

PAIN AND INFLAMMATION DISAPPEAR WHEN YAGER'S LINIMENT IS APPLIED

The Best Known Remedy For RHEUMATISM NEURALGIA SPRAINS BRUISES PAIRS IN BACK WOUNDS, &c.

The Finest External Remedy For Man and Animals SOME TESTIMONY:

JAS. E. BAUM, Witty Hawk, N.C. writes—"I suffered with a most severe pain in my side, rubbed well with Yager's Liniment and the relief was instant. Also had a lump on my leg which caused a good deal of pain and trouble, after rubbing a few times with the liniment it entirely disappeared. My mother had suffered for some time with a pain in the breast. She used Yager's and after several applications it disappeared entirely. Many of my neighbors use it and claim there is nothing like it for relieving pain."

Long Journey.
A railroad from Nome to Cape Horn is being considered, and sometimes we may be able to take a through sleeper from one end of the American continent to the other. In that case we would sample all kinds of climate from arctic to tropical and we would encounter endless variety of surface and scenery. Popular Mechanics says that several routes for such a railroad are being considered, but which ever one may be chosen the lines already built and covering over half the distance would be utilized. The fact that these exist makes the project seem less like a dream, but if we smile over it we might remember that men of affairs laughed at Cecil Rhodes when he suggested a railroad from the Cape of Good Hope to Cairo—the entire length of Africa—but that road is now being built—is more than half done, indeed.

Logical.
Nurse—Goodness me, what 'ave you been doing to your dolls?
Joan—Charley's killed them. He said they were made in Germany, and how were we to know they weren't spies?
—Punch.

Most women have a mania for the kind of garments that are more ornamental than useful.

When a man has nothing to say he is called upon to make a speech.

To Build Strong Children

Supply their growing bodies with right food, so that Brain, and Muscle, and Bone development may evenly balance.

Grape-Nuts FOOD

was originated to supply, in proper proportion, the very elements required by the human body for growth and repair.

To supply children a dish of Grape-Nuts and cream for breakfast regularly, is to start them on the road to sturdy health.

"There's a Reason" for Grape-Nuts

Sold by grocers.

HINTS FOR DAIRYMAN

Keep Cows Clean by Careful and Easy Brushing.

Animals Bred to Come-in in Fall Are in Best Flow of Milk During Winter—Keep a Record and Weed Out Weak Producers.

Keep the old hair brushed off as fast as it becomes loose and do not allow the cow to get it mixed with her feed or get it in her mouth while licking herself when turned out in the yard.

To some it may seem as an over-refinement to brush a cow, but there is no doubt of its being useful and beneficial when done in an easy and careful manner.

If cows are bred so as to come-in in the fall they are in their best flow of milk during the winter. By spring, when they begin to fall off in milk the grass comes in to stimulate a larger flow and they keep it up until time to be dried off for the next calf. This gives the nonmilking period at a time in the year when butter and milk are the lowest.

Don't be afraid to begin feeding early in the fall if the pastures are short, for it does not pay to have cows fall in their milk at this time in the year.

The total solids in milk are largely dependent on the quality of the food given, while the richness of the ingredients depends on the breed.

We know a little dairy of 15 cows which has brought in its owner just about an even hundred dollars a month all this season. The cows are selected milkers and the owner is a careful man in every way. This kind of dairying pays.

The farmer should keep a record of his individual cows in order that he may weed out the poor producers. The value of the time required in the use of the scales, milk sheet, Babcock test and record book will be

Strawberry, Prize-Winning Ayrshire Cow.

more than repaid by the elimination of one unprofitable animal from the herd.

Don't let the cows sleep out on cold, rainy nights when you need a fire to keep warm in the house. It takes feed to heat her body and you cannot get as good returns at the pail by this treatment.

What is each of your cows costing you?

It is a good plan to test the cows occasionally to see if there are any deadheads in the herd. Might be a good plan to watch the owner carefully, too. He is just as susceptible to deadheadedness as the cows.

Before you rid the dairy herd of the "robber cow" make sure that she is having a fair show by being supplied with the proper rations, care and shelter.

Keep the fall calf growing and you will have a good one to turn out on pasture in the spring.

In the feeding of calves there is a splendid opportunity for a man to exercise patience and kindness.

A large part of the danger from dirt in milk can be avoided by using a pail with a hood.

MAKING RAINY DAYS USEFUL

Many Little Odds and Ends to Be Attended to Instead of Lounging About and Napping.

(By WALTER B. LEUTZ.)

Instead of spending the rainy day in lounging about and napping at intervals, the farmer may find it a day of profit to him. There are broken pieces of harness or machinery that need attention. The harness needs oiling, some sick stock may need doctoring. The rainy day is an opportunity for this work. I know a man who has built a tool house for rainy day work. Here he mends harness, makes new parts for machinery, manufactures new double and single trees to replace the broken ones. Often he makes some article convenient for the home. In fact, his work shop often consumes more of his time than the rainy days give him.

What Should Have Been.

When pigs are kept eight months, when fully as good weights could have been obtained at six months, the profit is anything but what it should have been.

DISEASE OF FOOT AND MOUTH

Trouble Caused by Virus or Germ That Passes Through Finest Filter—Protect Healthy Animals

Foot-and-mouth disease has broken out in several middle West states. It is very contagious and is caused by a virus or germ that passes through the finest filter. The germ has never been seen or cultivated. It is spread by persons who have handled infected animals, by all classes of live stock, hay and straw from infected farms, green hides and fleeces, and by any transportation agency. Every outbreak that has occurred in this country has been traced to imported infection.

The chief symptoms of foot-and-mouth disease are small "water-blisters" or vesicles which develop on the membrane covering the lips and tongue, and upon the skin of the feet or the udder. Cattle are most susceptible to the disease, then follow hogs, sheep and goats. Persons rarely become infected. Naturally infected animals may show symptoms after two days but sometimes not until 11 days after having been exposed. A moderate fever develops in the first or second day. Cattle "slobber" when eating and dribble long, sticky threads of saliva from the corners of the mouth. The animals get lame as a result of blisters appearing between the toes. These blisters soon break, discharge a straw-colored fluid and leave raw sores which become infected with dirt, so that pus forms.

In the great majority of cases, recovery will occur if the disease is allowed to run its course. The mortality amounts to less than 1 per cent by a rule unless complications set in. However, on account of the serious consequences which would follow an uncontrolled outbreak, both federal and state live stock sanitary authorities exert every means to stamp out the disease. All cloven-footed animals on infected farms are killed and buried in quicklime. The premises are thoroughly disinfected and quarantine rules strictly enforced. Treatment is out of the question.

Healthy animals should be protected in every way possible from coming in contact with infected objects to prevent introduction of the disease. It is advisable to keep stock out of the highways and away from pastures bordering on main-traveled roads.

Among the reasons why every effort should be made to stamp out the disease at once are the following: It interferes with the sale of animals both locally and with other states and countries; it brings about the closure of fairs and stock markets; it restricts the supply of milk and beef. It behooves every farmer to co-operate in the fullest way to prevent the further introduction of the disease into the state.

GOOD PRUNING SUGGESTIONS

Winter Cutting Increases Vigor of Plant—Implement Illustrated for Cutting Out Canes.

Do not cut out large limbs. Never prune in frosty weather. Frost-bitten wounds are slow to heal. Never leave the stubs in cutting off limbs.

Prune annually, but never heavily. Wounds heal most rapidly in spring. Heavy pruning conduces to wood growth.

In transplanting cut back top and root.

Keep the tree free of suckers. Summer pruning induces fruitfulness.

Torn wounds are generally fatal. Paint over the larger wounds. A heavy pruning is always followed by a heavy growth of suckers.

Winter pruning increases the vigor of the plant.

The implement shown in the illustration will be found quite handy in cutting out brier canes. It has a sharp

For Cutting Out Brier Canes.

edge (B) its entire length, and is cut away at the back of its butt-end. A socket is formed from sheet-iron, having edge-flanges attached to opposite sides of blade.

ATTENTION TO COLT'S FEET

Neglect Will Contribute Largely to Poor Set of Legs, Influencing Efficiency of Animal.

(By W. H. PALMER, Ohio College of Agriculture.)

Poor feet and legs found upon the large majority of horses are due directly to the lack of proper care of the colt's feet. To neglect to see that the foot grows out evenly is to contribute to a poor set of legs which influence directly the efficiency of the horse when used later. As the colt grows, it may throw more weight on one side of its feet than the other, causing that side to wear faster and producing an unbalanced condition. Nature, in her attempt to overcome this, causes the bones of the legs to adjust themselves to this condition, resulting in poorly placed and developed legs. Then the added weight to one side may cause the uneven development of the hoof. The ideal foot is one that is large and round, with the wall at the quarter sloping the same on the inside as the outside and the heels wide.

GOOD PROSPECT FOR SPORT

Quail Not Only in Profusion, But Seemingly of High Order of Intelligence.

They were talking about fine hunting the other night when Dr. Elmer B. Cooley, Uncle Joe Cannon's congressional opponent, was reminded of an incident that happened in his home state.

At the beginning of the hunting season, the doctor said, an enthusiastic nimrod named Smith telegraphed a hotel friend in the game region for reservation, and at the appointed time he was right on the job.

"Hello, Harry!" he exclaimed, saluting mine host, as he dragged his dogs and guns to the hotel veranda. "Everything all right?"

"Couldn't be better," was the prompt response of mine host.

"How about the game?" returned the sportsman, eagerly. "Are there any quails around?"

"Well, I should say so!" declared mine host. "Every time the cook throws a refuse piece of toast out of the back window four or five fat quails fight to see which one shall lie down on it!"—Philadelphia Telegraph.

To Get Rid of Pimples.

Smear the affected surface with Cuticura Ointment. Let it remain five minutes, then wash off with Cuticura Soap and hot water and continue bathing a few minutes. These fragrant, super-creamy emollients quickly clear the skin of pimples, blackheads, redness and roughness, the scalp of dandruff and itching and the hands of chaps and irritations. For free sample each with 32-p. Skin Book address post card: Cuticura, Dept. X, Boston. Sold everywhere.—Adv.

Defends American Boys.

Mrs. Joseph Gazzam of Philadelphia says that when she was in Berlin and Dresden she heard much criticism of the way in which Americans coddle their boys, and the Germans declared that if ever the Americans expected to do any fighting they must change their methods of training boys. Mrs. Gazzam replied that much as American boys are "coddled," no one ever heard of an American girl cleaning her brother's boots. Our men may be spoiled, she said, but not at the expense of the girls.—Woman's National Weekly.

Playing Chickens.

The egg setting process greatly interested Jack Hastings, three years old. Recently Jack and his sister, Margaretta, just about one now, were playing like the Hastings' back porch was a chicken yard. Jack conceived the idea that it was about time for Margaretta to "set," so he went to the refrigerator, brought out three dozen nice new eggs, quoted at 30 cents a dozen.

"Sit on 'em, Gretta," he said.

"And Margaretta sat.

Important to Mothers

Examine carefully every bottle of CASTORIA, a safe and sure remedy for infants and children, and see that it bears the Signature of *Dr. J. C. Fletcher* in Use For Over 30 Years.

Children Cry for Fletcher's Castoria

Hers.

"I suppose that you and your wife are two souls with but a single thought?"

"That's about the situation, but about half the time she will not tell me what that thought is."

Modern Bookkeeping.

"Under what head shall I place your wife's millinery account, Mr. Blinks?"

"Overhead charges, Smith."

Intended to Be.

"Are you worried over that elpher message?"

"Nay, it is naught to me."

A Slam.

"Do you believe in dreams?"

"I did till I met you."—Harvard Lampoon.
