INTERNATIONAL HARVESTER MACHINES. SOME POSITIVE FACTS. If in need of a manure spreader you cannot buy a better spreader than the LOW SPREAD SPREADER, and in fact, you cannot afford to buy any other. It is noted for its durability and reliability. It is an all steel spreader, and being low down makes it easy to load. Wide wheels, which give better traction, and fitted with best lugs known. The position of the rear axle carries a sufficient portion of the weight, thus enabling good work, regardless of the condition of the soil. This spreader can be had with or without the wide spread attachment. When the wide spread attachment is used it will spread a width of eight or nine feet. Call around at our place of business and let us point out to you many more features good of the LOW SPREAD SPREADER.

Become Acquainted With the BLUEBELL Cream Separator. THERE is a good deal more to buying a cream separator than just paying out your money for any machine you happen to take a fancy to. You can find this out after you buy, or you can find it out before you buy. Generally the latter is the cheaper of the two. For instance, this BLUEBELL cream separator you are practically buying two machines in one—a clarifier and a separator. In some separator bowls, whatever foreign substances are in the milk that the strainer will not remove, collect on the sides of the bowl, interfering with the skimming and contaminating all the milk and cream that goes through the separator. In this machine these foreign substances are collected into the clarifying chamber before separation takes place. Unless you know this separator you can hardly realize the difference that this feature makes in the separation of milk.

Our Aim to Explain International Harvester Engines. ALL the features of a good engine cannot be learned in a day. Yet every man who buys an engine should know all the those features and should be able to make comparisons with any engine offered him. There are certain features of design, material, machining and construction necessary to produce best results. These results are what you are interested in, because they mean economy and the ability to do your work. The design is important. Of two engines with the same weight, same bore and stroke, running at the same speed, one will develop anywhere up to 50 per cent. more horse-power than the other, and may last twice as long simply because of difference in design. International Harvester engines all have those features. The first time you are in town, drop in and we will show you some of the reasons why I H C engines develop so much power and last so long. H. C. SHIRK - - Centre Hall, Pa.

I wish to have you call and examine our FALL and WINTER STOCK -OF- Shoes, Rubbers, Underwear, Dry Goods, Sweaters, Notions, etc. A Full line of Rubbers, such as: BALL BAND, GOODRICH Heavy LAMBERTVILLE, HOOD LIGHTWEIGHT, Etc.
