'Penn State' Graduate Makes Invention. To Capt. Wallace L. Clay, a Pennsylvanian, and a graduate of Pennsylvania State College, class of 1909, belongs credit for the invention of what is probably the most effective rifle bullet in the world. Capt. Clay is now stationed at the Frankford Arsenal. He is only twenty-eight years old.

Resembling the regulation army bullet, the projectile is made of a cylinder of steel incased in lead. The lead, melting from friction, acts as a lubricant when the bullet strikes the object fired at and intensifies penetration. Army officers who witnessed the demonstration declare the bullet could strike down twenty men standing in a row.

Ordnance officers and engineers witnessed the test at the Sandy Hook Proving Grounds last week. Expert marksmen fired the bullets from a distance of fifty yards at a sheet of armor plate, three-quarters of an inch thick, behind which had been arranged a silhouette target. The bullets after they had pierced the target were found almost intact, only the lead casing being ripped from their noses.
