# WOMAN TOOK FRIEND'S ADVICE

And Found Health in Lydia E. Pinkham's Vegetable Compound.

Windom, Kansas. - "I had a displacement which caused bladder trouble and

was so miserable I didn't know what to do. I suffered from bearing down pains, my eyes hurt me, I was nervous, dizzy and irregular and had female weakness. I spent money on doctors but got worse all the time.

"A friend told me about the Pinkham remedies and I took Lydia E. Pinkham's Vegetable Compound and was cured. I cannot praise your remedies enough for I know I never would have been well if I had not taken it."-Miss MARY A. HORNER, Route No. 2, Box 41, Windom, Kansas.

Consider Well This Advice. No woman suffering from any form of female troubles should lose hope until she has given Lydia E. Pinkham's Vegetable Compound a fair trial.

This famous remedy, the medicinal ingredients of which are derived from native roots and herbs, has for nearly forty years proved to be a most valuable tonic and invigorator of the female organism. Women everywhere bear willing testimony to the wonderful virtue of Lydia E. Pinkham's Vegetable Compound.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

# PESTS OF SHADE TREE GOAT'S MILK IS EXCELLENT

Proper Protection Is Problem of Much Importance.

Sudden Losses Are Frequently Caused by Overwhelming Attacks of Leaf-Eating Insects-Keep Pests in Subjection.

(By S. A. FORBES.)
The protection of the shade trees and ornamental shrubs of our city parks against insects has been for several years a problem of increasing importance. Many of the most desirable trees and shrubs are liable to show destruction by obscure insect pests little understood, if at all, by those immediately concerned.

Trees which have grown for years becoming more attractive, more valuable and more highly valued year by year, begin to weaken and decay, and

A Trap for the Elm Leaf-Beetle, Made of Strawboard and Smeared With Tanglefoot.

is often due to borers or the scale insects or beetles, the presence of cow, they are more or less valuable. which has not been detected or suspected, but which injuries might have been prevented if the facts had been known in time. More sudden losses are caused by overwhelming attacks of leaf-eating insects, which, although conspicuous, are not dealt with be cause proper measures of procedure are not known.

But, of late years, a great work has been accomplished along this line through proper experiments and observations. Careful examinations are being made of the affected trees and shrubs and the life history of the insects causing the injuries is being studied deeply. This is in order that authorities in control of parks, boulevards and streets, and owners of lawns and other private premises may become posted on the habits and characteristics of the pests, and know how to combat them.

Take, for instance, the elm tree. The spraying of large elms is, of course, a difficult and expensive operation, and the canker-worms, which cause great injury to these trees, are less susceptible to arsenical poisons than many other insects. A cheap and efficient method of protecting the tree is the preparation of adhesive preparations, for trapping the insects which creep up or down the trunks of the trees.

When the elm caterpillars are full grown they leave the tree to pupate in the earth, and the female moth emerging, being wholly without wings, can only reach the tree to lay her eggs by climbing up the trunk. If this is encircled at the proper time by a sticky band impassable by her or by young worms just emerging from the egg, the tree is virtually secure against canker-worm injury.

The sticky substance may be applied directly to the bark as a deterrent against the attack of borers, or may be used on bands of paper, tin, or strawboard. For the elm leafbeetle a trough shaped band, the inside of which is smeared with the

Trap for Elm Leaf-Beetle, Made of Tin-Lower Edge Should Be Secured About the Tree and Crevices Filled in to Prevent Larvae Passing Through.

in connection with spraying arsenate of lead on the leaves, it affords a very satisfactory means of keeping the elm pests in subjection.

Use for Cull Potatoes.

are usually unsalable can be converted work going by all means. into eggs and assist in adding to the profit from the farm.

Cowpeas in Corn. Every farmer should consider the hog so much as lice. Years of exsowing of cowpeas in he cowpeas, besides enriching with nitrogen, will furnish good w ter pasturage, and if the corn is cut p for silage the cowpeas will help balance the ration. About the best way to sow the cowpeas is to drill them cheapness in first cost and lasting in between the rows of the corn at qualities, most dipping vats are now rn Distributing Co., 507 5th Av., N. Y. the last cultivation of same.

Nothing Better for Children, as it is Almost Entirely Free From Dreaded Tuberculosis.

The common milk goat can be kept by the families who cannot afford to keep a cow and as the milk of the goat is highly nutritious it is an excellent substitute for the cow's milk. For children there is nothing better and it is a well-known fact that it is almost entirely free from tuberculosis.

But, answering a question of a correspondent as to whether it is profitable to keep common goats on the farm for the milking purposes, we should say that as a general rule it is

Goats require the proper feed just the same as other animals if they are expected to give large quantities of milk and unless one lives near a large city where goat's milk can be sold to hospitals and rich private patients of physicians, it cannot be disposed of to advantage.

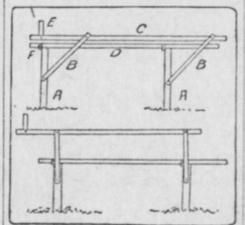

Common goats are cheap to begin with; they cost little if a small flock is kept on a large farm, as they can pick up a pretty fair living by browsing on the place.

On the other hand, the odor from the bucks is intolerable to most people. Goats are difficult to confine within bounds as they will climb fences of almost any height, and their favorite sunning place is the top of the barn roof. Altogether, we should say that the common milk goat is entirely out of place on the average farm. Used the owner does not know why. This to supply milk, for special purposes or by people who are unable to keep a

# USEFUL AS HAY RACK LIFTER

Arkansas Farmer Has Automatic Unloader for Heavy Wagon Bodies-How It Is Constructed.

I have an automatic unloader, for heavy hay racks and other wagon bodies that any one can operate who knows how to drive a team, writes F. Hathaway of Fort Smith, Ark., in the

Hay Rack Lifter.

Farmers' Mail and Breeze. Figure 1 per bu for car lots on spot. shows one section of the frame as it appears before the unloading, while Standard, 451/26451/26; No. 3, 44% Fig. 2 shows the position of the frame with the rack on it. The posts A are 4 by 4's set firmly into the ground. These posts should be set about 61/2 feet apart crosswise.

The length and height of the frames depend upon the racks used, BB are the lifting braces, which must be well made and securely bolted to the posts, yet not so tight as to hinder them from moving freely in the loading or unloading of rack. The pieces C are 2 by 6s bolted to the lifting braces. At their forward ends two short pieces of 2 by 4s (E) are bolted that strike against the rack as it is being driven between the frames, thus bringing up the lifting frames and raising the rack off the wagon.

Two crosspieces of 2 by 4s (D) are bolted lengthwise to the post to give the frames rigidity. Two hooks (F) are bolted at the forward end of D to stop the forward movement of the lifting frame. These are placed a little past the center so as to lock the frame while up. Two pawls notched at one end are bolted underneath the rack frame with the notched ends against the rear bolster of the wagon. This prevents the rack slipping back as it rises from the wagon.

Silage Too Bulky for Swine. Swine raisers are advised against feeding young swine extensively on silage, in a recent bulletin from the Iowa station. It is too fibrous and low in digestible nutrients to prove satisfactory for growing and feathing swine.

The hog has a digestive apparatus suited largely to concentrated feeds. Old sows will eat some silage; howsticky material, entraps great num- ever, if fed to them it should constibers of the descending larvae. Used tute only a small portion of their

Weekly Review of Trade and Market Reports.

Dun's Review says:

"Encouraging reports of business conditions predominate, and the growth of confidence is evidenced by increased preparations for fall and winter trade. All the leading markets continue quiet, yet in some instances the midsummer recession has been of shorter duration than customary.

"The prevailing optimistic feeling was apparently not impaired by the reported damage to corn, and the agricultural situation is still promis-Gradual recovery in spring wheat is accompanied by splendid years." harvesting returns from the South-

Bradstreet's says:

"Trade reports still present mixed aspects, with perhaps a sharper tenddendy to temporarily reflect quiet. In the East high rates for money and tariff uncertainties continue to act as repressive influences, while in the West adverse news of the corn crop has induced some hesitancy."
