

Libby's Selected Olives

Every one from Seville, long famed as the home of the world's best olives. Only the pick of the crop is offered to you under the Libby label.

Sweet, Sour and Dill Pickles

Nature's finest, put up like the home-made kind and all your trouble saved. This extra quality is true of all Libby's Pickles and Combinations and there is real economy in their use. Insist on Libby's Libby, McNeill & Libby Chicago.

The perfect husband always belongs to another woman.

YOUR OWN DRUGGIST WILL TELL YOU Try Murine Eye Remedy for Red, Weak, Watery Eyes and Granulated Eyelids. No Smarting—Just Eye Comfort. Write for Book of the Eye by mail free. Murine Eye Remedy Co., Chicago.

No man is so selfish as to keep all his popularity to himself.

BEST REMEDIES FOR SORES AND ULCERS

Mr. C. A. Butler, of Salem, Va., writes: "I can safely say that Hancock's Sulphur Compound is the best remedy I ever used for sores. One of my little boys, eight years old, had a solid sore all over his face, we tried different kinds of medicine, but none seemed to do any good. Our son, nineteen years old, had a sore on his leg for three months and nothing did him good. We used Hancock's Sulphur Compound on both and it did its work quickly and it was not over a week until both were well." Hancock's Sulphur Compound is sold by all dealers. Hancock Liquid Sulphur Co., Baltimore, Md.—Adv.

Give Young People Useful Work. The boy or girl who is given some useful work to do at home is helped to realize and to enjoy the responsibility of doing the task and doing it well and is thus gaining in character-building. It may be that a boy is expected to keep a yard in order, go on errands, or relieve someone of care; or that a girl is required to attend to some household tasks, to dust a room, or keep a desk in neat condition, arrange flowers for the table, or make a dainty dessert. Little things, faithfully done, help to form habits of neatness, duties may seem small, but they are important beginnings.

An Ominous Adage. When a lady patient living far from town had to telephone for her physicians she apologized for asking him to come such a distance. "Don't speak of it," said the doctor cheerfully; "I happen to have another patient in that vicinity, and can kill two birds with one stone."—Ladies' Home Journal.

Across the Seas. Mrs. Joseph Chamberlain unveiled a memorial at Weymouth, England, to her ancestor, John Endicott, first governor of Massachusetts Bay, and Richard Clark, who sailed from Weymouth for New England 300 years ago. Louis Cook, representing the town of Weymouth, Mass., was present.

HIT THE SPOT. Postum Knocked Out Coffee Ails.

There's a good deal of satisfaction and comfort in hitting upon the right thing to rid one of the varied and constant ailments caused by coffee drinking.

"Ever since I can remember," writes an Ind. woman, "my father has been a lover of his coffee, but the continued use of it so affected his stomach that he could scarcely eat at times."

"Mother had coffee-headache and dizziness, and if I drank coffee for breakfast I would taste it all day and usually go to bed with a headache."

"One day father brought home a pkg. of Postum recommended by our grocer. Mother made it according to directions on the box and it just 'hit the spot.' It has a dark, seal-brown color, changing to golden brown when cream is added, and a snappy taste similar to mild, high-grade coffee, and we found that its continued use speedily put an end to all our coffee ills."

"That was at least ten years ago and Postum has, from that day to this, been a standing order of father's grocery bill."

"When I married, my husband was a great coffee drinker, although he admitted that it hurt him. When I mentioned Postum he said he did not like the taste of it. I told him I could make it taste all right. He smiled and said, 'try it.' The result was a success, he won't have anything but Postum."

Name given by Postum Co., Battle Creek, Mich. Read "The Road to Wellville," in pgs.

Postum now comes in two forms: Regular Postum—must be well boiled—15c and 25c packages. Instant Postum—is a soluble powder. Made in the cup with hot water—no boiling—30c and 50c tins.

The cost per cup of both kinds is about the same.

"There's a Reason" for Postum.

—sold by Grocers.

USEFUL ON THE FARM

BOBWHITE AND RUFFED GROUSE EAT MANY INSECTS.

Every Effort Should Be Made to Augment Number of Birds by Protecting Them From Enemies and by Providing Good Nests.

(By H. W. HENSHAW.) At the present time many kinds of useful birds need direct intervention in their behalf as never before. The encroachments of civilization on timbered tracts and the methods of modern intensive cultivation by destroying or restricting breeding grounds of birds, tend to diminish their ranks. The number of insect pests, on the other hand, is all the time increasing by leaps and bounds through importations from abroad and by migration from adjoining territories. Every effort, therefore, should be made to augment the numbers of our useful birds by protecting them from their enemies, by providing nest-

The Ruffed Grouse.

ing facilities, and by furnishing them food in times of stress, especially in winter.

Birds occupy a unique position among the enemies of insects, since their power of flight enables them at short notice to gather at points where there are abnormal insect outbreaks. An unusual abundance of grasshoppers, for instance, in a given locality soon attracts the birds from a wide area, and as a rule their visits cease only when there are no grasshoppers left. However unlike they may be in appearance, structure, and habits, all are similar in one respect—they possess a never-flagging appetite for insects and weed seeds. Two useful birds—quite unlike in appearance, but similar in that they befriended the farmer, are the bobwhite and ruffed grouse. The former is known everywhere by the clear whistle that suggests its name. The bobwhite is loved by every dweller in the country and is better known to more hunters in the United States than any other game bird. It

The Bobwhite.

is no less appreciated on the table than in the field, and in many states has unquestionably been hunted too closely. Fortunately it seems to be practicable to propagate the bird in captivity, and much is to be hoped for in this direction. Half the food of this quail consists of weed seeds, almost a fourth of grain and about a tenth of wild fruits. Although thus eating grain, the bird gets most of it from stubble.

The beautiful ruffed grouse is found in the northern two-thirds of the United States and in the forested parts of Canada. This, the famed drummer and finest game bird of the northern woods, is unusually wild and wary and under reasonable protection will withstand the attacks of hunters. Moreover, when reduced in numbers, it responds to protection in a gratifying manner and has proved to be well adapted to propagation under artificial conditions. Wild fruits and browse make up the bulk of the vegetable food of this species. The most important pests devoured by this bird are the potato beetle, clover-root weevil, the striped flea beetle, grape vine leaf beetle, May beetles, grasshoppers, cotton worms, army worms, cutworms, the red-humped apple worm, and sawfly larvae.

While the economic record of the ruffed grouse is commendable, it does not call for more stringent protection than in necessary to maintain the species in reasonable numbers.

Feeding Goslings. Goslings like cracked corn stirred up in skim milk, so do ducks. But if you have left ducks or goslings without water too long, don't feed them first, or give too much water. Let them drink a little, then take it from them for a while. Ducks especially will die quickly if deprived too long of water.

Potatoes Quarantined. Effective August 1 comes a quarantine against potatoes from Maine, declared by the United States department of agriculture. On account of the prevalence of powdery scab in that state the federal government will now take charge of the work of preventing the spread of the disease.

MANGE AND LICE TREATMENT

Variety of Coal-Tar Dips on Market Are Satisfactory If of Sufficient Strength and Warm.

(By M. H. REYNOLDS, Veterinarian, Minnesota Experiment Station.) Treatment of hogs for mange should begin with a vigorous scrubbing with brush, soap, and soft water so as to remove the crust. A variety of coal-tar dips are on the market. Most of these are quite satisfactory if of sufficient strength, and warm enough (about 110 degrees F. Do not boil). The hog should be given a good thorough soaking in the dip, not less than two minutes. The hog must go under, head and all, at least once. Treatment must usually be repeated one or more times at intervals of eight days. Treat the whole herd and do it thoroughly.

An effective dip can be made from crude petroleum as follows:
4 gallons crude oil,
16 gallons water,
1 pound soap.

The soap should be dissolved in the water by heating. An emulsion is then made by adding the oil and thoroughly churning the mixture. Water in different sections differs very greatly in the way it will combine with soap. If the amount of soap does not give a good emulsion simply add more soap. Avoid oily dips in cold weather.

While the hogs are taking the dip, thoroughly clean and then disinfect the pens. In case of true mange the fence posts, trees, and everything against which the hogs can rub must also be disinfected. Use a strong disinfectant and plenty of it. After treatment do not put hogs back into lousy or mangy pens.

DISEASE OF THE ASPARAGUS

Rust is Common and Familiar to Every Grower of Vegetable—Can Be Controlled by Spraying.

(By C. J. BETHUNE.) Asparagus rust is a very common disease and is familiar to every grower of this vegetable. It has three distinct stages. The first is known as the "cluster-cup" stage or the spring form. In this stage the spores are produced in cup-shaped pustules, which are grouped in oval clusters and are orange yellow when mature. This stage is seldom noticed by asparagus growers.

The second or summer stage is the one usually first noticed by the growers, and called by them "red-rust" on account of the elongated reddish-brown pustules which are seen breaking through the skin of the stem. In these pustules reddish, one-celled spores are produced, known as uredospores. It is the summer or "red-rust" stage that the disease spreads most rapidly and appears to do the greatest amount of harm.

Towards fall, or whenever the vitality of the asparagus plants is reduced, the third and final stage, known as the "black rust" or winter stage appears, due to the fact that the red spores in the pustules are replaced by dark-brown, two-celled, thick-walled spores. These germinate in the spring and produce the first stage again.

Rust may be largely controlled by spraying with resin-bordeaux from July to September, at intervals of ten days or two weeks. This is a difficult and rather costly undertaking and will hardly pay except on large areas. Dusting with flowers of sulphur has given good results. Cutting and burning all the diseased stems will help to keep the rust in check. Rust resistant varieties should be planted.

TESTS IN GROWING APPLES

Department of Pomology of New York State Leases Orchard for Studying Methods of Renewal.

At Port Byron, N. Y., the department of pomology of New York state, has leased an orchard consisting of eight acres planted with Baldwin and Rhode Island Greening apples, which will be used for studying methods of renewal.

The trees, which were originally too close, have now grown together so that the branches interlock. In one part of the orchard every alternate tree will be taken out, and in other parts the trees will be severely headed in or thinned.

The problem presented is a common one, many orchards in New York state being in a similar condition. Different methods of renewal that are recommended will be tested.

The fruit obtained will be used for testing the various fruit graders on the market.

Gospel of Prevention. The gospel of clean milk is not a stranger gospel, but a gospel of prevention.

The Markets

NEW YORK.—Wheat—Spot irregular; No. 2 hard winter, 93½c; c of New York; new, No. 2 red, 87½c; c of July shipments; No. 1 Northern Duluth, 97½c; No. 1 Northern Manitoba, 99c f o b afloat.

Corn—Spot weak; No. 2 yellow, 76½c; c of prompt.

Butter—Process, extras, 22@22½c. Cheese—Easier; receipts, 2,200 boxes; State, whole milk, fresh, specials, 14½@15c.

Eggs—Irregular; receipts, 20,100 cases. Nearby, hennery browns, 24@26c.

Dressed Poultry—Firm; Western chickens, frozen, 14½@18c; fowls, 13@18½; turkeys, 25@26c.

PHILADELPHIA.—Wheat—No. 2 red spot and June, 94@94½c; do do, July, 83½@84½c; No. 1 Northern Duluth, 98½@99½c.

Corn—No. 2, yellow, 79@79½c; steamer yellow, 78½@79c; do do, No. 3, yellow, 78@78½c.

Oats—No. 2 yellow, 46½@47c; standard white, 46@46½c; No. 3 white, 45@45½c; No. 4 white, 43½@44½c.

Butter—Western, solid-packed creamery, fancy specials, 29½c; extra, 27½c; extra firsts, 27c; firsts, 26½c; seconds, 22@25c; nearby prints, fancy, 31c; average extra, 29@30c; firsts, 26@27c; seconds, 23@25c; jobbing sales of fancy prints, 35@37c.

ITCHING, BURNING ECZEMA

R. F. D. No. 1, Box 15, Corapeake, N.C.—"My baby began with the eczema itching and burning. It broke out all over his head and face, legs and arms with little pimples. I did not sleep any in about four months. He cried and itched all night and day for four months until his head and face were matter all over. He was disfigured badly. His clothing would be difficult to remove at times. I tried two treatments with no success at all and I had almost decided there was no cure for it. I was told by a friend that Cuticura Soap and Ointment would cure it. I washed the child with the Cuticura Soap and warm water two or three times a day, then anointed him all over with the Cuticura Ointment. He took a great change and slept night and day. I used Cuticura Soap and Ointment six months and he was cured completely." (Signed) Mrs. Arma Lee, Mar. 24, 1914.

Cuticura Soap and Ointment sold throughout the world. Sample of each free with 32-p. Skin Book. Address postpaid "Cuticura, Dept. L, Boston."—Adv.
