New Compact Fire Escape. One of the boys aboard our navy's fleet has invented a fire escape which is similar to the rope ladders used aboard ships. His principal object was to provide a collapsible fire escape which could be compacted and conveniently arranged at the window of a dwelling. It consists of a container hinged to the sill in such a manner that by opening the window and folding the container on its hinges the metal ladder may be unfolded and dropped. When this operation is gone through, a means is automatically provided whereby the ladder is held at a distance from the walls of the building. The advantage of such precaution is obvious.
