W. H. Patterson's canvas of Centre county, soliciting votes as a candidate for State Senator, has been manly and gentlemanly. He has spoken generously and kindly of both his competitors upon all occasions. He however does allege that his thirty-seven years of active practice as a lawyer will and should be of benefit upon the floor of the Senate, advocating the interests of this Senatorial District.

**Losses Ends of Fingers in Machine.**

The Reporter's Boalsburg correspondent reports that William Stover met with an accident one day last week which resulted in the loss of the ends of several fingers of his right hand. He had risen early to boil applebutter at his home and wanted to make a patent stirrer, drilling the holes on a power machine which he had set up not far from his home to expedite the work on the new J. M. Ross building which he is erecting. While engaged in drilling the holes his mind for a moment was taken off his work and his right hand was caught in the jointer. All the fingers were crushed and he was taken to the Bellefonte hospital where an operation was performed. He is keeping in good spirits and superintending the work on the new building.

**POTOMAIN POISONING.**

What the State Commissioner of Health Has to say Concerning This Common Ailment.  
Potomain poison causes a serious disturbance of the digestive organs due to the products of germ life. Generally speaking ptomaines are the result of decomposition of food stuffs. This is caused by bacteria. In the process of their growth a poison is produced which effects a violent disturbance if introduced into the digestive system. Sausage, decomposed fish, cheese, ice cream, milk, canned meats and vegetables are the food stuffs most commonly responsible for ptomaine poisoning. Cooking will not always destroy the ptomaine in food stuffs. It kills the bacteria but the poisonous substances will remain.  
Unfortunately our sense of taste in the majority of instances does not warn us of the presence of these poisons. This is often due to the common practice of over seasoning our food stuffs and the excessive use of condiments. Also it is the practice of many canners to add preservatives which makes it possible for them to use decomposed meats or vegetables. If foods for canning are properly inspected before their preparation and the decayed portion eliminated, they can be made to keep without the addition of injurious preservatives.  
Potomain poisoning as a rule develops a few hours after eating and progresses rapidly.  
In the treatment of ptomaine poisoning the first essential is to wash out the stomach and empty the intestinal canal as much of the decomposed food as possible. These things may be done while awaiting the arrival of the physician.
