

LOOK AT CHILD'S TONGUE IF SICK, CROSS, FEVERISH

HURRY, MOTHER! REMOVE POISONS FROM LITTLE STOMACH, LIVER, BOWELS.

GIVE CALIFORNIA SYRUP OF FIGS AT ONCE IF BILIOUS OR CONSTIPATED.

Look at the tongue, mother! If coated, it is a sure sign that your little one's stomach, liver and bowels need a gentle, thorough cleansing at once.

When peevish, cross, listless, pale, doesn't sleep, doesn't eat or act naturally, or is feverish, stomach sour, breath bad; has stomach-ache, sore throat, diarrhea, full of cold, give a teaspoonful of "California Syrup of Figs," and in a few hours all the foul, constipated waste, undigested food and sour bile gently moves out of the little bowels without griping, and you have a well, playful child again.

You needn't coax sick children to take this harmless "fruit laxative;" they love its delicious taste, and it always makes them feel splendid.

Ask your druggist for a bottle of "California Syrup of Figs," which has directions for babies, children of all ages and for grown-ups plainly on the bottle. Beware of counterfeits sold here. To be sure you get the genuine, ask to see that it is made by the "California Fig Syrup Company." Refuse any other kind with contempt.—Adv.

Polite Phraseology.

Miss Oldbury, who prides herself upon her correctness in the framing of ordinary sentences, was industriously plying her knitting needles when she was accosted by her friend, Miss Harkins, who said: "You are very busy, Clementina." "Yes," replied Miss Oldbury, "I have a cousin in the army who is a very tall man. This sweater is for him, and, although I have been knitting it for two weeks, I am afraid three weeks more must elapse before it is ready for occupancy!"

According to government figures, California last year produced more than half the beans in the United States.

The tightwad usually has money at the finish, but very little else.

Cure pimples, headache, bad breath by taking May Apple. Also, Jalap, rolled into a tiny sugar pill called Doctor Pierce's Pleasant Pellets. Adv.

The man who does the least talking often has the most to say.

Back Lame and Achy?

There's little peace when your kidneys are weak and while at first there may be nothing more serious than dull backache, sharp, stabbing pains, headache, dizzy spells and kidney irregularities, you must act quickly to avoid the more serious trouble, dropsy, gravel, heart disease, Bright's disease. Use Doan's Kidney Pills, the remedy that is so warmly recommended everywhere by grateful users.

A Maryland Case

W. E. Phillips, III, Academy St., Cambridge, Md., says: "I had pains in my back and often in the morning after I got up, I couldn't raise my hands above my head. My back was stiff and lame and after stooping it was all I could do to straighten. I finally began using Doan's Kidney Pills and found relief. I am glad to say that I have had no return of the trouble."

SHEEP EXHIBITS AT COUNTY FAIR

Extension Worker Makes Educational Display, Attracting Much Interest.

IMPROVED METHODS SHOWN

Beginners Shown Advantages of Using Western Ewes as Foundation Stock—Farmers Realize Value of Pure-Bred Sire.

(Prepared by the United States Department of Agriculture.)

That the county fair is a fertile field for carrying on extension work has been demonstrated in the upper peninsula of Michigan by Duncan L. McMillan, extension specialist in sheep husbandry of the United States department of agriculture, co-operating with the Michigan College of Agriculture. During the recent county fair season Mr. McMillan displayed a novel sheep exhibit, prepared strictly on educational lines, at five local fairs. The object of the display was to demonstrate improved methods in handling and breeding sheep to farmers already in the business, and to stimulate and assist others in getting started properly. It illustrated to beginners the advisability of using western ewes as foundation stock and crossing them with pure-bred rams of the black-faced breeds to build and grade up flocks.

Make-Up of Exhibit.

The exhibit was made up of several pens of sheep, including one of western ewes brought in from the range this year, and others of first, second and third crosses of western ewes and pure-bred rams. One pen of Angora goats was used to demonstrate their brush-clearing ability by placing quantities of brush in such fashion as to make the goats climb for it. Milk goats were also included in the exhibit. The sheep in the exhibit were used for special judging demonstrations and in illustrating the more important points to be considered in selecting breeding stock and culling the flock. Visitors showed keen interest and took advantage of the opportunity to ask questions, which kept the exten-

Besides Supplying Wool and Mutton, Sheep Are Excellent Weed Destroyers.

Extension men in charge of the exhibit busy explaining various phases of the sheep business.

Important Things Accomplished. On the whole, the most important things accomplished seem to be that farmers came to realize the value of the pure-bred sire. Also, they learned to appreciate western ewes as foundation stock and to recognize the error of using the open, coarse-wooled breeds of sheep for this purpose.

AIM FOR BETTER SEED CORN

County Agents Have Directed Considerable Effort in Selection and Testing Campaigns.

(Prepared by the United States Department of Agriculture.)

Realizing the importance of good seed corn as an essential in increasing production, and knowing that fall-selected seed corn is best, county agents have directed considerable effort in seed-corn selection and testing campaigns. Three hundred and fifty-four agents assisted 63,813 farmers last year in the 33 Northern and Western states in fall-selecting seed corn, and more than a million additional acres were planted with fall-selected corn resulting from work of the agents during the previous fall. Assistance was given to 36,538 farmers in the testing of seed corn, resulting in 946,563 additional acres being planted with tested seed. The agents conducted extension campaigns to encourage seed corn selection in the fall and seed-corn testing in Illinois, Indiana, Iowa, Michigan and Pennsylvania.

CULTIVATE TO KILL WEEDS

Necessary Moisture and Plant Food Utilized at Expense of Important Food Crops.

Cultivation—stirring the soil—kills weeds, which draw moisture and plant food at the expense of the crops, and incorporates air, a necessity, into the soil. A clod of earth locks up plant food and prevents its utilization by the plant.

FERTILIZER FACTS

Each ton of manure applied will produce from \$4 to \$9 worth of crops.

Each limed acre of acid soil will produce from \$5 to \$15 increase in crops.

Grain crops are worth from \$15 to \$25 per acre if planted on soil that grew a legume the previous year.

Sixty-five per cent of all farm land needs lime and phosphorus which are sold in several forms.

CLUB BOY IS MAKING BROOMS

Alabama County Agent Relates Commendable Spirit Exhibited by Southern Youth.

(Prepared by the United States Department of Agriculture.)

Bale of Broom Corn.

Aspiration for education beyond that obtainable in the elementary schools. An example of this commendable spirit comes to the states relation service in a recent field report from Alabama. "One of my boys," writes the agent in Center, a town in Cherokee county, "has made 102 brooms from his corn. He has sold 60 at \$1 each and has 200 more to make. The proceeds he will devote to his education along more advanced lines."

TREATMENT OF HOG DISEASES

Ailing Animals Should Be Immediately Isolated in Clean Quarters—Disinfect Pens.

(Prepared by the United States Department of Agriculture.)

As soon as sickness appears in the herd the unaffected hogs should at once be removed to clean, disinfected quarters, preferably without much range, for by running over pastures they may come in contact with contagion. Their feed should be carefully regulated and, if they have previously been on pasture, should include some green feed, roots, or an abundance of skim milk.

The quarters in which the sickness first appeared should be thoroughly cleaned, all bedding and rubbish burned, and loose boards and old partitions torn out and burned. If the pen is old, knock it to pieces and burn it. Disinfect pens and sleeping places, using alkaline lime on the floors and the carbolic-acid solution on the walls and ceilings. Whitewash everything. If a hog dies from any cause the carcass should never be exposed where it may be devoured by the other hogs or by passing birds or beasts, but should be buried at once or buried deeply and the pens thoroughly disinfected immediately. If possible, do not move the carcass from the place where it falls; but if necessary to do so the ground over which it is dragged should be disinfected. It is not known positively how long the virus of hog cholera may survive in the soil, but under favorable conditions it is not unlikely that it may live in the ground for several months. Care should be taken to maintain a strict quarantine between the sick and healthy hogs. The same attendant should not care for both lots unless he disinfects himself thoroughly after each visit to the infected hogs. Dogs should be confined until the disease is stamped out.

The treatment of hogs suffering from cholera is not satisfactory after the disease has become well established in a herd. The prevention of an outbreak by the use of antihog-cholera vaccination should be relied upon rather than the cure of sick animals.

MANURE OF BENEFIT TO CORN

Average Increase of 10.4 Bushels Per Acre Secured During First Year of Application.

The results of a large number of tests conducted by the University of Missouri College of Agriculture show that manure applied to corn land under Missouri conditions at the rate of eight loads per acre has given an average increase of 10.4 bushels during the first season following its application. At the present price of farm products this should be sufficient reason for making a special effort to save every ton of manure produced on the farm, and to see that it is returned to the field before the corn crop is planted.

SEE CANADA LANDS

Inspection of Choice Farm Acres Will Be Profitable.

Cost Only a Trifle Compared to Possible Benefit to Be Derived—"Ye Happy Fields, Unknown to Noise and Strife, The Kind Rewarders of Industrial Life"—John Gay.

There are thousands today looking for farms to buy, and with the hundreds of thousands of acres offered for sale, there is no lack of opportunities. But there are all classes of lands, good, bad, and indifferent, much of each. The government of the Dominion of Canada has no land for sale, but within the boundaries of the Dominion there are unlimited acres of choice land owned by railway and land companies and private individuals. It holds no brief for any, nor are any of them clients. But it is to the interest of the Dominion to have the hundreds of thousands of acres placed under cultivation, for every acre thus cultivated adds to the revenue which helps pay the government of the country. It is with the purpose of setting forth the agricultural advantages that Canada, especially Western Canada, possesses, that attention is drawn to the fact. The purpose is to place before the reader truthful statements, and advise the prospective settler as to the necessity to investigate and inspect, leaving to his own deduction the matter of his selection. Once he decides, the government will render him any further information necessary as to location, prices and value of land, and assist him in every way possible to become settled.

The cost of a trip to Western Canada, to any portion of the three provinces—Manitoba, Saskatchewan and Alberta—specially indicated in this work, is but a trifle compared with the benefits that a personal inspection may give. Therefore the advice is to do so. Low rates on railways will be arranged and every opportunity afforded for giving the country a thorough and careful examination. It may be that you wish an improved farm, all ready for occupation and cultivation; you may want raw prairie, which only requires plowing and the other preparation necessary for a seed bed, leaving it to yourself to erect your buildings, sink your well, prepare your garden, and ascertain how close you are to school, church, town and market. You may wish to go into mixed farming, combining the raising of stock with the growing of grain. In this case you will look out for some shelter from sun, wind and storm, and want a farm portion of which may be cultivated for grain, and pasture fields connected with it. You may make this out of the open level prairie, but you will do better to secure a partially wooded lot, where water and pasture are already at hand. You may wish to go into the raising of cattle, or sheep alone; then you will care less for the open prairie, but select something that may cost you less in the more northerly districts. No matter what you may want, unless it be land upon which to grow cotton, bananas or other tropical or semi-tropical products, your inspection trip will reveal to you that Western Canada possesses possibilities beyond which any literature you may read advises you.—Advertisement.

Swift & Company's 1918 Earnings

How They Affected You

During the twelve months ended Nov. 2, 1918 (its fiscal year), Swift & Company transacted the largest volume of business on the smallest margin of profit in its history.

Profits of the meat business—under regulations of the United States Food Administration—were limited to a maximum of 9 per cent on capital employed but not to exceed 2½ cents per dollar of sales.

Swift & Company in the regulated departments earned 7.57 per cent on capital employed and 2.04 cents per dollar of sales, out of which had to be paid interest on borrowed money and taxes. Here is how these earnings affect you.

Live-Stock Raiser—

Swift & Company killed 14,948,000 head of livestock, which weighed alive, 4,971,500,000 pounds.

Swift & Company made a profit of only a fraction of a cent per pound liveweight.

Consumer—

The sales of our meat departments were 4,012,579,000 pounds on which our earnings were less than ½ cent per pound.

The per capita consumption of meat in the United States is given as 170 pounds. If a consumer purchased only Swift & Company's products he would contribute only about 78 cents a year, or 1½ cents a week as profit to the company.

Swift & Company, U.S.A.

Our Scientifically Developed Orange and Grape Fruit Groves at

LAKE ALFRED, FLORIDA

Provide a Safe and Profitable Investment and a Beautiful Home Amid Picturesque Surroundings and Among Charming People

We have never resorted to extravagant or misleading claims in advertising. We do not indulge in adroit maneuvers, insistent urgings, nor will we make a sale until you have seen the property or given authority to someone in whose judgment and integrity you have faith.

We believe our splendid groves, young or in bearing, with our scientific and systematic care through our COMMUNITY SERVICE, and located in the justly famous PROVEN AREA of the Lake Alfred-Florence Villa-Winter Haven District, are the best in the State. Hence our advertising is a plain statement of facts.

Prices are fair and depend on age of trees. Terms, one-fourth cash, balance 3 or 4 years at 6%. Groves in 6th to 8th year pay \$200 to \$500 per acre net.

Our only "urge" is that you take a pleasant trip to the beautiful HIGHLAND LAKES section of Polk County, Florida, make your own observations and comparisons. You may count upon uniform courtesy and our extension of every opportunity for you to learn the facts. Conditions guaranteed as represented and we pay R. R. fares if you buy.
