

HELP FOR WORKING WOMEN

Some Have to Keep on Until They Almost Drop. How Mrs. Conley Got Help.

Here is a letter from a woman who had to work, but was too weak and suffered too much to continue. How she regained health:

Frankfort, Ky.—"I suffered so much with female weakness that I could not do my own work, had to hire it done. I heard so much about Lydia E. Pinkham's Vegetable Compound that I tried it. I took three bottles and I found it to be all you claim. Now I feel as well as ever I did and am able to do all my own work again. I recommend it to any woman suffering from female weakness. You may publish my letter if you wish."—Mrs. JAMES CONLEY, 516 St. Clair St., Frankfort, Ky.

No woman suffering from any form of female troubles should lose hope until she has given Lydia E. Pinkham's Vegetable Compound a fair trial.

This famous remedy, the medicinal ingredients of which are derived from native roots and herbs, has for forty years proved to be a most valuable tonic and invigorator of the female organism.

All women are invited to write to the Lydia E. Pinkham Medicine Co., Lynn, Mass., for special advice—it will be confidential.

The Traditional Wager.

"I'm glad my wife is in politics," remarked Mr. Growcher.

"Why?"

"Maybe she will get rid of some of those freak hats she has been buying by paying them out in election bets."

BAD COMPLEXION MADE GOOD

When All Else Fails, by Cuticura Soap and Ointment. Trial Free.

If you are troubled with pimples, blackheads, redness, roughness, itching and burning, which disfigure your complexion and skin, Cuticura Soap and Ointment will do much to help you. The Soap to cleanse and purify, the Ointment to soothe and heal.

Free sample each by mail with Book. Address postcard, Cuticura, Dept. L, Boston. Sold everywhere.—Adv.

No Light Matter.

Both Germany and Russia are having serious difficulties in getting enough matches "to go around." Germany lacks the proper kind of wood, which formerly was imported from Russia. The czar's country, on the other hand, is in want of the necessary chemicals for match-making, which the Russians used to get from Germany.

Dr. Peery's "DEAD SHOT" is an effective medicine for Worms or Tapeworm in adults or children. One dose is sufficient and no supplemental purge necessary.—Adv.

The Locality.

"Where is the principal fighting?" "I think it is Soume-where in France."

Nerves All On Edge?

Just as nerve wear is a cause of kidney weakness, so is kidney trouble a cause of nervousness. Anyone who has back ache, nervousness, "blues," headaches, dizzy spells, urinary ills and a tired, worn feeling, would do well to try Doan's Kidney Pills. This safe, reliable remedy is recommended by thousands who have had relief from just such troubles.

A Virginia Case

Mrs. G. W. Davis, 107 Prince St., Alexandria, Va., says: "Doctors treated me for a long time and pronounced my condition serious. Often I felt so listless and nervous that I almost gave up hope and I endured torture from kidney ailments. Finally, I used Doan's Kidney Pills and they brought me relief after everything else had failed. I still take them occasionally and am always benefited right away."

Get Doan's at Any Store, 50c a Box DOAN'S KIDNEY PILLS FOSTER-MILBURN CO., BUFFALO, N. Y.

The Army of Constipation

Is Growing Smaller Every Day. CARTER'S LITTLE LIVER PILLS are responsible—they not only give relief—they permanently cure Constipation. Millions use them for Biliousness, Indigestion, Sick Headache, Sallow Skin.

SMALL PILL, SMALL DOSE, SMALL PRICE. Genuine must bear Signature.

Small Pill, Small Dose, Small Price. Genuine must bear Signature.

USES FOR SKIM MILK

One of Best Feeds for Both Young and Old Chickens.

Also Considered Excellent for Pigs of All Ages—Valuable in Itself and Assist in Digesting the Other Foods.

Milk is one of the best foods for both young and old chickens. The casein, or curdy part of the milk, largely supplies the protein necessary for laying hens, while for table fowl there is nothing superior to milk for making white, juicy, delicious flesh.

The milk may be either sour or sweet, and may be given as a drink or mixed with the meal, or both. Sour skim milk or buttermilk fed to chickens confined to limited range keeps them in health. The acid of the milk supplies the lack of vegetable acid they would obtain if running at large, and moreover it aids digestion.

Poultry farmers living near a creamery gladly pay for the skim and sour milk, which can be had at very reasonable rates.

Farm Dairying says: "Skim milk is considered one of the best of foods for pigs of all ages. It is not only valuable in itself, but it helps to digest other foods and so makes them more valuable. Milk makes a firm, excellent quality of pork."

"About a gallon and a half a day for a 100-pound pig will bring economical results, or feeding at the ratio of three pounds of milk to one of meal."

Mixed milk and wheat bran make the best ration for pigs and shoats in connection with clover and grass pasture.

All animals like a variety of food. No one food, however good it may be, will answer. Give a variety and only what will be eaten with a relish. Keep the feed troughs and feeding yards clean and dry.

No rancid food should be fed. Hotel refuse is not a healthy food.

RAT-PROOF CORN CRIB PLAN

Structure Will Aid Both in Drying of Crop and Protecting it From Rats and Mice.

The rural engineer bureau of the department of agriculture will be glad to tell you all about this crib that will aid both in the drying of corn and in protecting it from rats and mice. It is really a sort of double crib, separated by a driveway 12 feet wide and covered by a gable roof. The two cribs are each 8 by 32 feet and hold a thousand bushels apiece. As planned by the government engineers the concrete foundation is put in for all the walls. Complete plans may be had from the office of Public Roads and Rural Engineering, Department of Agriculture, Washington, D. C.

Rat-Proof Crib.

ered by a gable roof. The two cribs are each 8 by 32 feet and hold a thousand bushels apiece. As planned by the government engineers the concrete foundation is put in for all the walls. GOOD WAY TO MEASURE HAY

Four Hundred Cubic Feet Has Been Found to Be Fair Estimate for Ton—Weight Will Vary.

Sometimes hay is sold in the mow or the stack. When this is done it is necessary to estimate it.

It has been found that 400 cubic feet of hay will be a fair estimate for a ton. The actual weight of 400 cubic feet of hay, of course, will vary, as will the kind of hay, time of cutting, position of the mow, etc. But it will be a fair estimate to both buyer and seller to consider 400 cubic feet a ton.

When you are making an estimate multiply together the length, breadth and height of the mow or stack in feet and divide the product by 400. The quotient will be the number of tons.

FARM OF RIGHT PROPORTIONS

Records Show That Farmer Either Has Too Many Acres or Not Enough for Successful Work.

The size of business often has much to do toward making the farm profitable. Farm management records show that farms are often either too small or too large for the most successful farming.

There may be too few as well as too many acres. A man may not have enough land or he may be "land poor," thereby rendering all his acres unprofitable.

LATE FALL PLOWING EASIER

Cool and Stimulating Weather Makes Work Less Difficult for Horses—Keeps Them Strong.

Late fall plowing is much easier on the team than early spring plowing, as the weather is cooler and stimulating, and they can stand the work much better than they can next May. Besides, the work will keep their muscles and vital organs stronger and more vigorous, so that they will not become fatigued at the advent of warmer weather.

LIVE STOCK AIDS FERTILITY

Diversified Farming Calls for System of Rotation and Is Best Insurance of an Income.

On farms where live stock is kept the land is more productive than on farms where exclusive grain farming is followed. Where the crops are sold on the market all of the plant food contained in those crops is lost to the soil. This practice will result without fail in impoverishment of the land.

Live-stock farming is diversified farming and calls for a system of crop rotation. It returns fertility to the soil. Adds interest to the work of the people living on the farms and finally is the best insurance of an income.

Splendid Beef Type.

Every farmer should make a business of growing his own beef and pork as well as his own vegetables. He should grow his own protein feed for his stock, and stop buying bran, cottonseed meal and other high-priced protein feeds.

SWEET CLOVER FOR PASTURE

Some Farmers Regard Plant as Weed and Practically Worthless—Improves Tith of Soil.

The value of sweet clover as a pasture or hay crop is much disputed. Some farmers regard it as practically worthless and consider it a weed, while others apparently have had good success with feeding it. Its foliage has a bitter taste due to the cumarin it contains and its stems have a tendency to become woody as they mature. If not allowed to become too rank before pasturing, or if cut for hay before the first bloom buds appear, these two objectionable features may be avoided to a considerable extent and very good food obtained.

Since it is a biennial, sweet clover may take the place of red clover in the rotation on those lands where the latter does not thrive well, but on the best lands it cannot compete with either red clover or alfalfa for hay.

It is efficient as a soil renovator, by reason of the large amount of nitrogen it is able to take from the air as well as the humus added to the soil when it is turned under or from the decay of roots when the crop is harvested.

ADDITIONAL SPACE FOR HAY

Temporary Shelter May Be Obtained by Placing Prepared Roofing Materials on Poles.

When the rains make hay harvest so unfavorable, as was the case in 1915, it is important to provide suitable roofs under which the hay may be placed as rapidly as it can be cured sufficiently. While the substantial barn is always first to receive consideration it frequently happens that more or less additional storage is desirable.

In many cases this additional space for hay may be provided at small expense by planting telegraph poles suitable distances apart, connecting these with plates made of plank and on these plates placing roof materials. Such a structure may be built in short order and at small expense. Farm laborers may even do the building.

If a more durable and larger structure is desirable there is nothing superior to the plank frame hay racks.

NEGLECT OF FARM MACHINES

Some Cultivators and Hay Racks Are Never Greased—Keep All Wagon Axles Well Oiled.

The oiling or greasing of no machinery on the farm is so neglected as are the axles of wagons, buggies, rakes, cultivators, etc. An oil can or box of axle grease is not carried along with these vehicles or implements, and because oiling is not needed every few hours, this is neglected.

Some cultivators and hay racks are practically never oiled or greased, when this should be attended to after a steady day or two of service or the equivalent. Nothing but close attention to wagon and buggy will keep the axles well oiled, as the trips of a few miles each day soon accumulate and get rid of all of the grease.

SEVERAL RATES OF SEEDING

Ohio Experiment Station Finds Great Yield of Grain Secured From Eight Pecks to Acre.

Experiments conducted by the Ohio experiment station during 17 years and including eight different rates of seeding with ten varieties of wheat show that eight pecks to the acre gives the greatest net yield of grain. Figures given in the station's bulletin point in general to a gradual increase in yield from the use of three pecks to nine pecks per acre, but seeding more than eight pecks to the acre has not paid for the extra seed.

THE MARKETS

NEW YORK.—Wheat—Spot irregular; No. 1 Durum, \$1.97 1/2; No. 2 hard, \$1.84 1/2; new No. 1 Northern Duluth, \$1.96 1/2; and new No. 1 Northern Manitoba, \$1.91 1/2 f o b New York. Corn—No. 2 yellow, \$1.08 c f New York.
