Budwig, the aviator who made Bellefonte his headquarters for some time and made several landings at Centre Hall, joined the aerial mail service of the U. S. government.

There is a wide-spread impression that the October weather this year was a record-breaker for high temperature and for wetness. The records of the Pennsylvania Agricultural Experiment Station weather observatory for the past October do not show that in the mountain region of central Pennsylvania the conditions were at all record-breaking, comparing both temperature and rain fall for a period of thirty-three years. During four years since 1886 the rain fall has either been as much or more than the October just past.

**Why has no other instrument been subjected to the TONE TEST?**

There are many devices for the reproduction of sound—more than ninety makes, it is said. Many are widely advertised. Why has but one been subjected to the Tone Test? The reason is clear. There is but one which can meet the Tone Test, and that is THE

**New Edison**  
"The Phonograph with a Soul"

The Tone Test is the supreme and searching test of an instrument's quality. It is a Tone Test, the artist stands beside the instrument in direct comparison with the New Edison's RE-CREATION of his voice. Occasionally the singer ceases while the instrument continues alone. Can you tell when the break occurs? That is the question. Can you distinguish the living voice from the RE-CREATED voice? More than two million people have sought to do so. Not one has succeeded.

More than 15% public Tone Tests have been conducted. Always the New Edison has emerged successful.

Come and satisfy yourself about the New Edison. We will gladly demonstrate it.
