ECZEMA ITCHED AND BURNED

Falmouth, Ky .- "Two years ago I was troubled with skin and scalp troubles. I would have pimples that would break out and form sores on my face and head, with terrible itching. The eczema on my face and head itched and burned and when I

scratched it, it made sores and I was very disfigured for the time being. My head became so sore I could not touch it with a comb; it became a mass of sores. My hair fell out gradually.

Uric Acid Is Slow Poison

Excess uric acid left in the blood by weak kidneys, causes more diseases than any other poison. Among its effects are backache, head-

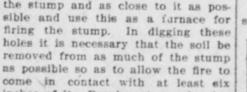

ache, dizziness, irritability, nervousness, drowsiness, "blues," rheumatic attacks and urinary disorders. Later effects are dropsy, gravel or heart disease.

If you would avoid uric acid troubles, keep your kidneys healthy. To stimu-late and strengthen weak kidneys, use Doan's Kidney Pills-the best recommended special kidney remedy.

A Mississippi Case

OAN'S HIDNEY FOSTER-MILBURN CO., BUFFALO, N. 1

as possible so as to allow the fire to come in contact with at least six inches of it. Burning stumps by this method is a slow process, but it necessitates no outlay of money and besides it may be done by one individual, while to pull them requires several men and a team.

The burning of stumps may be greatly hastened by boring a hole diagonally through the stump from the surface of the ground on one side into the furnace on the opposite side. This serves as a flue through which the heat and flame pass out, going through the stump and heating it up in onefourth the time required without the hole. A stump thus treated usually burns out with little effort on the part of attendants and in most cases to a sufficient depth beneath the surface to be out of the way of plows and cultivators.

A quick and fairly satisfactory method of removing stumps is by first blasting them with dynamite and then burning the shattered remains. It requires from one-quarter to one pound of dynamite to shatter the general run of pine stumps. In order to do this with the amount of explosive mentioned, it is necessary to place the dynamite into holes bored well into the stump and to tamp same thor-

alfalfa is especially valuable as a feed department of agriculture, Washingfor dairy cows for breeding animals ton, D. C. and for growing young stock. It is of considerable economic value when grown and fed on the farm, as it takes the place of high-priced, protein-rich feed it alone.

In the stomach of one toad seventyseven thousand-legged worms were

Common Garden Toad.

found; in another fifty-five army worms. One toad in captivity snapped eighty-six house flies in ten minutes; another was given twenty-four gypsy moths at one feeding. With so much required to satisfy the appetite of a toad at a single meal, it would be difficult indeed to put an estimate on the huge amount of insect food consumed in a single season.

The natural enemies of the toads are hawks, owls, crows, snakes and skunks, and poultry destroy many young toads. The little animals, which are to be found in every garden, should be protected with the same care as are the useful birds which frequent it.

ROTATE OR FAILURE, WHICH?

Weeds and Insects, Too Numerous to Mention, All Accumulate Under the One-Crop System.

The accumulation of noxious weeds. diseases, and insects on the farm is one of the most serious sources of loss. This results as a rule from the constant growth or too long continued culture of the same crop or class of crops on the same land. Wilt in various crops, bacterial diseases, grain rusts, and weeds and insects too numerous to mention all accumulate These pests often multiply to such can be avoided and the fertility of the if even ordinary precautions are used. systems for any locality or type of farming, so far as they have been developed, can usually be obtained from Because of the high protein content, state experiment stations or from the
