MILLIONS
Suffer from
Acid-Stomach

Millions of people suffer year after year from ailments affecting practically every part of the body. The most common of these ailments can be traced directly to acid-stomach. Here is the reason: poor digestion means poor nourishment of the different organs and tissues of the body. The blood is impoverished—becomes weak, thin, sluggish. Ailments of many kinds spring from such conditions. Biliousness, rheumatism, lumbar back, acetia, general weakness, loss of power and energy, headache, insomnia, nervousness, mental depression—even more serious ailments such as catarrh and cancer of the stomach, intestinal ulcers, cirrhosis of the liver, heart trouble—all of these can often be traced directly to acid-stomach.

Keep a sharp lookout for the first symptoms of acid-stomach—indigestion, heartburn, belching, food repeating, that awful painful bloated after eating, and sour, gassy stomach. EATONIC, the wonderful modern remedy for acid-stomach, is guaranteed to bring quick relief from these stomach ills. Thousands say they never dreamed that anything could bring such speedy relief—and make them feel so much better in every way. Try EATONIC and you, too, will be just as enthusiastic in its praise. Make your life worth living—no aches or pains—no blues or melancholy—no more of that tired, listless feeling. Be well and strong. Get back your physical and mental punch; your vim, vigor and vitality. You will always be weak and ailing as long as you have acid-stomach. So get rid of it now. Take EATONIC Tablets—they taste good—you eat them like a bit of candy. Your druggist has EATONIC—50 cents for a big box. Get a box from him today and you are not satisfied he will refund you money.

EATONIC
(FOR YOUR ACID-STOMACH)

This Large Bottle of **YAGER'S LINIMENT** contains twice as much as the usual 50 cent bottle of liniment and lasts the average family for months. It quickly alleviates pain caused from rheumatism, sciatica, neuralgia, sprains, etc.

Sold by all dealers. Price 35c.

Rocket to Go Up 200 Miles

Device to test highest air regions near completion; may shoot as far as the moon.

A method of sending apparatus to the hitherto unreachd higher layers of the air, to the regions beyond the earth's atmosphere, and even as far as the moon itself, is described by Prof. Robert H. Goddard in a recent publication for the Smithsonian institution.

The new apparatus is a multiple-charge high-efficiency rocket of an entirely new design.

"The great scientific value of Prof. Goddard's experiments," says the announcement, "lies in the possibility of sending recording apparatus to extreme altitudes within the earth's atmosphere.

"The nature of the higher levels of the air has for a long time been a subject of speculation as to their chemical composition, temperature, electrical nature, density, ozone content, etc. The highest level that has ever been reached up to the present time with the recording instruments is about nineteen miles, accomplished with a free balloon.

"As the earth's atmosphere extends some 200 miles out, there is a great unknown region, knowledge of which would greatly benefit the science of meteorology.

"The balloon with its recording apparatus requires several hours to ascend to its highest altitude, drifts horizontally for a considerable period of time, and may come down at a great distance from its starting point. Its recovery by the sender depends on the chance of its descent being noticed and on the willingness of the finder to return it.

"Thus it may be days or weeks before the record taken is made available. On the other hand, the new rocket apparatus would go straight up and come straight down, the whole operation probably consuming less than half an hour. Thus daily observations at any desired altitude for use in weather prediction could be easily taken."

To Build Home Cheaply, Construct From Material To Be Had on the Site

The way to own a home at a minimum of expense is to build it of material already on the site—earth, for instance.

The requisite earth may be had for the digging, and there is nothing to pay for transportation. In England this idea is being taken up, with the expectation that the building of rammed earth dwelling houses on an extensive scale will help importantly to solve the housing problem, bricks being scarce and expensive.

There are in European countries many such buildings that date actually from prehistoric times. In parts of France and Spain this simplest of all methods of house construction has long been practiced, and recently it has been adopted with great success in South Africa and other British colonies.

Planks are set up on edge to form a mold, and the space between is filled with earth, which is then rammed as tight as possible. The ramming, of course, can be done much more advantageously and cheaply by machine; likewise the digging.

If the subsoil be clay, the latter, mixed with straw and "puddled," furnishes a first class material, utilizable in the same way. This is what is called in England "cob building." The birthplace of Sir Walter Raleigh was a cob house, and it is in as good condition as ever today.

OF INTEREST TO POULTRY GROWERS

Old Lady Plymouth Rock is not going to do her best, unless you give her the same kind of care that the Jersey gets.

"The egg supply can be kept up in cold weather by furnishing spring conditions," says the head of the poultry department of a prominent agricultural college.

"These conditions include the factors of housing and feeding. The house for the chickens should be roomy, and furnish plenty of fresh air without drafts. Meat scraps or milk should be fed to take the place of bugs and worms which are so easily found in the summer. Sprouted oats can take the place of grass and other green feeds. Grains should be scattered in straw so that the chickens will get plenty of exercise. Either sweet or sour milk can be fed, but it is not best to change from one to the other."

One of the important things to consider in winter egg production is the early hatch, the same authority believes. The Plymouth Rocks, Rhode Island Reds, Wyandottes, and all of the birds of the American breed should be hatched by the first of April, and Leghorns not later than May first, he says.

Wheat or oats straw is good for nests, and also the floor of the house.

Longest Daily Air Service Between London and Paris

The passenger-carrying airplane has actually arrived. Seated in a luxurious cabin lighted by electricity, says Boys' Life, one can travel at a two-mile-a-minute rate over mountain and sea. The longest daily service is between London and Paris, a two and a half hour trip, which costs \$100. Regular daily schedules are now flown in the United States, France, England, Italy and Germany. The largest of these air liners carry thirty passengers and the cabins are large enough to allow them to move about comfortably. In a few months or years at most we will not turn our heads to see the passenger air liner sweep past.

Small Cone Shaped Asia Minor Hills Transformed by Natives Into Houses

In Asia Minor, south of the Black sea and north of the Taurus mountains, is a region known in former times as Cappadocia, which anciently was a province of the Persian kingdom. It was famous for its horses.

Later the invading Romans found there an agricultural population whose villages looked for defense to formidable fortresses that frowned from nearby hilltops. These the conquerors destroyed.

It is a lofty and rugged plateau, manifestly long ago the scene of tremendous volcanic activity, the burning mountains pouring forth vast quantities of mud, which hardened into rock. It is a phenomenon familiar in many parts of the world. But in the district west and southwest of Mount Argeus erosion by water and weathering has produced an extraordinary result, the whole landscape being thickly sprinkled with small cone shaped hills.

The people of that district use them extensively for domiciliary purposes. It is an easy matter with pickax and shovel to dig out the interior of one of the cones and convert it into a comfortable dwelling. This is done usually in such wise as to leave "floors" intact, some of the larger houses having a door and a door are, of course, provided.

Many of the houses seem to have been occupied since prehistoric times. Some of them are known to have been tenanted by Christian monks in the fourth century, and it is believed by archeologists that the "ant hill dwellings" of Cappadocia were inhabited by the Hittites 3,800 years ago.

Anhinga Plant in Brazil's Rivers Used to Make Paper

In the soft beds of mud that line so many of Brazil's sluggish rivers, the plant anhinga grows so profusely that an estimated total of 100,000 tons could be exported annually. The anhinga is now known as the raw material from which cellulose is obtained for the manufacture of linen paper; but recent experiments show that the fibers may be transformed chemically into an artificial cotton fiber, of structure even superior to that of the genuine article. One mill is now busy with this new work, while efforts are being made to adapt abandoned sugar mills to the process.

THIS AND THAT

Choose right and go ahead. It isn't easy to get along on a short allowance.

A woman's idea of a good complexion is one that will wash. "If" is the most unsatisfactory word in the English language.

A woman's face is her fortune—or perhaps the fortune of her druggist.

Nothing tickles a man more than to be told that he looks like an actor.

Daily Thought.

How many opportunities are missed by our waiting for them to come to us—the positive factor waiting for the negative! Opportunities are less movable than souls and wills. Why not search for them instead of waiting for them to search for us?—The New Success.

Exposure Costs a Million.

Damage done to farm machinery through exposure amounts to \$1,000,000 annually, according to an estimate made by experts at the agricultural college of the University of Wisconsin.

Moro Chieftain Lived to Be Eighty-Three Years Old; Remarkable Age for Tropics

The tombs of some of the Moro chiefs of the Philippines are a curious combination of native ingenuity and civilized finery. An ancient and distinguished Moro chieftain is said to have lived to be 83 years old—a remarkable age for the tropics where men and women mature early and die young, according to American standards. This chieftain, Benguito, was not only a distinguished warrior of a powerful tribe, but also a wise diplomat. He held his tribe under firm control during many turbulent periods. He was usually at peace with the Spaniards when they had control of the islands, but when he occasionally struck, perhaps on the advent of a new Spanish governor-general, he struck hard, and with such savage ferocity and good generalship, followed by a masterly disappearance of the entire tribe into the jungle fastnesses, that the Spaniards, after some show of pursuit, were glad to make a peace treaty and leave Benguito to the management and administration of his own tribal affairs. When the Americans took possession of the Philippines, Benguito with unusual discrimination for a native refused to be led into the Aguinaldo revolution, maintaining a dignified but armed and watchful neutrality, and when he saw clearly, long ahead of the other native chiefs, the rising star of the Americans, he gracefully suggested a coalition or treaty with the United States which nearly took the breath away from the American authorities, some of whom had concluded that the only way to make peace with the Moro was with a Krag rifle.

Benguito's body lay in state for 85 days within his tomb, constructed of bamboo framework, but decorated with white cloth after the Moslem fashion, for he and his tribe were devout Mohammedans. The body of the old chief was placed in a sitting posture.

JUST TO LAUGH

Why He Raved.

Mrs. Myles: "I hear Mrs. Styles has a new hat which cost \$40. Have you heard her rave about it?"
Mrs. Wyles: "No, I haven't; but my husband heard her husband doing considerable raving about it."

A Convincing Alibi.

"You ought to be as rich as Brown."
"I know it, my friend, but you see I'm more liberal with my wife than he is with his."

Drilling Them In.

Wright: "I see by the paper that electrically-driven drills have been invented for surgical operations on the human skull."
Penman: "Do not despair, old man; they'll succeed in making people see your jokes yet."

He Got Whaled.

Jimmie—I put a tack on teacher's chair yesterday.
Willie—Did you? I'll bet he won't sit down in a hurry again.
Jimmie—No; and neither will I.

Satisfactory Evidence.

Mrs. Jones—Did you water the ferns in the drawing room?
Maid—Yes'm.
Don't you hear the water dripping on the carpet?

Too True.

"Pop!"
"Yes, my son."
"Is fifty dollars very much money?"
"It all depends whether you mean when I'm earning it or when your mother is spending it, my boy."

Upraised Arm and Open Palm Meant Soldier Had No Dagger

The military salute so familiar to every soldier and scout dates back to very early days, notes Boys' Life. At first it was not intended in the least to show respect to superiors. The upraised arm with the open palm extended was meant merely to show that the soldier did not carry a dagger in his hand and could not attack if he wanted to. An even more remarkable change has come in the meaning of the custom of retiring backward from the presence of royalty. In very early times men backed away from a king to protect themselves from being kicked.

Cakewalk Really Irish.

Although we usually associate the cakewalk with negroes, says London Answers, the original cake dance was popular in Ireland before the negroes knew it, a cake being awarded to the best dancer.

What Birthmarks Indicate.

According to a French scientist, birthmarks in families not now of good social position indicate that they are of knightly descent, the marks being due to the fact that their predecessors' ancestors wore armor.

CHANGES THIEF TO NORMAL BEING

Court Frees Youth Whose Character Has Been Changed by Operation.

Richmond, Va.—A delicate operator has changed S. Dabney Crenshaw, Jr., former University of Virginia student and son of a high official of a manufacturing concern in Richmond, Va., from a person with criminal instincts to a perfectly normal being. Young Crenshaw was committed to a hospital for the insane after being tried three times at Charlottesville, Va., for robbing the chemical laboratory at the University of Virginia, early in 1917.

A Surgeon Testified That He Considered the Operation Successful.

of a quantity of platinum and then burning the building in an effort to cover the theft.

At each trial the jury failed to agree. The defense was that he was insane at the time of the commission of the crimes, but had since been restored to normal mentality by an operation on his skull.

A New York surgeon testified that he considered the operation eminently successful, as the whole character of the patient had undergone a complete change. When he first examined the college student soon after the latter's arrest in 1917, he said, his pulse was far below normal, his blood pressure never more than 100 and his spinal pressure fully three times what it should have been. The patient showed many abnormal mental symptoms, non-appreciation of the crime he had committed and no affection for his family. The surgeon said that when young Crenshaw was under the knife it was found that the brain was in a diseased condition. Since the operation, the surgeon said, he had not detected any trace of moral lapses or delinquencies.

When the court entered the formal order granting him freedom, Crenshaw leaned over the rail and kissed his mother, who was seated behind him.

ESCAPED CONVICT BLUNDERS

Makes Mistake of Calling at Home of Keeper When He Lost His Way.

New York.—Irving Laven, the convict who escaped from New York city reformatory at New Hampton, made the mistake of calling at the home of Michael Mell, one of the keepers, for directions after he lost his way. He was recaptured and returned to his cell.

For a person of such great haste, Laven proved a slow traveler. He lost his way in the woods and, after eight hours' continual going, was caught one mile from the spot where he cast off his overcoat on the prison lawn and fled.

Emerging from the woods after tramping all night, he saw a light in a house and asked how to go to New York. He was dumfounded when Keeper Mell, off duty, came to the door. Keeper Charles Riker took him back to the institution and the warden called in the guards who were hunting for him. Laven is serving three years for larceny.

Girl Waits 21 Years for Lover in Prison

New York.—Archie Mull was released from prison at Glens Falls, N. Y., after spending 21 years in the role of convict. He was convicted of murder in 1898. Awaiting him on the outside was Miss Stella Grace Howe of Marlboro, Mass., to whom Mull had been engaged prior to his arrest. The two were married at once.

Convict Has Conscience.

Salem, Ore.—Unable longer to resist the gnawings of conscience, Elmer E. Barnard, who escaped from the Oregon state penitentiary here in company with Cecil Griffin and Ray Lindsey on the night of August 2, 1916, walked into Governor Olcott's offices one day recently and informed the executive that he had returned to Salem voluntarily to serve out his maximum term of ten years.

Teamster's Life Saved

"Peterson Ointment Co., Inc. I had a very severe sore on my leg for years. I am a teamster. I tried all medicines and salves, but without success. I tried doctors, but they failed to cure me. I couldn't sleep for many nights from pain. Doctors said I could not live for more than two years. Finally Peterson's Ointment was recommended to me and by its use the sore was entirely healed. Thankfully yours, William Haase, West Park, Ohio, care P. G. Reitz, Box 199."
Peterson says: "I am proud of the above letter and have hundreds of others that tell of wonderful cures of Eczema, Piles and Skin Diseases."
Peterson's Ointment is 25 cents a box. Mail orders filled by Peterson Ointment Co., Buffalo.
