# SYRUP OF FIGS FOR A CHILD'S BOWELS

It is cruel to force nauseating, harsh physic into a sick child.

Look back at your childhood days. Remember the "dose" mother insisted -castor oil, calomel, cathartics. you hated them, how you fought

st taking them. our children it's different. who cling to the old form of simply don't realize what they The children's revolt is well-founded. Their tender little "insides" are injured by them.

If your child's stomach, liver and bowels need cleansing, give only delicious "California Syrup of Figs." Its action is positive, but gentle. Millions of mothers keep this harmless "fruit laxative" handy; they know children love to take it; that it never fails to clean the liver and bowels and sweeten the stomach, and that a teaspoonful given today saves a sick child tomor-

of "California Syrup of Figs." which has full directions for babies, children of all ages and for grown-ups plainly on each bottle. Adv.

### TAKE SALTS TO FLUSH KIDNEYS IF BACK HURTS

Says Too Much Meat Forms Uric Acid Which Clogs the Kidneys and Irritates the Bladder.

Most folks forget that the kidneys, like the bowels, get sluggish and clog ged and need a flushing occasionally. else we have backache and dull misery in the kidney region, severe headaches, rheumatic twinges, torpid liver acid stomach, sleeplessness and all

sorts of bladder disorders. You simply must keep your kidneys active and clean, and the moment you feel an ache or pain in the kidney region, get about four ounces of Jad Salts from any good drug store here, take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and is harmless to flush clogged kidneys and stimulate them to normal activity. It also neutraifzes the acids in the urine so it no longer irritates, thus ending blad-

der disorders. Jad Salts is harmless; inexpensive; makes a delightful effervescent lithiawater drink which everybody should take now and then to keep their kidneys clean, thus avoiding serious com-

plications. A well-known local druggist says he gells lots of Jad Salts to folks who believe in overcoming kidney trouble while it is only trouble.-Adv.

### DUST BOX FOR WINTER CLEAN AND OIL THE HARNESS

Methods of Eradicating Lice Practiced by Poultrymen.

Outdoor Wallow Shown in Illustration Is Simple in Construction and Efficient in Operation-Lice Powder Recipe.

During the winter and early spring months hens are likely to be infested with lice. This is often because they are confined to the poultry house dur- horse. ing this period and do not have access to their accustomed dust wallow.

Two methods of eradicating lice are commonly practiced by poultrymen. One is to dust each hen with a good ough washing, in rain water if poslice powder; the other is to provide a dust wallow.

Both of these methods have disadvantages. The first requires considerable labor, for experience has proved that two applications of lice powder, eight or ten days apart, are necessary thoroughly to rid the fowl of lice. The second method, consisting of an open or partly inclosed box filled with dusting material and located in the poultry house, is unhealthy and harmful,

A box that will not fill the air of the pen with particles of dust is an improvement. The outdoor wallow shown in the illustration is simple in construction and efficient in operation. It may be constructed of a box or any kind of lumber.

One side of the box is removed and replaced by a cellar sash. A standard

Rear View of Dust Box.

size, two-light sash is cheap, and pro vides sufficient light to make the wallow attractive. The top should slope somewhat, so it will shed water, and muddy. should be covered with roofing paper. The rear side of the box, next to the poultry house, is also removed, with the exception of a single board eight inches high at the bottom, which holds in the dusting material. On each side of the box, directly under the roof, poultry netting is used to cover the opening caused by the slope. The free circulation of air thus maintained tends to settle the dust.

The opening leading from the house to the wallow is covered with a piece of muslin which is slit in the middle. This keeps the dust from coming into the house.

The dusting material used in the sand, one part land plaster or gypsum and a quart of lice powder will be found effective. A good recipe for lice powder is as follows:

Place two and one-half pounds of plaster of paris in a pan. Then mix together three-fourths of a pint of gasoline and one-fourth of a pint of 95 per cent crude carbolic acid. Stir the plaster of paris while you add the liquid. When thoroughly mixed the material should be rather crumbly. It should then be dried and sifted, when it is ready for use. Keep in a tight can or jar.

### CAUSE OF POOR CORN YIELD planting.

Inferior Quality of Seed Is Given as Chief Reason for Small Average in United States.

The average per acre yield of corn in the United States is less than 26

bushels-not half a crop. Poor seed is the greatest cause of the poor yield of corn. Just one small a good plan. The planting may coneight-ounce ear of corn added to each hill will raise the average in the (is not wet and sticky) and the ground United States to 52 bushels per acre. not too hard. double the yield and value of the crop and add about \$1,700,000,000 to its total value.

Corn from a standpoint of acreage yield and value exceeds every other crop.

Wherever corn is grown there you find high-priced land and prosperous

No other crop can replace corn, but corn can readily take the place of any other grain crop.

Corn is put to a greater number of uses than any other crop that grows. There are greater possibilities for improvement, yield and quality of corn than any other crop.

### SILO IS SAFEST 'NVESTMENT

Practical Form of Insurance Against Shortage of Feed at Critical Time During Winter.

A silo is the safest investment a farmer who keeps stock can make. It is a practical form of insurance against shortage of feed at a critical

time. It maintains the herd and flock in better condition and more economically in winter and supplements pastures

during summer drought. It may also save a corn crop hit by an untimely frost, for frosted corn can be utilized in this way which would otherwise be almost a total loss.

Hoghouses Need Good Roofs. The hoghouse should have as good a roof as any building on the farm. A leaky roof is death to early spring pigs and also is very uncomfortable hog will pay as good returns for quarters as any animal on the farm.

Good Plan to Perform the Task Imme diately After Year's Work Is Finished in the Fall.

Harness should be cleaned at least once and where it is used continuously, twice each year. It is a good plan to clean the farm harness immediately after the year's work is finished in the fall or winter. The harness which is kept well cleaned and oiled will wear a great deal longer and give less trouble than one that is not. Moreover, it is more comfortable to the

In the first place the harness should be taken entirely apart and all the buckles and metal parts removed. The leather is then subjected to a thorsible, to which has been added a handful of good washing powder. Thirty minutes soaking will assist greatly in removing the dirt. After soaking, lay the straps out on a smooth board laid crosswise of the tub or vat and scrub with a stiff brush. After washing, hang the pieces up to dry, rub them with harness blacking which will prevent their turning red.

When completely dry, take a cloth and rub the harness until it takes on a polish and always rub the leather with the grain. After polishing apply, a day or two apart, two coats of neat's-foot oil to which has been added a little kerosene and a small amount of lampblack.

Leave the harness hang till dry, but do not put it in the sun or too close to artificial heat. Sponge it off with castile soap and water to prevent gumminess, fasten the pieces together and it is ready for use. Occasional sponging with soap throughout the year will keep it in good shape.

### EXCELLENT PEN FOR FODDER

Fodder That Has Been Trampled Upon, or is Soiled and Muddy, is Not Relished by Stock.

Cattle do not relish fodder after it has been trampled on or is soiled and

A long, narrow portable rack which

Good Rack for Fodder.

an excellent pen in which to feed such roughage.

### PLANTING FOR BEST RESULTS

Place Tree Roots in Connection With Soil as Nearly as Possible as Before Removal.

The perfection of planting consists in placing the tree roots in connection with the soil as nearly as possible in the same direction as that in which they were before removal and but slightly-one or two inches-deeper than the tree stood in the nursery. If the season is very dry it will be a good plan to give each tree a bucketful or two of water when nearly done

Planting should not be done too early-not before the leaves will come off easily. They must in no case be left on the trees, even for an hour or two after digging, as they carry off moisture rapidly, and the trees would soon be wilted to a certain extent; and to strip off the leaves by hand before their office is completed is not tinue as long as the soil works well

### INOCULATE LAND FOR CLOVER

Sow Seed Two or Three Years in Succession Until Vigorous Growth of Legume Has Been Secured.

Land can be inoculated for crimson clover, vetch and alfalfa or sweet clover by sowing the seed on it two or three years in succession. If this method is chosen, a small plot of a quarter-acre may be set aside and the crop planted each fall or spring until the vigorous growth of the legume and the nodules on the roots prove that the land is inoculated. Then dirt may be hauled from this and scattered

over the other land to be inoculated. Another way to get the farm inoculated is to sow just a little of the seed mentioned above with some other crop that is not cultivated and in that way get the inoculation distributed

over the entire place. However, the quicker and better plan is to get some dirt from a field that has grown the plant or get a commercial culture and inoculate the seed and make a success the first time.

Some Ferns a Pest.

Two kinds of ferns have become serious weed pests in the United States-namely, the hay-scented fern and the brake. It has been found that cutting off the tops close to the soil surface twice a year for two years will kill out nearly all of the ferns.

Easy to Improve Tomato. It would not be easy to find a fruit that can be more rapidly improved by careful selection or run out more rapidly by careless handling than the to-
