Take "Cascarets" if sick. Bilious, Constipated.

Enjoy life! Straighten up! Your system is filled with liver and bowel poison which keeps your skin sallow, your stomach upset, your head dull and aching. Your meals are turning into poison and you cannot feel right. Don't stay bilious or constipated. Feel occasionally. They act without griping or inconvenience. They never sicken you like Calomel, Salts, Oil or nasty, harsh pills. They cost so little too-Cascarets work while you sleep .- Adv.

Britons Breed Rabbits for Fur. Rabbit breeding in Great Britain, to supply a portion of the large quantities of fur purchased in the country, is stated by a commerce report to be the purpose of the new Beveren club. The fur of the blue beveren is described as having a lovely shade of lavender blue throughout, and as being long, lustrous, exceedingly fine and silky: that of the Havana rabbit is a rich chocolate color and is thick and fairly long. From these varieties it is hoped to produce natural furs with a fine color that will not fade.

GREEN'S AUGUST FLOWER.

Constipation invites other troubles which come speedily unless quickly checked and overcome by Green's by local applications as they cannot reach the diseased portion of the ear. There is August Flower which is a gentle laxative, regulates digestion both in stomach and intestines, cleans and sweetens the stomach and alimentary canal, stimulates the liver to secrete the bile and impurities from the blood. It is a sovereign remedy used in many thousands of households all over the civilized world for more than half a century by those who have suffered with indigestion, nervous dyspepsia, sluggish liver, coming up of food, palpitation, constipation and other intestinal troubles. Sold by druggists and dealers everywhere. Try a bottle, take no substitute .-- Adv.

Berlin's Heating Plan.

The city of Berlin adopted in July a new plan for supplying some public buildings with heat and warm water. Exhaust steam from the Berlin electricity works will be used, in addition to coke heated bollers. Pipes are to streets, the pipe sections to be welded together. A number of tenement will have been completed in time.

Alaskan Petroleum.

The petroleum produced in Alaska is derived wholly from a single patented claim in the Katalla oil field, according to the United States geological survey, department of the interior. The old wells on this claim and the refinery were operated as usual in 1918. Two new productive wells were also drilled in the Katalla field. The a cemetery in Milwaukee. total production in 1918 was somewhat larger than in 1917.

Capital in British Fisheries.

The total capital invested in British fisheries is estimated at figures ranging from \$500,000,000 to \$1,000,000,000. A tremendous boom in fishing is regarded as certain, one authority estimating that the annual catch of 24,-000,000 hundredweight will increase in a few months to 40,000,000 hundredweight.

No Slope Steeper Than 15 Degrees Should Be Cleared for Best Cultivation.

TO PREVENT SERIOUS HARM

One of the Most Effective Methods of Thwarting Soll Washing Is by Terracing-Stops Washing Away of Land on Hillsides.

(Prepared by the United States Department of Agriculture.)

The farmer who contemplates clearing a wooded tract which is more or less uneven in character should make sure that, if cleared, it will not suffer from erosion. How steep a slope of wooded land can safely be cleared for farming depends largely on the character of the soll. It has often been said that no slope steeper than 15 degrees should be cleared and, as a general rule, this probably holds good. However, not infrequently slopes of less than 15 degrees show serious erosion under cultivation, while occasionshow no serious results. The ques tion, therefore, is one that must be settled for each locality, or even for

In Case of Doubt.

Usually the farmer who is in doubt can find in the vicinity a piece of cleared land similar in character to case of doubt, the safest course is to leave the land uncleared, according to planted. the forest service.

Some eroslon must be expected on all sloping land cleared for cultivation, but where the tract is really suitable for farming, however, the erosion can

Bad Erosion Results From Clearing Land of Too Steep Slope.

be reduced sufficiently to prevent serious harm. The general principle to branches. While this difference is not be kept in mind is to prevent surface run-off, as far as possible. Water that is absorbed by the soil not only causes no erosion but increases the supply of ground water, diminishes drought, feeds the streams and maintains a steady flow in adjoining streams.

Terracing Is Effective.

One of the most effective methods of preventing erosion on sloping cultivated land is terracing, a subject well worth special investigation by the farmer who wishes to till sloping tracts and at the same time keep the good soll on the upper areas from being washed down the hillsides.

VALUE OF WOOD-LOT TIMBER

Farmer Should Familiarize Himself With Products-Big Losses Can Be Prevented.

(Prepared by the United States Department of Agriculture.)

Lack of familiarity with the business of timber selling usually puts the owner of a small woodland at a disadvan tage, and in many regions material from the wood lot is sold considerably less than its real value. The loss to the farmers is, in the aggregate, very large. In order to stop this loss, it is necessary that the farmer informs himself about the different kinds of grades of wood-lot products, the methods of estimating and measuring them and ascertaining their value, the methods of selling, the markets, and the current market prices. Especially does he need reliable information about the amount and real value of his standing timber and the location of good markets. Farmers' Bulletin 715, which may be had free, contains detailed in- be drawn.—Popular Science Monthly. formation on these points,

BEST TIME TO PRUNE TRANSPLANTED TREES

Early Spring Has Been Most Generally Recommended.

Fear Has Been Expressed That Branches Cut Back in Fall Will Not Dry Out Sufficiently-Results of Missouri Station.

The time to prune transplanted trees, and young trees not to be transplanted, has been much discussed. Early spring has been most generally recommended. It is the usual custom to prune back the branches of young trees when they are transplanted. Some writers have recommended delaying pruning back fall transplanted trees until spring. The precaution often urged against cutting back the branches in the fall is that the tree loses too much moisture through the cut surfaces of the twigs. Fear has been expressed that the cut-back branches will dry out sufficiently to kill back badly during winter. The question naturally arises as to whether more water will be lost through the be transpired from the branches were they left intact.

In order to answer this question for Missouri conditions, which are more or less typical of the central states, general observations have been made on young trees pruned at different seasons at the University of Missouri College of Agriculture in the last twenty years. The results uniformly indicate that better growth results if the branches are cut back in the fall. his own, and can judge his problem by This holds true for young trees generthe condition of the cleared area. In ally, whether they are transplanted in the fall or spring or are not trans

The same observations are true of grapes. A skillful grape propagator and grower at Hermann, Mo., has found that grapes make better growth if pruned back in the fall. This grower sets his cuttings in autumn as soor as the vines shed their leaves and thereby successfully roots Norton Cynthiana and other varieties found to root with difficulty if the cuttings are made and set in early spring. He further says that one-year-old grapes designed to stand a second year in the nursery, make much better growth if pruned back in the fall; also that bearing grape vines make stronger growth if pruned in autumn as soot as their leaves are shed. This is particularly true of varieties that tend to make poor renewal growth from the lower spurs.

That the water content of young apple trees is not greatly affected by fall pruning was established by ex periments in 1900 and 1901 at the University of Missouri. Little difference apple trees transplanted in late fall and those which were not transplanted Also, the trees whose branches were pruned back in late autumn contained on the average, slightly more water than those which retained their great it at least indicates that the pruned branches did not suffer from drying out through the wounds, but that on the contrary the pruned trees dried out slightly less than those which were not pruned.

QUITE SIMPLE POST PULLER

Effective Device Made of Ordinary Pieces of Timber With Chain Attached to Singletree.

This is a very simple post puller. It consists of a 2 by 6-inch timber about 3 feet long, placed in a slanting position against the post which you desire to pull out of the ground. Fasten the chain around the post just above the ground and run it over the plank. The next step is to hitch a singletree to the end of the chain and one horse easily pulls out any ordinary fence post. This device will be found very handy by

With a Piece of Plank, a Chain and a Horse, Fence Posts Are Easily Pulled

farmers repairing their fences or tearing out old ones to replace them by the modern steel or concrete fence posts which have won such great favor among farmers generally. The chain may be quickly attached to any post and the prop put in place. The parts are easily carried to the next post to

TUBERCULOSIS IN HOG HERD

All Affected Animals Should Be Sent to Market for Slaughter Under Federal Inspection.

(Prepared by the United States Department of Agriculture.)
When tuberculosis already exists in a drove of hogs all the affected aniinfected before restocking.

Just a Family Row.

One night about 11 o'clock I was making preparations for bed and heard a peculiar sound at the foot of the stairway. I armed myself with a poker and a flashlight and proceeded to make wounds of the cut twigs than would an attack. As I was rounding the curve of the stairway I flashed the light and found the parrot had gotten out of his cage and was fighting the cat.-Exchange.
