Little Talks on Health and Hygiene by Samuel G. Dixon, M. D., LL. D., D.Sc., Commissioner of Health.

Food makes the sinew of war. During the activities of a war such as the world is now experiencing, millions of men and women are engaged in manufacturing munitions for every requisite of warfare, both on land and water. Food supplies are the very sinews of war, therefore, the guarding of meat, milk, vegetables and grain becomes one of our imperative measures of defence. These essentials will have to be looked after to supply those active at the front and those guarding the great treasure of our Republic. Unfortunately, at the present maybe more than ever before in the history of the world, our people are restless and demand to be entertained. They do not today, as much as in former times, make their daily occupations their play. For this reason they flock to the center of population to be amused by various forms of entertainment. This robs the farms and gardens of the country, which we can ill afford to lose at such a time as this. With these conditions staring us in the face, our attention is turned to a serious condition which threatens a nation that may be long engaged in active warfare. No one can guess the length of time the United States of America will be involved in protecting herself from foreign interference with her national rights. Today, therefore, is the time to begin to economize in the use of foodstuff, the waste of which is a sin. Gardening and farming furnish health and profitable activities for women. If many idle women, and those who engage in sports of various kinds simply to pass away the time, should become active and spend their time in some useful occupation, such as gardening, it might be more profitable to them physically, mentally and morally, and of inestimable value to their country. Those who live in our homes can contribute something to the strength of the nation by better maintaining our health and adding to the food supply. A little spade, rake, hoe, and weeder will furnish us with all the tools necessary to cultivate vegetables in our yards, or on the roof of our flat. If we have front or back yards, we can raise tomatoes, peas, corn, carrots, parsnip, cucumber, egg plant, onions, leeks, lettuce, radishes or squash. Our war has been declared just at the season for men and women to start their gardens. With intensive gardening, even those who have never given the subject any thought, will be surprised to find how much a small plot of ground will produce.

Declare War on the Fly—Now.

Kill at once every fly you can find and burn his body. Observers say that there are many reasons to believe there will be more flies this season than for a number of years. The killing of just one fly NOW means there will be billions and trillions less next summer. Clean up your own premises; see and insist that your neighbors do likewise. Especially clean "out-of-the-way" places, and every nook and cranny. Flies will not go where there is nothing to eat, and their principal diet is too filthy to mention. The United States Government makes the following suggestion for the destruction of horse flies: Formaldehyde and sodium salicylate are the two best fly poisons. Both are superior to arsenic. They have their advantages for household use. They are not a poison to children; they are convenient to handle, their dilutions are simple and they attract the flies.
