeable, but once or twice a month is generally sufficient for this special treatment for women's hair.

Cuticura Soap and Ointment sold throughout the world. Sample of each free, with 32 p. Skin Book. Address post-card "Cuticura, Dept. L, Boston." Adv.

"What makes me really mad," said the woman, "is to spend minutes, maybe hours, trying to get hold of a white hair that shows up on my head like a dazzling light, yet which is tantalizingly elusive when I try to catch it, and then when I do finally separate it from the brown hair and give it a vigorous pull, to find that I have snatched out a good brown hair and left the white one still shining!"

Oh, That Was It.
"Where'd you get the black eye?"
"He was bragging that he had the finest boy in town."
"But a man should be excused for a little vanity—"
"But he was making his brag to a man who had a boy of his own."

Ready Thrift.
Kirby Stone—I hate to mention it, dear, but I must tell you that business has been awfully poor lately. If you could economize a little in dresses—wear something plainer.

Mrs. Stone—Certainly, dear. I shall order some plainer dresses tomorrow.—Puck.

HEADACHE AND BILIOUS ATTACKS
Caused by Malaria removed by the use of Elixir Babek cure for such ailments. "Myself and whole household had suffered very much for some time with Malarial Fever. 'Elixir Babek' has cured us perfectly so that we enjoy at present the best of health."—Jacob Eberly, Fairfax Court House, Va. Elixir Babek 50 cents all druggists or by Parcel Post prepaid from Kloczewski & Co., Washington, D. C.

Voice of Experience.
"I have a suit against a circus and I propose to attach the elephant."
"Take my advice and attach the boa constrictor instead. The elephant eats four times a day, while the snake only eats about four times a month."

A Heroine.
"Is she ardent in the suffragette cause?"
"She is. I know for a fact that her father asked if she wouldn't rather have a French poodle than the ballot, and she refused."

For SUMMER HEADACHES
"HICKS' CAPTIVINE is the best remedy—no matter what causes them—whether from the heat, sitting in draughts, feverish condition, etc. 10c, 25c and 50c per bottle at medicine stores. Adv."

Just as Likely to Learn.
"May I ask you how old your wife is?"
"Certainly; you may ask her, too, if you wish."

The Best Beverage under the Sun—

Drink Coca-Cola

A welcome addition to any party—any time—any place. Sparkling with life and wholesomeness.

Delicious Refreshing Thirst-Quenching

Demand the Genuine—Refuse Substitutes.

At Soda Fountains or Carbonated in Bottles.
