

**To Drive Out Malaria**  
**And Build Up The System**  
 Take the Old Standard GROVE'S TASTELESS chill TONIC. You know what you are taking, as the formula is printed on every label, showing it is Quinine and Iron in a tasteless form. The Quinine drives out malaria, the Iron builds up the system. 50 cents.

Medicine is occasionally necessary to help the system, recover its normal functions. That is especially true in Spring. Wright's Indian Vegetable Pills are an ideal medicine. They combine tonic and laxative properties. Adv.

When aspiration is transmuted into perspiration it begins to be effective.

**What is Castoria**

CASTORIA is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrup. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-Good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment. Genuine Castoria always bears the signature of *Chas. H. Fletcher*

**W. L. DOUGLAS**

"THE SHOE THAT HOLDS ITS SHAPE"  
**\$3 \$3.50 \$4 \$4.50 \$5 \$6 \$7 & \$8** FOR MEN AND WOMEN  
 Save Money by Wearing W. L. Douglas shoes. For sale by over 9000 shoe dealers. The Best Known Shoes in the World.

W. L. Douglas name and the retail price is stamped on the bottom of all shoes at the factory. The value is guaranteed and the wearer protected against high prices for inferior shoes. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York. They are always worth the price paid for them.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the Fashion Centres of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy.

Ask your shoe dealer for W. L. Douglas shoes. If he cannot supply you with the kind you want, take no other make. Write for interesting booklet explaining how to get shoes of the highest standard of quality for the price, by return mail, postage free.

**Not Bear Like.**  
 "He's very nice to his wife when they are out in company, but at home he acts like a bear."  
 "Oh, no, he doesn't. She says he never hugs her."

**FIERY RED PIMPLES**

That Itch and Burn Are Usually Eczematous—Cuticura Quickly Heals.

It needs but a single hot bath with Cuticura Soap followed by a gentle application of Cuticura Ointment to the most distressing, disfiguring eczemas, itchings and burnings to prove their wonderful properties. They are also ideal for every-day toilet use.

Free sample each by mail with Book. Address postcard, Cuticura, Dept. 1, Boston. Sold everywhere.—Adv.

If some people were to speak their minds it wouldn't take them long.

**A Long Reach.**  
 "I thought I put that vase out of baby's reach."  
 "Well, he yelled for it," explained dad. "What his arms won't reach his lungs will."

It is hard if people do not fully appreciate you, but it is worse if your undershirt sleeve keeps pulling up.

Cheer up if you find that you are not a genius. A scientist says that genius is a sort of epilepsy.

Love is the trancelike of life that helps to make palatable the rest of the meal.

**DESTROY MANY PESTS**

**Horned Larks Range Over Practically Whole Country.**

**Birds Are Particularly Fond of Weed Seeds—Insect Food Includes May Beetles, White Grubs and Grasshoppers.**

(By W. L. M'ATEE)

Horned larks are small but hardy birds which frequent the open country and never live in forests. They range over practically the whole United States, and are easily recognized by the conspicuous black mark across the breast and the small pointed tufts of dark-colored feathers behind the eyes. These are often erected and cause the appearance referred to in the common name. These birds nest early, often before all the snow has disappeared, and they have a joyous flight song in the mating season.

The food of horned larks consists of 20.6 per cent of animal and 79.4 per cent of vegetable matter. Not quite a sixth of the vegetable food is grain, mostly waste, though some sprouting grain is pulled. This is the most serious charge against the birds and is sustained, but it must be admitted that practically all the complaints were

Horned Larks.

made years ago, when broadcast sowing was the rule. Recent correspondence shows that drilled grain is practically free from injury.

Weed seeds are by far the largest single component (63.9 per cent) of the food of horned larks, and over 10 per cent of the 1,154 birds examined had eaten them, no fewer than 293 individuals having fed on them, exclusively. Conspicuous among the weed seeds eaten are those of the foxtail grasses, smartweeds, bindweeds, amaranth, pigweeds, purslane, ragweed and crab and barn grasses. Horned larks are among the most efficient weed-destroying birds.

The insect food of these birds includes such pests as May beetles and their larvae, the white grubs, leaf beetles injurious to strawberries, cabbage, melons and sugar beets, clover-leaf and clover-root weevils, potato-stalk borers, nut weevils, bill bugs and the chinch bug. Grasshoppers are a favorite food; cutworms are eaten freely.

**PLOW IN PROPER CONDITION**

Something Wrong When Farmer Must Bear Down or Lift Up Handles—Study Is Necessary.

A plow in proper condition runs smoothly and at an even depth, with very little effort on the part of the plowman. When a plow does not run smoothly, when the plowman must bear down or lift up on the handles, or must constantly hold the plow either one way or the other to keep it from tipping over, something is wrong with it. The point tips down or up too much, or the cutting edge of the share is dull or slants down or up too much. A good plowman must know how a good plow should work and when it does not go right should know what is wrong with it. To know these things requires as much thought and study and mental and mechanical ability as to understand a telephone or a telegraph instrument.

**ENCOURAGE GRASS TO GROW**

Where Pasture Lands Cannot Readily Be Plowed Application of Lime Is Recommended.

In pasture lands that cannot readily be plowed the best procedure is to apply lime, if needed, and to encourage the grass to grow vigorously by a yearly top dressing of well-rotted barn-yard manure and occasional light applications of commercial fertilizer that is rich in phosphates and nitrogen. In addition, all thin spots in the sod should be reseeded each year with a liberal quantity of good grass seed.

**FUNGUS ON CURRANT BUSHES**

Declared to Be Bad Neighbors for White Pine Trees—Cause of Injurious Blister Rust.

Currant bushes are very bad neighbors for white pine trees, as the currant bush may act as host for the fungus which causes white pine blister rust.

This disease can be spread by nursery stock of white pine, and those who wish to protect their pine trees should not plant currants near them.

**WHITENESS MIXTURE**

If your poultry house, stable or hog barn is infested with insects and you want to have clean, fresh, attractive interiors in your buildings, try the following mixture: Shake five quarts of lime with hot water to the consistency of cream. To this add one pint of kerosene or a coal tar product, and one pint of kerosene. Dilute until it can be applied with a brush or spray pump. The coal tar product kills disease germs, the kerosene destroys mites and the lime whitens the walls.

**HEN MANURE IMPROVES SOIL**

Droppings Should Be Collected Daily and Mixed with Substances to Preserve Nitrogen.

According to the Maine station, the droppings should be collected daily and mixed with substances which will (1) prevent loss of nitrogen, (2) add sufficient potash and phosphoric acid to make a better balanced fertilizer, and (3) improve the mechanical condition of the manure so that it can be applied to the land with a manure spreader.

This can be done as follows: To each 30 pounds of the manure add ten pounds of sawdust, good dried loam, or peat, 16 pounds of acid phosphate, eight pounds of kainit. Such a mixture will contain about 1.25 per cent of nitrogen, 4.5 per cent of phosphoric acid, and 2 per cent of potash, which, used at the rate of two tons per acre would furnish 50 pounds of nitrogen, 185 pounds of phosphoric acid, and 80 pounds of potash, and at the present price of fertilizing ingredients is worth about \$10 per ton. The mixture would furnish a well-balanced stable fertilizer, which, although not fine enough to work well in drills, can be successfully applied with a manure spreader. The treated manure should be well sheltered until time to apply to the land—that is shortly before plowing.

**CONSTRUCTING A FARM GATE**

Directions Given for Making Durable and Cheap Barrier—Convenient and Easily Made.

(By BURDINE WEBB)

Take board strips, one inch thick, three inches broad, and the proper length and width you want your gate, nail them across each other, making about three-inch cracks.

Then take the same size and width pieces and double the crosses, nailing securely. A half pound of No. 8 nails will do the work.

Use ordinary light hinges. I use seven crosspieces, and then by doubling these, which is absolutely neces-

Economical Gate.

sary, you will have to use 14, with four pieces lengthwise, making a total of 18 pieces, a cheap and durable and economical gate.

In making the latch use any of several convenient methods.

**PROPER WATERING OF HORSE**

Expert of North Dakota Experiment Station Suggests Water Be Given Before Feed.

The proper watering of the horse is important. Mr. Peters of the North Dakota experiment station makes the following suggestions. A horse that is thirsty should be watered before being fed hay or grain, rather than after. The reason for this is that the stomach of the horse is comparatively small, and if he eats a heavy feed of grain or hay or both, and then drinks a large quantity of water, a portion of the feed will be washed from the stomach into the intestines before it has been sufficiently acted upon by the digestive fluids of the stomach, and colic is likely to develop. The regular practice should be to water before feeding.

**SOME SEEDS CARRY DISEASE**

Development of Resistant Varieties and Disinfection Is Favored as Best Preventive.

Several wilts and blights which attack ordinary vegetables are carried from year to year on the seed. The most common of these are celery blight and some of the cabbage rots.

The best preventive in either case is a development of resistant varieties and also a disinfection of the seed to prevent carrying the disease to new ground.

**WRIGLEY'S**

Made by machinery—filtered—safe-guarded in every process:

Factories inspected by pure food experts and highly praised:

Contented employes, of whom perfection is the pride:

Such is WRIGLEY'S—the largest selling gum in the world.

Helps appetite and digestion. Keeps teeth clean—breath sweet.

**The Flavor Lasts**

**His Chinese Was Bad.**  
 Charles B. Towns, the anti-drug champion, spent some time in China several years ago with Samuel Merwin, the writer. In a Hongkong shop window they noticed some Chinese house coats of particularly striking designs and stepped in to purchase them. Mr. Towns asked Mr. Merwin to do the bargaining.

**Safe Deduction.**  
 Simson—I wonder where the stepladder is?  
 Mrs. S.—Willie had it last.  
 Simson—Then it must be in the pantry.

"Wantum otee," said Mr. Merwin to the sleepy-eyed Oriental who shuffled up with a grunt. He placed several of the coats before them.  
 "How much does Melican monee?" inquired Mr. Merwin.  
 "It would aid me in transacting this sale," said the Chinaman. "If you would confine your language to your mother tongue. The coat is seven dollars."  
 Mr. Merwin took it.

**A Sure Sign.**  
 "Is he doing his bit for his country?"  
 "I guess so. He came over and borrowed my garden tools."

**This Car Is Worthy of Your Confidence**

You can buy a Saxon car secure in the knowledge that you are getting full value in tried and proven motor car mechanism.

Saxon cars are built to win the confidence of their owner—and they do. But first they must win the confidence of their builders—and this they could not if they embodied any feature or any part of unproved worth.

So no Saxon principle of construction has ever been changed until a better principle has fully proved its greater value. And so no Saxon car has ever embodied features of doubtful worth.

Saxon cars have simply been in a state of transition, passing thru phase after phase of gradual improvement without a break in production. They are refined from time to time, not radically changed.

They are in the fullest sense of the phrase, products of evolution. They are developed rather than built.

Isn't that the kind of a car you want—one that you can feel confident is right before you put down your good money for it? If it is, then you want a Saxon.

There is still some good territory open for Saxon Dealers. For information you should apply to
