RELIEVES PAIN

GILBERT BROS. & CO., Baltimore, Md.

Picture Given Free—postpaid—no work, no expense. For particulars write St. John Stephenson Co., 2319 M St., Richmond, Va.

FRECKLES OR PIMPLES. Try Dr. Colpepper's cure. If satisfied send \$2. Stoll Co., 1425 Center Street, Milwaukee, Wisconsin.

FRECKLES POSITIVELY REMOVED by an "easy" method. Write for "Freckle Cure" to Dr. J. W. Stoll, 2379 Michigan Avenue, Chicago.

LITTLE PORKERS NEED ATTENTION

Shelter and Good Bedding Essential to Success With Fall-Farrowed Litters.

MANAGEMENT OF BROOD SOWS

If Proper Precautions Are Carefully Observed as Much Profit May Be Realized From Autumn as From Spring Pigs.

Ordinarily the fall crop of pigs is farrowed between the middle of August and the 10th of October. It is highly important that sows be well fed and carefully tended during this time, the care and management of the dams being practically the same as that followed when the spring litters are farrowed. Similarly, fall pigs, after they are weaned, should be treated the same as spring pigs, except that in many parts of the country fall pigs do not have access to green forage crops.

Young Pigs Require Special Attention.

In the northern and colder locations, special attention should be devoted to housing and bedding the porkers, particularly the young pigs. These youngsters should never be allowed to sleep in sheds or pens where they are exposed to rain or snow, nor should they be allowed to lie on damp bedding. Supplying the fall pigs with plenty of dry, bright, clean bedding frequently—once every two or three days if necessary—to keep the nests and beds dry and comfortable is a prerequisite of successful hog management. This point cannot be over-emphasized. The young pigs delight in a warm, dry nest, and the practical hog raiser who caters to this desire is the man who usually is able to make the statement, backed up with actual figures, that there is money in producing pork.

Damp Bedding Is Dangerous.

The great danger which results from allowing the pigs to sleep in damp bedding is that the next morning they go

One of Big Factors With Fall Pigs Is Comfortable Nest.

out into the cold air, often covered with steam, and consequently are likely to contract pneumonia or other serious ailments. Dry bedding, frequent changes of litter, well-built houses, and plenty of feed of the right character are essential where the producer seeks a 100 per cent pig-raising record. Where these conditions are realized, and particularly where the fall pigs are kept dry, sheltered and well fed, it is as profitable to raise autumn porkers as it is to produce spring pigs, despite the common belief to the contrary.

HONEY-DEW HONEY BEE LOSS

Material Contains Much Indigestible Matter Which Fills Intestines of Bees in Winter.

The presence of honey-dew honey caused heavy mortality among bees last winter. Francis Jager, head of the division of bee culture at University Farm, says that honey-dew is gathered by bees mostly from oak trees, but at times from maples, and can be distinguished in the hive by its black color.

"Honey-dew honey," adds the bee division chief, "contains much indigestible material which fills the intestines of bees during their winter confinement, causing a condition called dysentery. To overcome this it is necessary that the beekeeper feed his bees for winter stores at least ten pounds of sugar sirup or white honey after the brood-rearing season. Bees will store this wholesome food in the brood chamber where they will use it first. When they reach the honey-dew honey next spring they will use it for raising brood."

BUTTERMILK-CEMENT PAINT

Formula Given Is Recommended as Having Given Good Satisfaction—Will Turn Water.

The following paint recipe is recommended as having given good satisfaction: Three pounds of cement are added to a gallon of buttermilk and thoroughly mixed. A larger quantity can be made by using the same proportions.

This paint must be applied soon after it is mixed, and stirred frequently; otherwise the cement will settle to the bottom. The paint will dry in about six hours, and turns water effective. It is adapted for outside use and on old weather-beaten surfaces. It does not give a very glossy finish, and should not be used where an especially neat job is desired.

CO-OPERATION AMONG FARMERS IS FAVORED

Saving of \$5,434,000 Was Effected Last Year.

Aim of County Agents to Assist in Determining What Form of Organization Is Most Desirable for Those Interested.

Co-operative farmers' associations in the Northern and Western states, whose organization was promoted by county agents, last year effected a saving to the members of \$5,434,000, according to reports made to the states relations service, United States department of agriculture. The gov-

Farmers at Shoreham, Vt., Unloading Their Wool for Co-Operative Shipping.

erning principle in all activities on the part of county agents sharing in co-operative movements has been not to act as the direct business agent of the farmer or an organized group, but to assist farmers in determining what form of local organization is desirable and to secure expert assistance, when available, in organization methods. The county agent also helps guard the community against overorganization and wherever practicable advocates the use of existing agencies. The co-operative associations which the county agents have helped form have had to do both with production and distribution and include co-operative grain elevators, creameries and live-stock selling associations.

LOOK OUT FOR SMUT IN OATS

Loss This Year Will Run From 5 to 15 Per Cent—Keep Eye on Threshing Machine.

Smut has taken a heavy toll of some oat fields this season. If you don't believe it, examine any field where you find smut and count the number of smutty heads on a square yard or square rod. The loss will surprise you; it will run from 5 to 15 per cent, which is quite an item this season. Compare yields of badly smutted seed, and figure up whether the work of treating the seed was worth while or not. And the essential thing is to remember all of these things when seedling time comes around again. Another thing, look out for threshing machines which must thresh smutty grain.

SECURING STAND OF ALFALFA

Four General Methods Are Outlined, Any of Which May Be Used With Success.

There are four general methods to secure a stand of alfalfa, which are as follows: (1) Seed in the spring with a nurse crop, (2) seed in the spring or early summer without a nurse crop, (3) seed in the late summer following the removal of a summer crop, (4) seed in late summer on summer fallowed land. Any one of the above four methods may be used with success, and each of them, with the possible exception of the second, has some advantages.

A WHITE PINE STAND GROWS 1,000 BOARD FEET A YEAR.

Two acres of white pine, near Keene, N. H., were sold three or four years ago, before the war prices, for \$2,000 on the stump. The total stand was 254 cords, which equals 170,000 board feet, or an average of 85,000 feet per acre. The trees were from 80 to 85 years old; so the growth on each acre was about 1,000 feet per annum and the gross returns about \$12.20 per acre per annum.

CUTTING SILAGE BIG FACTOR

Material of Short Lengths Packs More Compactly and Waste is Much Less When Fed.

The fineness of the material that goes into the silo is an exceedingly important factor in the making of good silage. It costs more to cut the material in short lengths, but it pays in the end, because it packs more compactly in the silo and there is less waste when it is fed.

"LAND OF PLENTY"

Western Canada a Country of Marvelous Fertility.

Literally Hundreds of Miles of Wonderful Grain Fields Delight the Eye—Yields Will Run Well Over a Billion Dollars.

A trip through the wheat fields of Western Canada may lack the inspiration, such as one may find working insidiously through his being as he traverses the mountain areas of Canada, rich in the variety of color and depth of shades that they cast, wonderful in their magnitude, their grandeur, restful, even although the streams that flow from their sides come down with a swish and a swash creating a noise that makes one's eardrums beat their last beat. Then as we rest beside the lakes in the clouds and see the calm and peace which they enjoy in the midst of nestling hills, we wonder if there's another world. Care has vanished; all we want is to dwell upon the scene. But it was not the intention to speak of mountain scenery, roaring torrents, placid lakes, and restful haunts. Rather, we were about to speak of the other kind of inspiration that is aroused as one traverses Western Canada's immense plains, gridironed with railroads and splendid highways, along whose borders and away back are to be seen the most wonderful grain fields. The crops of wheat, oats, barley, flax, and corn—yes, corn—have just been harvested, the threshing machines are busy, the elevators are ready—the thirty and forty thousand-bushel elevators, with three, four, and five and more at nearly every station along the thousand miles of railway that serve this immense new area of agricultural land. There is not a more inspiring sight than these grain fields. They lead one to pause and reflect, get one into a mental arithmetic strain, and the mind wanders as it gathers the great length of figures that represents the Western Canada grain crop of 1920. A pencil and paper are needed, for the value will run into and over a billion dollars. At least, that is what those who profess to keep themselves posted as to values believe.

The wheat crop alone will run over 250,000,000 bushels, and if you figure this at \$2.80 per bushel, the price it is selling at as we write, there you have \$700,000,000 alone. Then there is the oat crop, with a yield of one hecatere to the quantities in bushels, for the threshers are reporting yields of 110 and 120 bushels per acre, where but 80 and 90 bushels were expected, but their value, apart from that of barley and rye and flax, will carry us over the billion dollar mark.

Of course all this means—but we had almost forgotten to speak of the cattle and horses, the sheep and the pigs, the dairy and many other farm products, the increase and production of which this year will bring in many more million dollars—all this means that there will be a rash of buyers to Western Canada this fall, during the winter, and next spring.

A certain amount of satisfaction is derived by those "back home here," whose friends are writing them endorsing the statements that are appearing in the press of wheat yields of thirty, forty, and fifty bushels to the acre; of oats yielding anywhere from sixty to 120 bushels per acre. Districts have not been specially favored. Travel anywhere, eight hundred miles east and west, four hundred miles north and south, and it is the same story, splendid yields, good acreage, excellent prices, easy marketing, but labor a little scarce.—Advertisement.

Feminine Progress.

"Has Gladys Twobble abandoned her plans to enter the movies?"
"Oh, yes, Gladys is now passing through the second stage of soul development."
"Ah!"
"She's thinking seriously of being a slum worker or a missionary. In another year she'll be about ready to marry some likely young fellow who is earning a decent living and settle down to a normal existence in a bungalow."

Important to Mothers

Examine carefully every bottle of CASTORIA, that famous old remedy for infants and children, and see that it bears the Signature of *Dr. J. C. Hathorn* in Use for Over 30 Years. Children Cry for Fletcher's Castoria

Quite Appropriate.

"What have you on hand for tomorrow afternoon?"
"A lot of fresh air kids."

No man ever solves the problem of how to become rich. He wants a few dollars more than he ever gets.

The Modern Girl.

Mrs. William G. McAadoo told at a dinner in Washington a story about the modern girl.
"One of these modern girls," she said, "was praising a new play."
"But," said a young man, coughing—"but isn't it rather—er—rather ultra?"
"Ultra? Not a bit," said the modern girl, as she fixed a cigarette in her long amber tube. "It's a play that any girl could take her mother to."

Watch Cuticura Improve Your Skin.

On rising and retiring gently smear the face with Cuticura Ointment. Wash off Ointment in five minutes with Cuticura Soap and hot water. It is wonderful sometimes what Cuticura will do for poor complexions, dandruff, itching and red rough hands.—Adv.
